# Preface

It was a pleasure to have Artur Yusupov working as my second, both personally and professionally. It is therefore an honour for me to write the preface to the new manual *Build Up Your Chess* with Artur Yusupov.

This new book was created by expanding and improving the original online lessons from the Chess Tigers University. As an honorary member of the Chess Tigers, it has given me great pleasure to see this logical follow-up take concrete form and meet the twin challenges of being both a valuable textbook and a bedside book.

It was in 1994 that I met Artur Yusupov in the semi-finals of the Candidates' cycle in Wijk aan Zee. I managed to come out ahead by 4.5–2.5, but I recognized that Artur harboured great potential, both in his chess knowledge and extensive match experience.

Artur's systematic and professional approach to analysing games was the decisive factor in having him as my second in the World Championship Finals in New York 1995 and Lausanne 1998. His mastery of the methods of the Russian chess school was very helpful in the preparation for the matches, as well as during the matches themselves. It was his idea that I should play the Trompovsky in the last game in Lausanne. I was 3–2 down, but was able to level the match at 3–3 and thus force a play-off.

I am still very grateful for everything that Artur did for me.

Artur's vast experience as a trainer convinced him that there is a considerable need for better tuition for amateurs. Matching the level to the needs of the student is perhaps not too difficult, but the masterstroke is structuring the information in such a way that makes it immediately useful for amateurs. I am naturally enthusiastic about the rich variety of material in this series, which can help beginners become top amateurs.

I wish Artur Yusupov all the best with the publication of the second book in the series *Build Up Your Chess with Artur Yusupov*. Making this work available in English means that even more people who are keen to learn can enjoy it to the full.

World Champion, Viswanathan Anand

# Introduction

During my many years of work as a chess trainer, I have noticed that there are only a few books which are really suitable for most amateur players. Some good books treat individual aspects of the game (middlegame or endgame, tactics or positional play) without paying any real heed to the readers' playing levels. This brought about the idea of working out a teaching programme aimed specifically at a certain playing strength. Such teaching programmes, in a brief form and intended as systematic help for trainers, are common only in Russia, where they are very much welcomed. (One very well known and much valued example is a publication by Golenischev.) I took from it some suggestions as to methodology; I then reviewed them and added new bits to them.

In 2003 I began a 3 year training programme in my chess academy. Three groups were set up according to playing strength: under Elo 1500, under Elo 1800 and under Elo 2100. Each annual stage consisted of 24 teaching modules and 24 tests, plus an end of course test.

This programme was later taken over, in a different form and with some editing changes, in the Chess Tigers University and is still being used there.

The overwhelmingly positive comments of my students encouraged me to rework this programme in the form of a series of books. In doing so, I was able to make use of many evaluations, corrections and suggestions from my students. While I was redrafting, especially the explanations in the solutions, that feedback from my students was very valuable.

This book is the second volume in the English series and aimed at players whose playing level lies between Elo 1500 and 1800. The readers will receive the necessary basic knowledge in 6 different areas of the game – tactics, positional play, strategy, the calculation of variations, the opening and the endgame. This will make it possible for them to cross the barrier of 1800. But stronger players can also benefit from the methodical build-up, since they can close any possible gaps in their chess knowledge and thus be able to construct solid foundations for future success. To make the book entertaining and varied, I have mixed up these different areas, but you can always see from the header to which area any particular chapter belongs.

But at this point I must emphasize that just working with this book does not guarantee a rise in your Elo level. It simply gives you a solid basis for a leap forward in chess ability. You should also play in real tournaments, analyse your own games, play through well annotated games of stronger players and read books on chess (I have included some suggestions at the end of this book).

I have also been concerned with another problem area since I moved to Germany: the role of the trainers in chess education. In Germany there are unfortunately too few qualified trainers. There is also a widespread opinion that a talented chess player does not need a trainer. I do not share that opinion. I believe that many talented German chess players could develop much further, if they had support at the correct time and if they had not left gaps in their learning.

Chess is a complicated sport, which has to be studied for many years. It is hard to imagine any other sport without coaches. (Is there a single athletics club or football club that does not have its trainer?) This manual is intended for many club players who unfortunately receive no support in attempting to master our complicated sport. In a certain sense it is a substitute for a trainer, but only a substitute.

I further believe that many chess lovers, who show great commitment to working with young players in chess clubs, will gain with this series of books (as well as with the programme of the Chess Tigers University) important methodological support and high quality training material

for their chess lessons. The students will certainly profit from the supplementary explanations given by trainers and from lively discussions about the themes in the books.

## How to work with this book

First read through the lessons. **You absolutely must play through all the examples and all the variations on a chess board.**

First think about every diagram position (for at least 5 minutes) and try to find the solutions on your own. On average, you will need 1 to 2 hours per lesson. However, there is no time limit; some students may need more time for specific lessons.

It is important to have a good understanding of the subject.

The second part of the lesson is a test with 12 positions. The stars near the number of each exercise indicate the level of difficulty and, at the same time, the maximum number of points which you can earn for the correct solution with all necessary variations ( $\star = 1$  point). Try to solve the positions without moving the pieces! If you cannot solve the position straight away, you must try for a second time for approximately 10 minutes. This time you may move the pieces. You must look for new ideas.

**On absolutely no account may you get help from a computer!**

Normally you will also need 1 to 2 hours for each test. Try to solve all the exercises. Consider each position as though it were appearing in one of your own games and look for the best continuation possible. It is not the case that you always have to mate or win quickly. It is sometimes enough to suggest a good move. Especially for the lessons on the opening, it is more important for you to reflect on the position, take a decision and then carefully play through a correct idea from the solutions. That will help you better understand the ideas in that opening. Mistakes are part of the learning process!

**It is very important to write down all the necessary variations.** Then you will be better able to compare your solution with that given in the book and you can also see how well you have understood the particular subject. If your score is too low, we recommend that you work through the chapter again. **We also recommend you to play through the solutions, including all the variations, on a chess board.**

Some symbols are used in the book which you will also find in international chess literature in game annotations. You will find an explanation of these symbols on page 4.

This is the point at which I should like to express my gratitude to a large number of people who have supported my work in various ways: World Chess Champion Viswanathan Anand for his preface; my wife Nadja for the design of the book and her help in working through the solutions; my daughter Katja for many corrections to my German; my chess trainer Mark Dvoretsky, from whose training methods I have learned so much; Chess Tigers and Hans-Walter Schmitt for the constructive and productive cooperation; Mike Rosa for correcting some mistakes; Reinhold from Schwerin for his proofreading; and finally to Simeon Oxman and Oleg Aizman, who once again gave us much valuable advice concerning the design of the book.

## Mating combinations

Mating combinations often come as the crown to a successful attack. You must recognize the underlying mating pattern in good time in order to force the win.

The following positions may be considered as exercises and you can try to solve them yourself. It is very important to consider the *active moves*: moves which attack or capture something, moves which create threats of mate or which give check. Try to force your opponents into reacting.

**When calculating variations, priority must be given to forcing lines.**

Try to solve the positions and write down all the necessary variations. If you do not find the winning idea straight away, think for at least 5-10 minutes and look for new possibilities.

If finding the solution is too difficult, then first read the hint before taking another look at the position.

Finally, compare your notes with the solution in the text.

## General endgame principles

Dr Emanuel Lasker, the second World Chess Champion, described ‘the three factors which give the endgame its specific character: **the attacking power of the king, the passed pawn and zugzwang.**’

After a massive exchange of pieces, the character of the game changes. The players become less expansive, no longer looking for pounds but contenting themselves with pennies. The goal becomes the **amassing of small advantages.**

Some important general principles can be formulated for the endgame:

1) **Try to activate your king.** Often the best place for the king is in the centre, so that it can head for either the queenside or the kingside, wherever it is needed.

2) **A sound pawn structure** is very important in the endgame.

**Try to acquire a passed pawn.** It is often a decisive element in the endgame.

**Support your passed pawn.**

3) **Provoké weaknesses** in your opponent’s position and attempt to exploit them.

4) **Limit the activity of your opponent’s pieces.** This strategy often brings your opponent into zugzwang.

5) **Try to find the most active positions for your own pieces.**

**Coordinate your pieces** and turn them into a unified whole.

6) **Try to formulate a good plan** and then carry it out. Systematically improve the positions of your own pieces and pawns or force those of your opponent into poorer positions.

In the next two classical examples we can study these endgame principles through the lens of grandmaster play.

**Diagram 2-1**

**J.Capablanca – F.Yates**

New York 1924

1... $\mathbb{b}6$

If 1... $\mathbb{d}8$ , then 2. $\mathbb{e}2!$ . The king must remain in the centre (Principle 1). After 2... $b6$  there follows 3. $\mathbb{a}4$   $\mathbb{b}8$  4. $\mathbb{hd}1$   $\mathbb{d}7$  5. $\mathbb{d}6$   $\mathbb{x}a4$  6. $\mathbb{xd}8\#$   $\mathbb{xd}8$  7. $\mathbb{x}a4$  b5 8. $\mathbb{c}5$   $\mathbb{d}6$  9. $\mathbb{d}1\pm$  (analysis by Prins).

1. $\mathbb{d}5\mathbb{a}4$   $\mathbb{b}8$  3.0–0–0 b5 4. $\mathbb{c}5$   $\mathbb{b}6$

White now attacks the queenside pawns, in order to provoke a weakness (Principle 3).

5. $\mathbb{a}4!$

5.b4 cxb3 6.cxb3 a5 7.a3 is less precise.

5... $\mathbb{d}5$

Black wants to bring this knight to f6. If 5... $\mathbb{c}6$ , then 6. $\mathbb{d}7\pm$ .

6.b3! cxb3

After 6...b4 there comes 7.a5!  $\mathbb{c}6$  8. $\mathbb{d}3a4\pm$ .

7.cxb3 bxa4 8. $\mathbb{d}3xa4$   $\mathbb{c}6$  9. $\mathbb{d}b2$

The king can be a wonderful defender of a position, since it can control all the squares around itself.

9... $\mathbb{f}6$  10. $\mathbb{d}2$

Doubling rooks on an open file is a natural plan (Principle 6).

**Diagram 2-2**

10...a5?

The pawn on a5 will become weak.

10... $\mathbb{f}7$ , intending  $\mathbb{e}7$ , would be better. Black could also take the chance to bring his king into the centre (Principle 1).

11. $\mathbb{hd}1$   $\mathbb{d}5$  12.g3!

A very clever move. White further improves his own position and prepares e3-e4, by first taking control of the f4-square (Principles 4 and 6).

The immediate 12.e4 fxe4 13. $\mathbb{xe}4$  would not be good, due to 13... $\mathbb{f}4\#$ .

12... $\mathbb{f}7$  13. $\mathbb{d}3$ !

White exploits the opportunity to position his king even more actively (Principle 5).

13... $\mathbb{b}7$  14. $\mathbb{e}5$   $\mathbb{cc}7$  15. $\mathbb{d}4$   $\mathbb{g}7$  16.e4

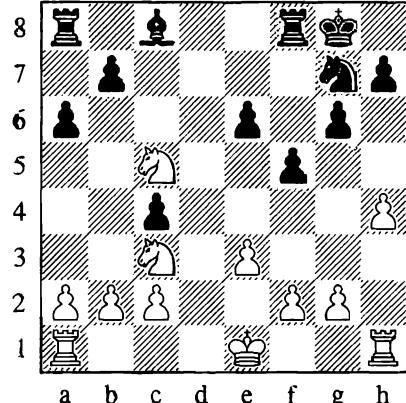

Principle 6).

16...fxe4 17. $\mathbb{xe}4$

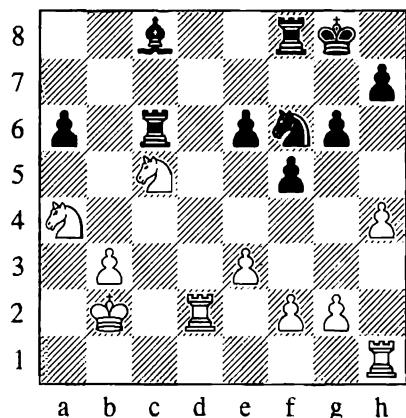

The e6-pawn is a weakness (Principle 3).

17... $\mathbb{b}5$  18. $\mathbb{c}4!\pm$

**Diagram 2-1**

**Diagram 2-2**

## Endgame 1

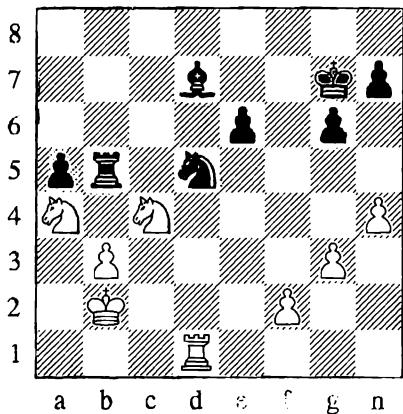

A good technical decision: after the exchange of rooks his opponent does not have so many chances to become active.

**18... $\mathbb{Q}xc4$  19. $\mathbb{Q}xc4$   $\mathbb{Q}d7$**

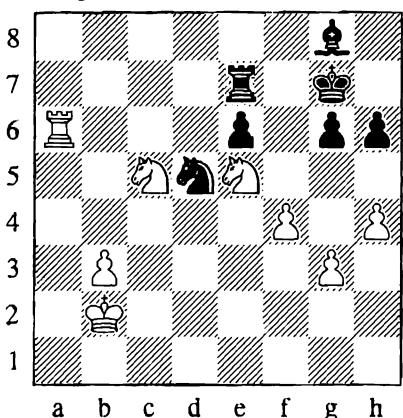

Capablanca now very elegantly exploits the weakness on a5 (Principle 3).

After 19... $\mathbb{Q}b7$  there follows 20. $\mathbb{Q}d6$   $\mathbb{E}b4$  21. $\mathbb{Q}c5+-$ .

**Diagram 2-3**

**Diagram 2-4**

**Diagram 2-3**

**20. $\mathbb{Q}c3!$   $\mathbb{E}c5$  21. $\mathbb{Q}e4$   $\mathbb{E}b5$  22. $\mathbb{Q}ed6!$**

This is even better than 22. $\mathbb{E}a1$   $\mathbb{Q}b6$  23. $\mathbb{Q}xb6$   $\mathbb{E}xb6$  24. $\mathbb{E}xa5$   $\mathbb{Q}c6\pm$ .

**22... $\mathbb{E}c5$  23. $\mathbb{Q}b7$   $\mathbb{E}c7$  24. $\mathbb{Q}bxa5+-$**

Even the technical phase of this game is a delight. See how quietly Capablanca plays. He exploits every possibility to improve his position. He switches play back and forward from the weakness on e6 to the queenside, in order to advance his passed pawn.

**24... $\mathbb{Q}b5$  25. $\mathbb{Q}d6$   $\mathbb{Q}d7$  26. $\mathbb{Q}ac4$   $\mathbb{E}a7$  27. $\mathbb{Q}e4$**

(Principles 5 and 6).

**27...h6 28.f4!**

(Principles 4 and 2).

**28... $\mathbb{Q}e8$  29. $\mathbb{Q}e5$   $\mathbb{E}a8$  30. $\mathbb{E}c1$   $\mathbb{Q}f7$  31. $\mathbb{E}c6$   $\mathbb{Q}g8$  32. $\mathbb{Q}c5$   $\mathbb{E}e8$  33. $\mathbb{E}a6$   $\mathbb{E}e7$**

**Diagram 2-4**

**34. $\mathbb{Q}a3!$**

After White has forced his opponent to defend his e6-pawn, he can set his passed pawn into motion.

The special technique which Capablanca employs here is known as the *Principle of the two weaknesses*. We shall study it in more detail in a later lesson.

**34... $\mathbb{Q}f7$  35.b4**

(Principle 2).

**35... $\mathbb{Q}c7$  36. $\mathbb{E}c6$   $\mathbb{Q}b5\ddagger$**

If 36... $\mathbb{Q}e8?$ , then 37. $\mathbb{E}xc7\ddagger+-$ .

**37. $\mathbb{Q}b2$   $\mathbb{Q}d4$  38. $\mathbb{E}a6$   $\mathbb{Q}e8$  39.g4!  $\mathbb{Q}f6$  40. $\mathbb{Q}e4\ddagger$   $\mathbb{Q}g7$  41. $\mathbb{Q}d6$**

(Principles 5 and 6).

**41... $\mathbb{Q}b5$  42. $\mathbb{E}a5$   $\mathbb{Q}f1$  43. $\mathbb{E}a8!$**

White threatens  $\mathbb{Q}e8\ddagger$ , followed by g5 and  $\mathbb{Q}f1$ . Thus by attacking the king, Capablanca wins another pawn and forces his opponent to exchange rooks.

After the weaker 43.b5, White would have had to reckon with 43... $\mathbb{Q}xb5$ .

**43...g5 44.fxg5 hxg5 45.hxg5  $\mathbb{Q}g2$**

Of course not 53...♜xe8, because of 54.g7+-.

**54.b5 ♜g8 55.g5 ♜f8 56.g7† ♜g8 57.g6**

Having no answer to ♜g4-h6, Black resigned.

**Diagram 2-5**

**Diagram 2-6**

**T.Petrosian – M.Botvinnik**

World Championship, Moscow (5) 1963

White has a microscopically small advantage. He has already posted his king in the centre and has the better and more compact pawn structure (Black has three pawn islands, White has only two!).

**1.♝e2 ♜c6**

If 1...♝d5, then 2.♝e4 ♜d7 3.♝fg5± (or 3.♚d1±). Kasparov recommends 1...h6!? here, removing the possibility of ♜g5.

**2.♚d1 ♜ad8??**

An endgame is often lost not so much on account of a major error, but because a lot of little mistakes are made.

2...♝f7 would be better, protecting the weakness at e6 at once, or simply 2...h6 (Kasparov).

**3.♝xd8 ♜xd8 4.♝g5!**

Black's inaccuracy is immediately punished. Now Black has to defend the e6-pawn with the rook.

**4...♜e8**

4...e5?! would be bad, because the black bishop on e5 becomes passive.

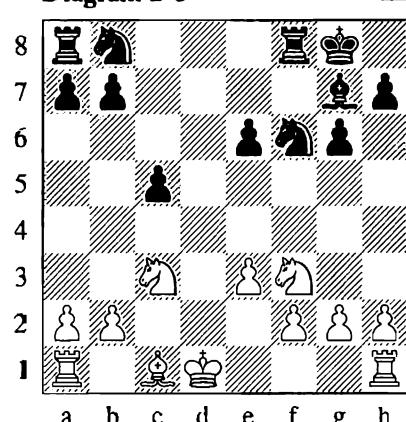

**5.♝ge4 ♜xe4**

5...b6 6.♝xf6† ♜xf6 7.♝e4 ♜e7?! would be a somewhat better defence (Petrosian).

**6.♝xe4 b6 7.♚b1 ♜b4 8.♝d2**

Another good move is 8.a4.

**Diagram 2-6**

**8...Qd5**

After 8...Qxa2 there comes 9.Qa1 Qb4 10.Qxb4 cxb4 11.Qxa7 Qxb2 12.Qb7± (Petrosian).

**9.a4 Qc8 10.b3 Qf8 11.Qc1 Qe7**

11...Qc7 is worse, due to 12.Qg5 (Petrosian).

Black has a weakness – the e6-pawn. But the weakness is hard to get at and White cannot work up a proper attack against it. Petrosian provokes another weakness on the queenside (Principle 3).

Diagram 2-7

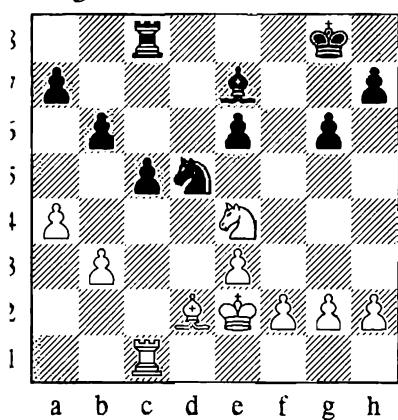

Diagram 2-8

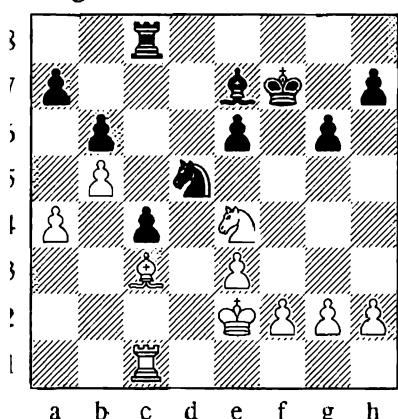

Diagram 2-7

**12.b4! c4**

After 12...Qf7 comes 13.Qc4! h6 14.bxc5 bxc5 15.a5 with the better position (Kasparov).

**13.b5 Qf7**

Black will now have a weakness fixed on c4.

An alternative would be 13...Qa3?! 14.Qc2 c3? (Averbakh) 15.Qxc3±; although if now 15...Qb4? then 16.Qd2 Qc4 17.Qxb4 Qxe4 18.Qd6 Qxa4 19.f3 with advantage for White (Petrosian).

On the other hand, the immediate 13...c3? would not be good, because of 14.Qxc3! and if 14...Qa3 then 15.Qxd5 Qxc1 16.Qe7†+-.

**14.Qc3±**

Diagram 2-8

White has a plan: Qd2, g3, e4 and the strong knight will either be exchanged off or driven away. Then White continues with the attack on the c4-pawn. Black cannot protect the latter with his own king and so he has one less piece for the defence than his opponent has for the attack (Principles 6 and 4).  
14...Qa3 15.Qc2 Qxc3† 16.Qxc3 Qb4 17.Qc2 Qe7?

According to Kasparov, this move is the decisive mistake. Black should try to activate his king (Principle 1). Although White remains better, Black gets good drawing chances in the variation 17...e5 (ΔQe6-d5) 18.Qd2 c3 19.Qe4 Qe6.

**18.Qd2 c3**

Or 18...Qxd2?! 19.Qxd2 Qd8† (weaker is 19...Qd6 20.Qc3 Qc5 21.Qd2) 20.Qc3 Qd1± (Petrosian).

**19.Qe4 Qa5 20.Qd3**

White has enticed the pawn further forward and now Black can no longer protect it.

**20...Qd8† 21.Qc4 Qd1**

After 21...Qd2 there follows simply 22.Qb3!±.

## 22. $\mathbb{Q}xc3 \mathbb{B}h1$

It would be better to head for a rook ending with 22... $\mathbb{Q}xc3\pm$ , as the a5-bishop is now out of the game.

**Diagram 2-9**

## 23. $\mathbb{Q}e4!$

White coordinates and activates his pieces. He even sacrifices his extra pawn to do so (Principle 5).

## 23... $\mathbb{B}xh2$ 24. $\mathbb{Q}d4!$

Principle 1). There is also the threat of  $\mathbb{B}c7\pm$ .

## 24... $\mathbb{Q}d7\Box$ 25. g3

Also good would be 25.g4 h5 26.  $\mathbb{Q}e5$  (but not 25.g5 due to 26...h4) 26...hxg4 27.  $\mathbb{Q}f6\pm$   $\mathbb{Q}e7\Box$   $\mathbb{Q}xg4$   $\mathbb{B}h5\Box$  29.  $\mathbb{Q}e4+-$  (Petrosian).

## 25... $\mathbb{Q}b4$ 26. $\mathbb{Q}e5$ $\mathbb{B}h5\Box$ 27. $\mathbb{Q}f6$ $\mathbb{Q}e7\Box$ 28. $\mathbb{Q}g7$ e5

**Diagram 2-10**

## 29. $\mathbb{B}c6!$

Principle 5).

## 29... $\mathbb{B}h1$ 30. $\mathbb{Q}f7!+$

With the threat of 31.  $\mathbb{B}e6$ .

## 30... $\mathbb{B}a1$ 31. $\mathbb{B}e6$ $\mathbb{Q}d8$

After 31... $\mathbb{Q}b4$  comes 32.  $\mathbb{B}xe5$   $\mathbb{B}xa4$  33.  $\mathbb{Q}f6\Box$   $\mathbb{Q}d6\Box$   $\mathbb{B}d5\Box$   $\mathbb{Q}c7$  35.  $\mathbb{Q}d4+-$ . While if 31... $\mathbb{Q}c5$ , then 32.  $\mathbb{B}xe5$   $\mathbb{B}xa4$  33.  $\mathbb{Q}xc5\Box+-$ .

## 32. $\mathbb{B}d6\Box$ $\mathbb{Q}c8$

But not 32... $\mathbb{Q}c7$ , in view of 33.  $\mathbb{Q}e8+-$ .

## 33. $\mathbb{Q}e8$

The coordinated white forces push the black pieces further back (Principles 4 and 6).

## 33... $\mathbb{Q}c7$ 34. $\mathbb{B}c6$ $\mathbb{B}d1$

Black is forced to recall his only active piece for defensive duties. But he cannot protect all the weak pawns on the kingside.

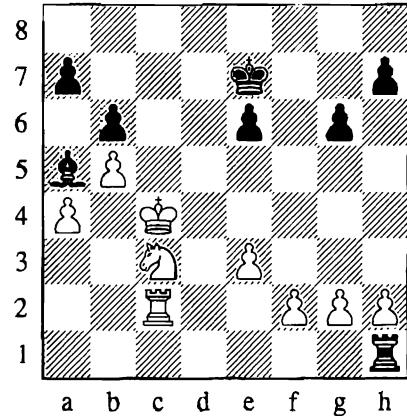

34... $\mathbb{B}xa4$  loses to 35.  $\mathbb{Q}g5$   $\mathbb{Q}b7$  36.  $\mathbb{Q}e6$   $\mathbb{B}b8$  37.  $\mathbb{Q}d8\Box$   $\mathbb{Q}a8$  38.  $\mathbb{Q}c8!$  followed by  $\mathbb{Q}c6$ .

## 35. $\mathbb{Q}g5$ $\mathbb{B}d8\Box$ 36. $\mathbb{Q}f7$ $\mathbb{B}d7\Box$ 37. $\mathbb{Q}g8$

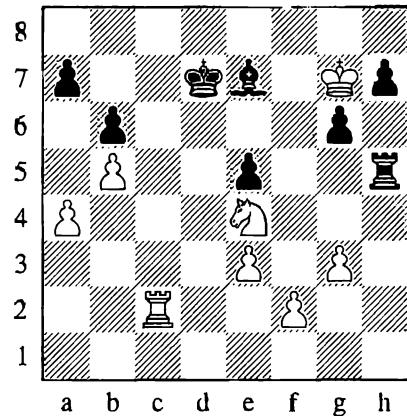

Black resigned, on account of the following variation: 37...h5 38.  $\mathbb{Q}e6$  (38.  $\mathbb{B}xg6$  is also good) 39.  $\mathbb{Q}b7$  39.  $\mathbb{B}xc7\Box$   $\mathbb{B}xc7$  40.  $\mathbb{Q}xc7$   $\mathbb{Q}xc7$  41. f4! exf4 42. exf4  $\mathbb{Q}d6$  43.  $\mathbb{Q}f7+-$ .

The test which follows is very difficult. You should not expect to be able to solve all the problems! Some positions are very demanding. Just try to do your best. You will learn a lot when you then study the solutions carefully.

1.  $\mathbb{Q}d5?$

White can no longer win the game after this careless move! Only 1 consolation point for it!

First the weakness on h5 should be fixed so that the h-pawn cannot get onto a black square.

1. h4! is much better (Principle 3).

J.Plaskett – A.Yusupov

Graz 1981

In such positions the most important thing is the activity of the king (Principle 1). In the game Black immediately endeavoured to activate his king.

1... $\mathbb{Q}c6!$

(2 points)

The king is aiming for a3. A somewhat less precise continuation would be 1... $\mathbb{Q}c4$  2. $\mathbb{Q}f2$   $\mathbb{Q}c6$  (1 point), since White can defend with 3.a4.

2. $\mathbb{Q}f2?$

This natural move is probably a decisive mistake. White really must set up a barrier against the black king and play 2. $\mathbb{Q}b1!$  followed by 3. $\mathbb{Q}c3$ . Then White could still hold the position.

2... $\mathbb{Q}a4!$  3. $\mathbb{Q}e2$   $\mathbb{Q}b5$  4. $\mathbb{Q}d3$   $\mathbb{Q}b4$  5. $\mathbb{Q}c2$   $\mathbb{Q}a3$  ( $\times a2$ ) 6. $\mathbb{Q}b1$   $\mathbb{Q}b5! \dagger$  7. $\mathbb{Q}c1$   $\mathbb{Q}b6$  8. $\mathbb{Q}c2$   $\mathbb{Q}c4!$  ( $\times e3$ ) 9. $\mathbb{Q}f1$

After 9. $\mathbb{Q}xc4 \dagger$   $\mathbb{Q}xc4$  10. $\mathbb{Q}b1$ , Black plays a5-a4 with a decisive advantage.

9... $\mathbb{Q}b2$  10. $\mathbb{Q}g3$

## Combinations involving the back rank

The theme of the weakness of the first (eighth) rank often crops up in games, so the study of these types of mating combinations is particularly profitable.

Typical preconditions for such combinations are:

- 1) **no escape hole** in the castled position;
- 2) **weakness of the back rank**;
- 3) an **open file**, down which the major pieces (the principal actors in these combinations) can function;
- 4) a **far advanced passed pawn**, which may be promoted to a queen.

In combinations involving the back rank, no sacrifices are too great for the attacking side to secure that deadly check on the eighth rank for its major pieces. *Deflection* and the *double attack* are the most important elements in these combinations.

2. $\mathbb{Q}h1$   $\mathbb{W}f2\#$

White resigned, because he cannot defend his back rank: 3. $\mathbb{E}g1$  (or 3. $\mathbb{W}b5$   $\mathbb{E}e1\#$ ) 3... $\mathbb{E}e1\#$ .

Diagram 3-2

B.Gurgenidze – B.Spassky

1.fxg7?

White fails to exploit this good opportunity.

The correct move would be 1.f7!  $\mathbb{E}axf7$  (1... $\mathbb{Q}h8$  loses to 2. $\mathbb{W}d8!!$   $\mathbb{E}xd8$  3.f8 $\mathbb{W}\#$ ) 2. $\mathbb{E}xf7$   $\mathbb{W}xf7$  (2... $\mathbb{E}xf7$  3. $\mathbb{W}d8\#$  leads to mate) 3. $\mathbb{E}xf7$   $\mathbb{Q}xf7$  4. $\mathbb{W}e1$   $\mathbb{E}a8$  5. $\mathbb{W}b1\#$  and White wins.

**1... $\mathbb{E}xf2$  2. $\mathbb{W}d8\#$**

2. $\mathbb{E}xf2$   $\mathbb{E}f7$  3. $\mathbb{W}d8\#$  transposes to the game.

**2... $\mathbb{Q}xg7$  3. $\mathbb{E}xf2$   $\mathbb{E}f7$  4. $\mathbb{E}xf7\#$**

With perpetual check.

We may ask ourselves: 'If combinations involving the back rank are so dangerous, then why don't we make a bolthole in the castled position in good time?'

There are three reasons:

- 1) we are short of time or don't want to waste time;
- 2) a bolthole weakens the castled position;
- 3) we want to bring the rook into the attack via the 3rd rank.

But sometimes we are playing with fire...

**Diagram 3-3**

**A.Yusupov – P. Enders**

German Ch, Bremen 1998

**1... $\mathbb{Q}e4!!$**

## General opening principles

In this chapter we shall examine the most important principles of opening play. Let us first remind ourselves (cf. *Build Up Your Chess with Artur Yusupov I – The Fundamentals*, Chapter 3) of three basic principles of opening play:

The first principle in the opening is **rapid development of all the pieces**.

The second principle is **the struggle for the centre**.

The third principle is **the struggle against your opponent's ideas**, to make it difficult for him to develop and to prevent him from achieving control of the centre.

Black intends ...Qc7, followed by ...a6 and ...b5.

After 6...0–0 White should also castle; he must not play 7.h3? in order to prevent the move Kg4.

Black exploits the time wasted by his opponent by means of a typical pseudo-sacrifice: 7...b5! 8.Qxb5 Qxe4 9.Qxe4 Wa5†.

7.0–0 Qc7 8.a4 a6

The alternative is 8...0–0.

9.Qd2! (ΔQc4) 9...Qd7 10.Qc4! b5

Diagram 4-2

At first glance, Black has achieved a lot. If White retreats, Black will continue with b5-b4 and drive the white knight to a worse position. Black's attack on the queenside is well justified positionally: he wants to seize control of the centre. But he is one tempo short: his king is still in the centre...

11.e5!

Botvinnik opens the game in the centre, in order to exploit the endangered position of Black's king.

11...dxe5

After 11... $\text{b}x\text{c}4$  12. $\text{e}xf6$   $\text{Q}xf6$  (see *The Fundamentals: I, Ex. 3-8*), there follows 13. $\text{Q}h6!$  with an attack.

### 12. $\text{a}xb5!$ $\text{a}xb5?$

12... $\text{Q}xb5$  would be better, although even then White retains the initiative after 13. $\text{Q}xe5$ .

### 13. $\text{Q}xa8$ $\text{W}xa8$ 14. $\text{Q}xe5$ $\text{b}4$

14... $\text{Q}xd5$  would not be good, due to 15. $\text{Q}xd7$   $\text{Q}xd7$  16. $\text{Q}xb5!+$ .

**Diagram 4-3**

### 15. $\text{d}6!$ !

Once more Botvinnik counters in the centre. This is how to treat an attack on the flank!

### 15... $\text{b}xc3$

If 15... $\text{exd}6$  16. $\text{W}xd6$   $\text{b}xc3$ , then 17. $\text{Q}f3!$  (17. $\text{W}xc7$  0-0 18. $\text{Q}xd7$   $\text{Q}xd7$  19. $\text{b}3\pm$  is not so clear) 17... $\text{W}c8$  (17... $\text{W}a6$  loses after 18. $\text{Q}c6!+ -$ ) 18. $\text{Q}xd7$   $\text{Q}xd7$  19. $\text{Q}g5!+ -$  (Botvinnik).

### 16. $\text{d}xc7$ $\text{W}c8$ 17. $\text{Q}f4!$

**Diagram 4-4**

The pawn on  $c7$  will be stronger than the  $b2$ -pawn. Firstly, White can offer it better support and secondly it is attacking the centrally placed black king.

### 17... $\text{c}xb2$

After 17... $\text{W}xc7$  comes 18. $\text{Q}xg6!+ -$ .

### 18. $\text{Q}xd7$ $\text{Q}xd7$

18... $\text{W}xd7$  loses to 19. $\text{Q}b5!+ -$ .

### 19. $\text{Q}b5$ ( $\Delta \text{W}xd7\ddagger!$ ) 19... $\text{Q}d4\Box$ 20. $\text{c}3!+ - \text{e}5$

If 20... $\text{Q}xc3$ , then 21. $\text{W}xd7\ddagger$   $\text{W}xd7$  22. $\text{c}8\text{W}\#$ .

### 21. $\text{c}xd4$ $\text{exf}4$ 22. $\text{Q}xd7\ddagger$

The simplest way to the win.

### 22... $\text{W}xd7$

Or 22... $\text{Q}xd7$  23. $\text{d}xc5\ddagger$   $\text{Q}xc7$  24. $\text{W}d6\ddagger$   $\text{Q}b7$  25. $\text{W}b6\ddagger$   $\text{Q}a8$  26. $\text{W}xb2!+ -$ .

**Diagram 4-5**

### 23. $\text{W}e2\ddagger$

An even better line would be 23. $\text{W}a4!$   $\text{Q}e7$  (or 23... $\text{W}xa4$  24. $\text{c}8\text{W}\ddagger$   $\text{Q}e7$  25. $\text{Q}e1\ddagger!+ -$ ) 24. $\text{Q}e1\ddagger$   $\text{Q}d6$  25. $\text{d}xc5\ddagger$   $\text{Q}xc7$  26. $\text{W}a7\ddagger$   $\text{Q}c6$  27. $\text{W}b6\ddagger$   $\text{Q}d5$  28. $\text{Q}d1\ddagger!+ -$ .

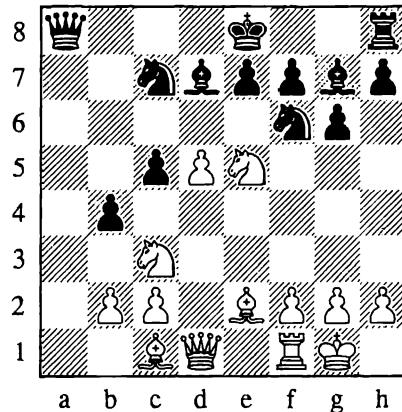

### 23... $\text{Q}f8$ 24. $\text{W}e5!+ - \text{Q}g8$ 25. $\text{Q}b1!$

The simplest.

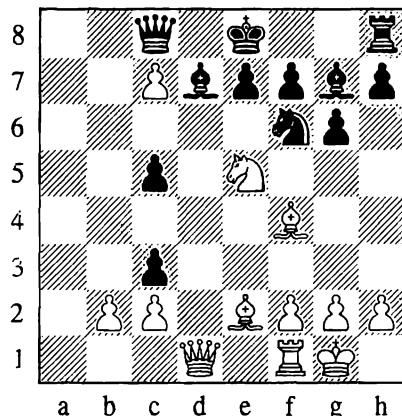

25... $f6$  26. $\text{W}xc5$   $\text{Q}g7$  27. $\text{Q}xb2$   $\text{Q}e8$  28. $\text{Q}b1$   $f3$  29. $gxf3$   $\text{Q}h3$  30. $\text{W}c6$

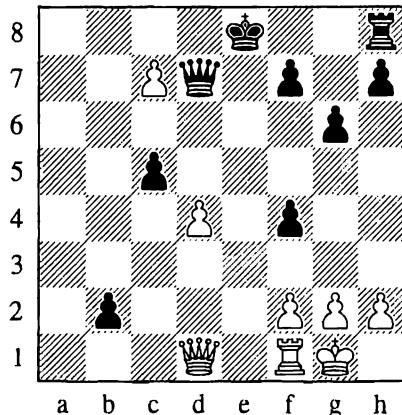

**Diagram 4-3**

**Diagram 4-4**

**Diagram 4-5**

We can now add three more points to our rules for the opening. We must think about **what play will be like in the middlegame**. Masters do not simply bring their pieces into play and then start to wonder what they intend to do with the said pieces. After a few moves they will already be working out a **plan for the approaching middlegame**. If, for example, you want to mount a queenside attack in the middlegame, you should be taking this into account as you develop the rest of your pieces and make your pawn moves.

A second important consideration is **the establishing of the pawn structure**. Achieving a sound pawn structure is very important. The future course of the game often depends on the pawn structure. You should avoid unnecessary weaknesses (e.g. doubled pawns or backward pawns). However, every single situation needs to be evaluated in specific terms: perhaps you will obtain sufficient compensation for the weaknesses (open files, a lead in development, a strong point, etc.).

The players (especially those with the white pieces) should be trying to seize the initiative. **Having the initiative is an advantage!**

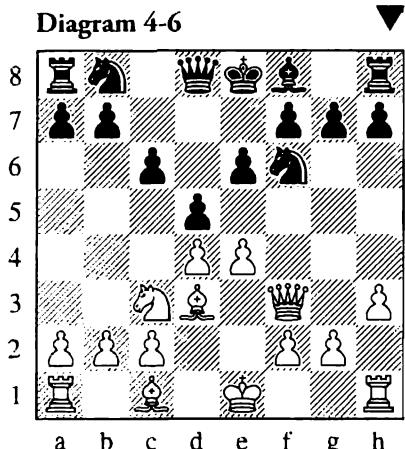

It is often possible to sacrifice one or sometimes even two pawns for the initiative.

### R.Nezhmetdinov – Piotrowkij

USSR 1940

**1.e4 c6 2.Qf3 d5 3.Qc3 Qg4 4.h3 Qxf3 5.Qxf3 e6  
6.d4 Qf6 7.Qd3**

### Diagram 4-6

'White sacrifices a central pawn in order to gain a tempo by attacking the queen and to use the file that has been opened for attacking purposes.' (Y.Neishtadt)

**7...dxe4 8.Qxe4 Qxd4**

**8...Qxe4 9.Qxe4 Qd7 10.c3 Qf6 11.Qe2 Qd6=** is a simple alternative for Black.

**9.Qe3 Qxb2?**

'Too greedy. Black should content himself with a single pawn...' (Y.Neishtadt)

Black loses even more time and opens another file for the opposing rooks. One good alternative would

be 9... $\mathbb{B}b4\#$  10. $\mathbb{Q}e2$   $\mathbb{W}d8\infty$ . Also possible is 9... $\mathbb{W}d8$  10.0–0–0  $\mathbb{Q}bd7\infty$ .

### 10.0–0 $\mathbb{Q}xe4$ 11. $\mathbb{Q}xe4$

11. $\mathbb{W}xe4?$  (intending  $\mathbb{B}ab1$ ) would also be interesting.

### 11... $\mathbb{W}f6$ 12. $\mathbb{W}g3!$

The threat is  $\mathbb{W}c7$ .

### 12... $\mathbb{W}d8$

If 12... $\mathbb{Q}a6$ , then 13. $\mathbb{B}ab1$   $\mathbb{W}e7$  14. $\mathbb{W}f3$  with the threat of  $\mathbb{B}xb7$ .

### 13. $\mathbb{B}fd1$

White develops with tempo and secures a powerful lead in development.

### 13... $\mathbb{W}c8$ 14. $\mathbb{B}ab1$ $\mathbb{Q}d7$ 15. $\mathbb{B}g5$

Another good move would be 15. $\mathbb{B}d4?!$ .

### 15... $\mathbb{Q}f6?!$

Instead, Black should try 15... $h6?!$  16. $\mathbb{B}f4$   $\mathbb{Q}f6$  17. $\mathbb{B}f3$ , although White retains the initiative.

### 16. $\mathbb{Q}xf6$ $gxf6$ 17. $\mathbb{W}f3!$

After 17. $\mathbb{W}c3$   $\mathbb{Q}g7$  18. $\mathbb{B}xb7$  (18. $\mathbb{W}b4$   $f5$ ), there follows 18...0–0!±.

### 17... $f5?$

#### Diagram 4-7

A tactical oversight in a difficult position. 17... $f5?$  was necessary, preparing to castle. After 18. $\mathbb{B}xb7!$  0–0 19. $\mathbb{B}dd7?!$  White starts an attack on the  $f7$ -square.

### 18. $\mathbb{B}xb7!+–$

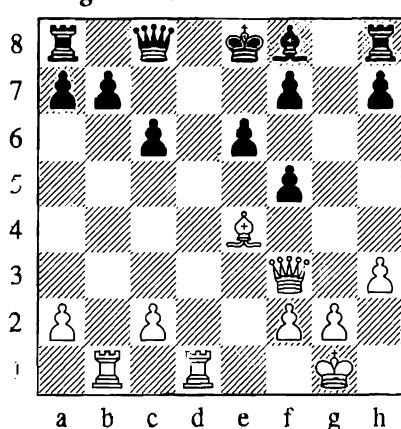

Black resigned, on account of the variation 18... $\mathbb{A}e7$  (18... $fxe4$  19. $\mathbb{W}xf7\#$ ) 19. $\mathbb{B}xc6\#$   $\mathbb{Q}f8$  20. $\mathbb{B}dd7+–$ .

**White's opening goal** can be described as follows: in the shortest possible time he must bring into play the maximum number of pieces, seize the centre, establish a healthy pawn structure, provoke weaknesses in his opponent's camp and take over the initiative.

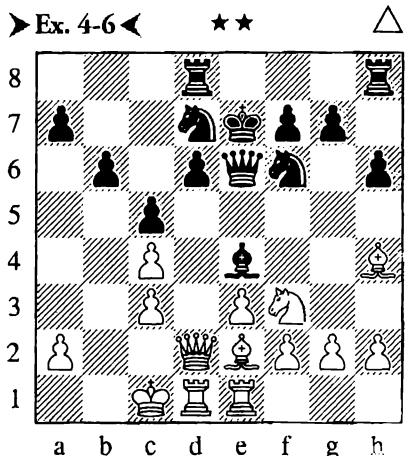

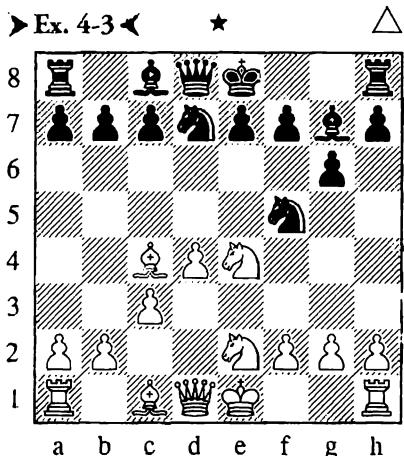

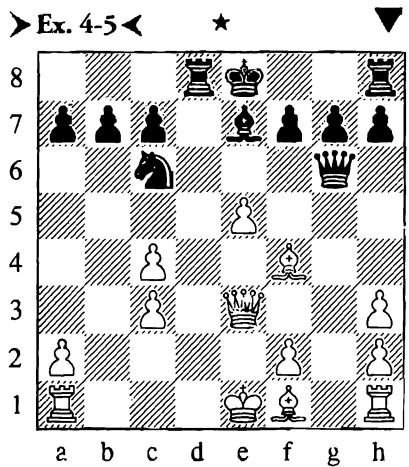

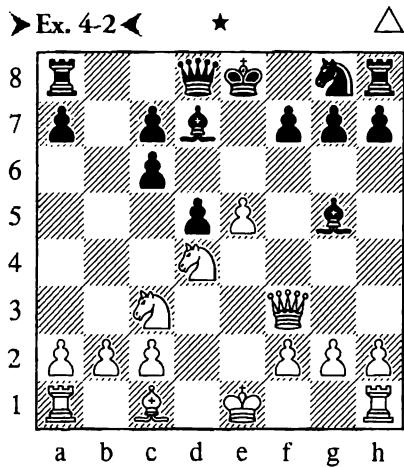

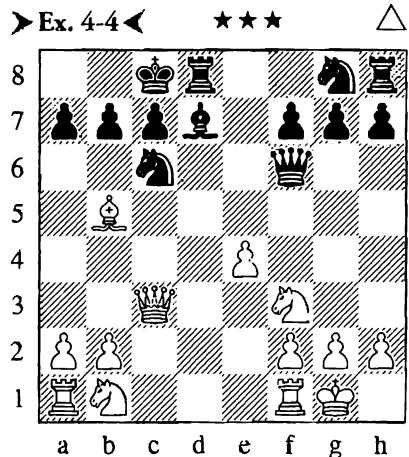

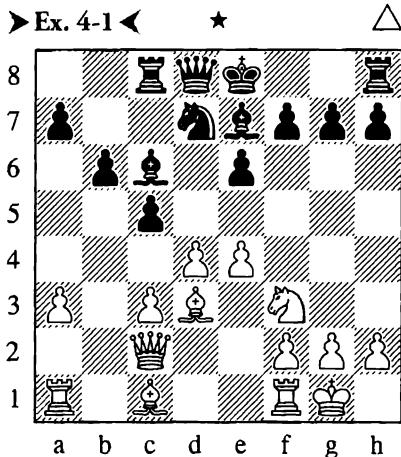

**Black's opening goal** is: develop his pieces rapidly, fend off threats from his opponent, without weakening his own pawn structure, keep a firm eye on the central squares and fight for the initiative.

If your opponent makes a mistake in the opening, you must exploit it with the greatest possible energy. In the test which follows, you must try either to punish your opponent for mistakes in the opening or simply find the best continuation for yourself.

## The double attack

*A move which attacks one or more opposing pieces is called a double attack.*

A double attack is a very important and effective tactic. It often leads immediately to a gain of material, since the opponent cannot meet both threats successfully at the same time.

Even in the first few opening moves there is sometimes the possibility of a double attack.

The discovered attack produces a double attack on the rook and the c2-pawn. White resigned, since after, for example, 3. $\mathbb{E}d3\ bxc2$ , there will be another type of double attack: the rook on b1 is hanging and there is the threat of c1 $\mathbb{W}\dagger$ .

Double attacks are very easy to overlook. Here are two interesting examples.

**Diagram 5-7****Diagram 5-7**

G.Kasparov – G.Ligterink

Malta Olympiad 1980

1. $\mathbb{Q}c8!!$ 

A subtle double attack.

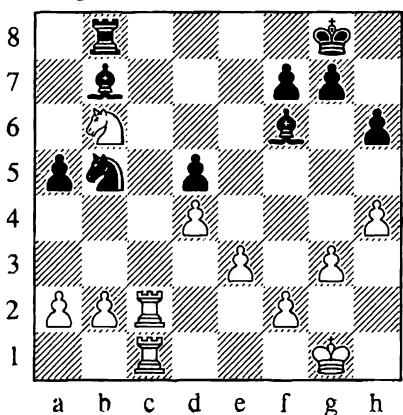

1... $\mathbb{Q}c6$ 

After 1... $\mathbb{E}xc8$  there follows a fresh double attack on c8 and h7: 2. $\mathbb{W}f5+-$ .

1... $\mathbb{E}c7$  would be no better, in view of 2. $\mathbb{E}xb8\ \mathbb{Q}f8$ 3. $\mathbb{Q}xd6!!$  (3. $\mathbb{E}fb1$  also wins) 3... $\mathbb{E}xb8$  4. $\mathbb{Q}c4+-$ .2. $\mathbb{Q}xa7$ Nothing is achieved by 2. $\mathbb{Q}xc6?$  due to 2... $\mathbb{E}xc8$ .2... $\mathbb{Q}xa7$  3. $\mathbb{Q}d5$ 

Black resigned. It was possible to play on with 3... $\mathbb{E}f8$  (3... $\mathbb{Q}f6$  loses to 4. $\mathbb{E}b7$ ) 4. $\mathbb{E}b7\ \mathbb{Q}c8+-$ , but Black's position is still lost.

White could even have played the better 3. $\mathbb{W}f5!!\ g6$  4. $\mathbb{W}d7+-$  and a new double attack decides the game!

**Diagram 5-8****Diagram 5-8**

A.Vyzmanavin – A.Yusupov

Black is worse. Now he misses a good practical chance.

1... $\mathbb{Q}d8?$ 

Instead he should play 1... $\mathbb{E}xd4!!$ . After the stereotyped move 2. $exd4?$  White loses the exchange

to 2... $\mathbb{Q}xd4=!$  Work it out for yourself!

The correct reply would be 2. $\mathbb{Q}d7!$   $\mathbb{E}d8$  3. $\mathbb{Q}c5$   $\mathbb{A}a8$  (or 3... $\mathbb{Q}xc5$  4. $\mathbb{E}xc5\pm$ ) 4.a4  $\mathbb{Q}xc5$  5. $\mathbb{E}xc5$   $\mathbb{Q}d6$  6. $\mathbb{E}xa5\pm$ .

## 2. $\mathbb{Q}d7?$

After this Black was able to turn the game around. White overlooked a decisive combination here: 2. $\mathbb{Q}xd5!$   $\mathbb{Q}xd5$  3. $\mathbb{E}c8+-$ .

It is useful to extend the concept of the *double attack* somewhat. It can also be called a **double attack even if a direct attack is not yet happening, but if the threat of one is being set up.**

## Good and bad bishops

In some chess books the theme ‘Good and bad bishops’ is treated only in conjunction with the pawn structure. But we shall interpret this theme in a somewhat broader fashion.

The bishop is a special piece, it can only access squares of one colour.

*We call a bishop which operates on light squares a light-squared bishop; its colleague is the dark-squared bishop.*

In a game of chess the pieces have a job to do. A passive piece, which also has no prospects of playing an effective role in the game, is a bad piece.

### The good bishop

The bishop is good if **it has points to attack**, or if it controls important squares or diagonals. This is the case when:

- 1) **most of your pawns are properly posted** (on squares which are not of the same colour as that of the bishop) so that they do not restrict its mobility;
- 2) **the bishop is outside of your pawn chain** and able to play an active role.

### The bad bishop

The bishop is bad if:

- 1) **most of your pawns are badly posted** (on squares of the same colour as the bishop) and the bishop is inside your pawn chain;

- 2) **your opponent's pawns limit the mobility of your bishop to a great degree.**

We shall now explain these definitions with the help of some specific examples.

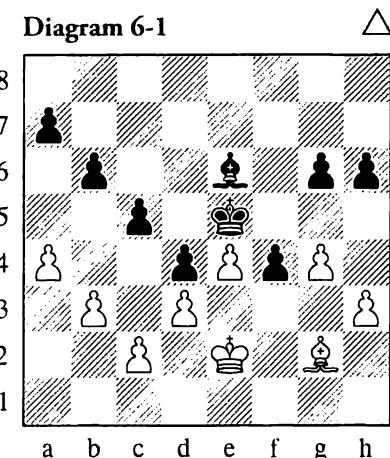

Diagram 6-1

S.Khalilbeili – G.Ravinsky

Kishinev 1951

All the white pawns are badly placed. On the other hand, almost all the black pawns are correctly posted. It is clear that White has a bad and Black a

good bishop. This advantage is even clearer in a pure bishop ending, because the other pieces are no longer involved.

Who has the better bishop?

The white bishop on g2 is not doing any work. It is completely blocked in by the black pawn chain e4-f5-e6. This bishop is bad.

At first glance its counterpart on d7 looks worse, because it is blocked in by its own pawns. But this bishop has some prospects. If Black manages to position the bishop on h5, outside of his pawn chain, it will support the attack on the kingside.

For that reason the black bishop is potentially stronger than the white one.

1-0

It is often necessary to consider whether in the battle against a knight we have a good or a bad bishop.

But the theme of 'knight against bishop' will not be treated until later. What follows are simply the most important guidelines:

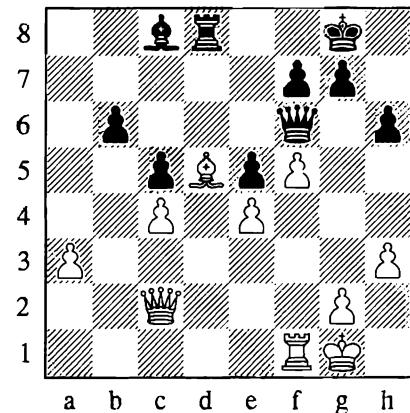

1) **The bishop is stronger in open positions and in play on both flanks.** For example, it can at the same time support its own passed pawn and struggle against an opposing passed pawn.

2) **The knight is better in closed positions, in play on a single flank** and in situations in which its opponent has some pawn weaknesses.

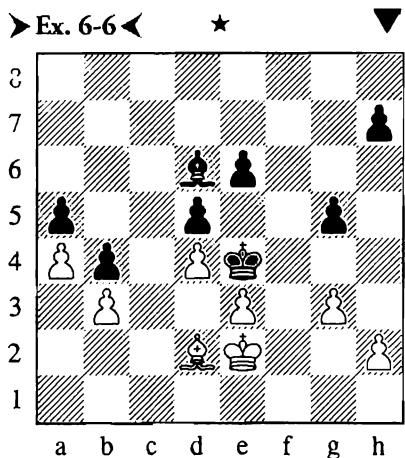

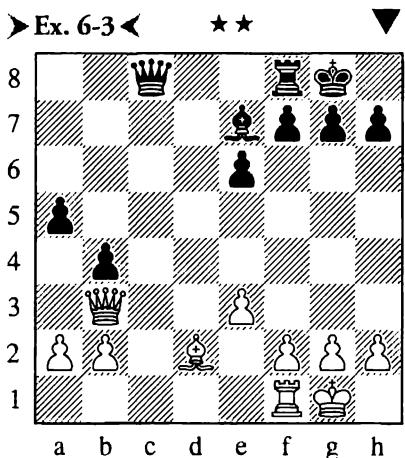

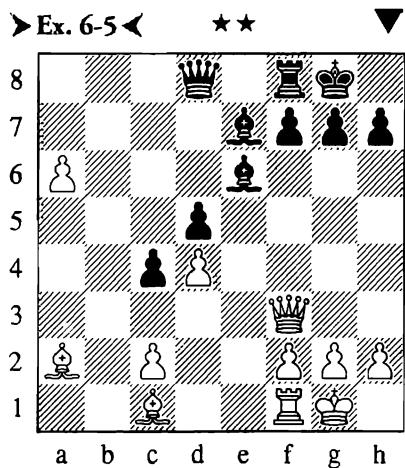

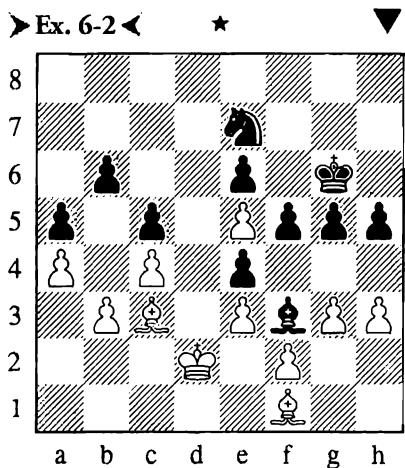

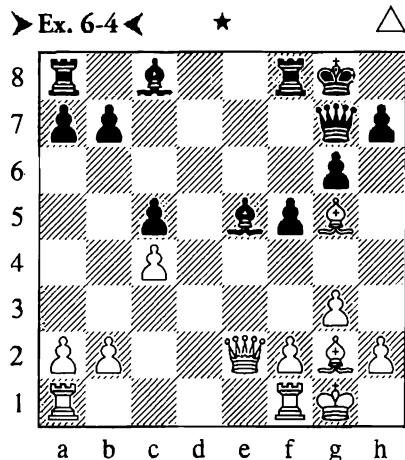

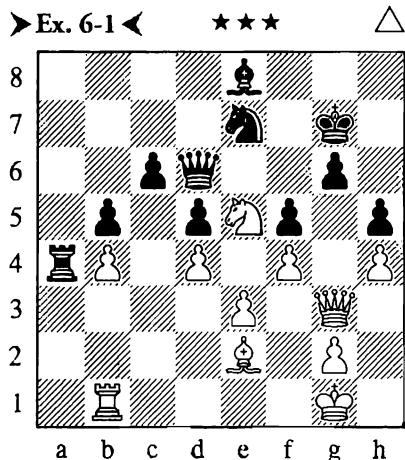

3) **The bishop** is like a sharpshooter, able to operate from a distance. All it needs are **open diagonals**.

4) **The knight** is a hand to hand fighter. It needs to get closer to the enemy. For that it needs **secure outposts**.

## Candidate moves

The basis for the calculation of variations lies in the *candidate moves*. Before we actually calculate concrete variations, we first select some interesting possibilities. **This is how we choose candidate moves.**

Unlike the computer, which takes almost all possibilities into consideration, we limit ourselves to a few possibilities. That is the strength, but at the same time the main weakness of the human way of thinking: if the choice we make is much too small, we can miss the strongest continuation. As was correctly stated by Kotov: 'It is possible to calculate variations in depth accurately, but without having included the most important moves. If we thus exclude from our calculation of variations the best choices, then all the calculations we have made are a useless collection of individual moves and variations.'

To avoid this human failing, we need some guidelines for the calculation of variations.

**1) Accurately calculating over the short distance of the first few moves is more important than the capacity to calculate long variations.**

A mistake in these first moves is more dangerous than a mistake at the end of the variation.

4...d4?! would be better: 5.♛xd4 bxa4 6.♛xc6 ♜b6 7.♛xb4 ♜xb4 8.♛f3±.

**Diagram 7-2****5.  $\mathbb{W}h5!$** 

Threatening  $\mathbb{W}g5\#$ . Black was, of course, hoping for 5.  $\mathbb{W}g4?? \mathbb{Q}xg4$  6.  $\mathbb{Q}h6\# \mathbb{Q}xh6$ , but White finds the better move.

5...  $\mathbb{Q}h8$  6.  $\mathbb{W}g4!$  ( $\times \mathbb{Q}b4$ ) 6...  $\mathbb{Q}xd2\#$  7.  $\mathbb{Q}xd2 \mathbb{E}g8$   
8.  $\mathbb{Q}xa4 \mathbb{Q}xg2$  9.  $\mathbb{Q}e2+-$

White has a decisive positional advantage. The a1-h8 diagonal cannot be protected.

9...  $\mathbb{W}g8$  10.  $\mathbb{Q}g3! \mathbb{W}g6$  11.  $\mathbb{E}ac1 \mathbb{E}e8$  12.  $\mathbb{W}f4$

White doesn't allow his opponent any chance.

12...  $c5$  13.  $\mathbb{Q}f1 \mathbb{Q}xg3$  14.  $\mathbb{Q}xf6\# \mathbb{Q}xf6$  15.  $hxg3 \mathbb{Q}e4$   
16.  $\mathbb{E}h6 \mathbb{W}g7$  17.  $\mathbb{E}d1 \mathbb{E}e5$  18.  $\mathbb{Q}g2 \mathbb{Q}g5$  19.  $\mathbb{E}c6 \mathbb{h}6$   
20.  $\mathbb{E}xh6\#!$

1-0

2) Look not only for your own candidate moves, but also for those of your opponent.

**Diagram 7-3****J. Donner – R. Hübner**

Büsum 1968

In this position Donner thought that his opponent had simply blundered the pawn away. There followed:

**1.  $\mathbb{W}xb4?$** 

Better is 1.  $bxc3$ .

1...  $\mathbb{E}ab8$  2.  $\mathbb{W}xc3 \mathbb{W}b6\#$  3.  $\mathbb{E}c5 \mathbb{E}xc5$  4.  $\mathbb{W}xc5 \mathbb{E}c8!+-$

White had overlooked this move and so he had to resign.

3) The first things you absolutely must consider are **all the active possibilities** (checks, possible captures and attacks).

**Diagram 7-4****L. Lengyel – B. Sliwa**

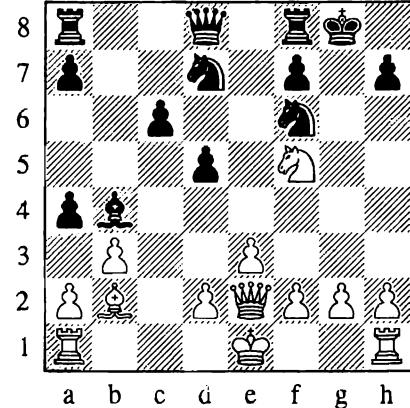

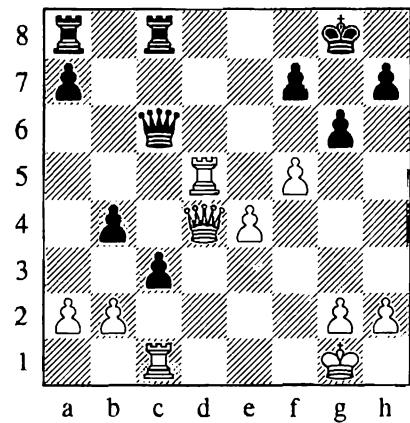

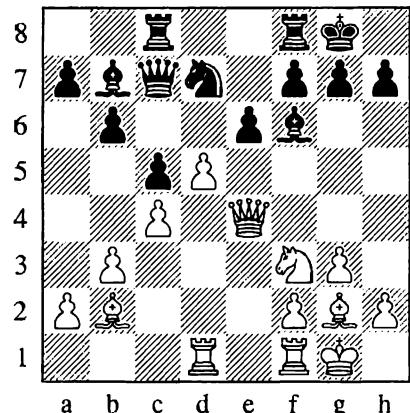

Polanica Zdroj 1966

**1.  $\mathbb{W}c2?!$** 

White unpins the d-pawn.

**1...  $\mathbb{Q}xb2?$** 

1...  $exd5$  2.  $cx d5 \mathbb{Q}xb2$  3.  $d6 \mathbb{W}b8$  4.  $\mathbb{W}xb2\#$  would be a better option for Black.

**Diagram 7-2****Diagram 7-3****Diagram 7-4**

**2.dxe6!**

A strong intermediate move which provokes the following variation.

**2...♝d4?**

Better is 2...fxe6 3.♝g5!±.

**3.exd7 ♜xd7 4.♝xd4 ♜xg2 5.♝f5!**

Once more White finds an active continuation.

**5...♛b7 6.♝d6 ♜f3? 7.♝d3 ♛a8 8.♝xc8 ♜xf1  
9.♝e7† ♜h8**

Presumably, at this point Black had only reckoned on 10.♝xf1. But White finds a much stronger solution.

**Diagram 7-5**

**10.♝d5!+–**

With a hidden threat. If 10.♝xf1, then 10...♛h1† 11.♝e2 ♛e4†=.

**10...g6**

After 10...♝h3 comes 11.♛xh7!!† (of course not 11.♝h5?? ♜g2#) 11...♝xh7 12.♝h5#.

**11.♝xf1+–**

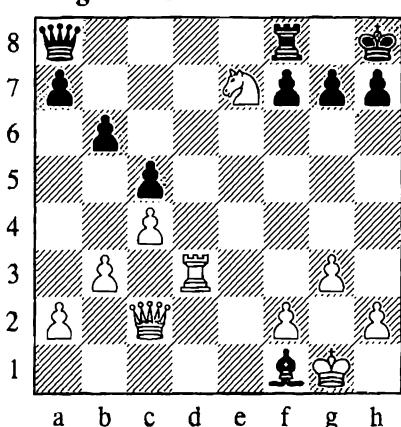

White has won a piece. After a few more moves Black resigned.

**11...♛b7 12.♛e4 ♜g7 13.h4 ♜d8 14.♛e5† f6**

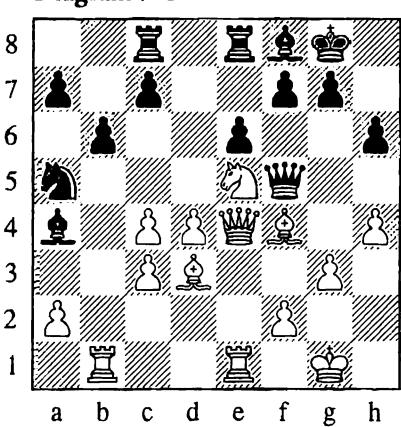

**15.♛e6**

**1–0**

**Diagram 7-5**

**Diagram 7-6**

**Diagram 7-5**

**10.♝d5!+–**

With a hidden threat. If 10.♝xf1, then 10...♛h1† 11.♝e2 ♛e4†=.

**10...g6**

After 10...♝h3 comes 11.♛xh7!!† (of course not 11.♝h5?? ♜g2#) 11...♝xh7 12.♝h5#.

**11.♝xf1+–**

White has won a piece. After a few more moves Black resigned.

**11...♛b7 12.♛e4 ♜g7 13.h4 ♜d8 14.♛e5† f6**

**15.♛e6**

**1–0**

4) If, after some thought, your preferred move still does not lead to a clear result, then before you drown in the sea of variations, it is better to go back and **look for other candidate moves**. There is perhaps a better and simpler solution!

**Diagram 7-6**

**R.Filguth – A.De la Garza**

Mexico 1980

Even if the situation is apparently obvious, it is sometimes worth looking a bit more deeply into things.

**1.♛h1!!**

The obvious solution 1.♛xf5 exf5 2.♝xf5± is a good practical decision. But White finds a much stronger and more beautiful way to the win!

**1...♛f6**

After 1...♛f6 comes 2.g4+–.

Without waiting for his opponent's reply, Black now resigned, faced with the prospect of 2.  $\mathbb{A}g5!$   $hxg5$  3.  $hgx5$   $\mathbb{W}xg5$  4.  $\mathbb{W}h7\#$ .

Try to solve the next difficult position. But if after 10 minutes you have still not found a solution, go back to the starting position and look for new **candidate moves**.

Diagram 7-7

**Lukarelli – Karra**

Bologna 1932

Black has some unpleasant mating threats. The natural defences would lose.

**1.  $\mathbb{E}d2!!$**

A fantastic resource, which brings White a decisive advantage.

1. d4? would be weaker, in view of 1...  $\mathbb{W}e2+-$ . White cannot allow such an attacking formation on the 2nd rank.

However, 1.  $\mathbb{W}xc7?$   $\mathbb{Q}xc7$  2. h7  $\mathbb{A}e5+-$  is no better.

**1...  $\mathbb{E}xd2$  2. d4  $\mathbb{W}e2$**

Now Black's major pieces are badly placed.

If 2...  $\mathbb{A}d6$ , then 3.  $\mathbb{W}f5$   $\mathbb{W}c2$  4.  $\mathbb{A}c1+-$ .

Nor does the tougher move 2...  $\mathbb{E}g2$  save Black, due to 3.  $\mathbb{A}c1+-$  and after 3...  $\mathbb{W}e2$  there follows 4.  $\mathbb{W}c2$ .

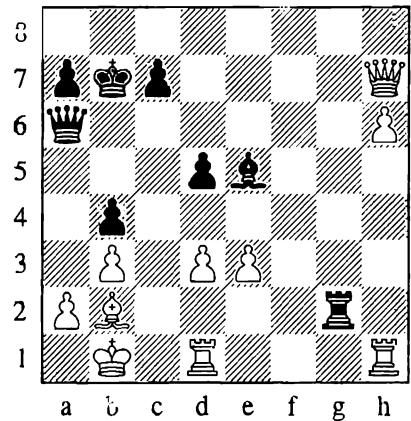

**3.  $\mathbb{A}c1+-$**

**1–0**

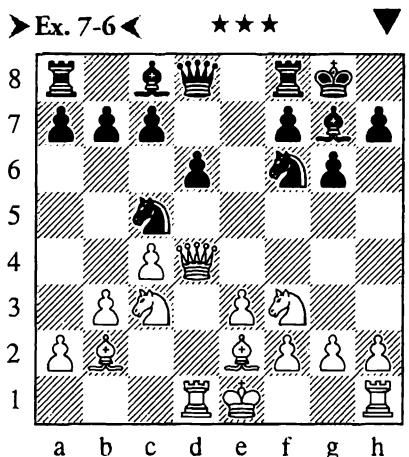

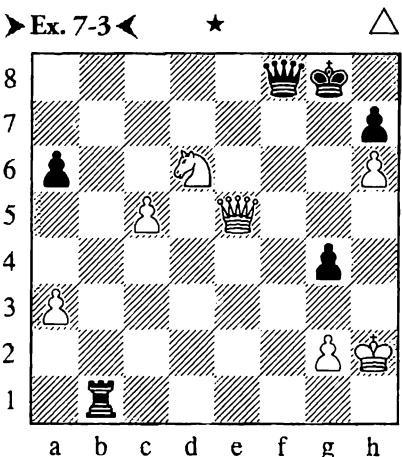

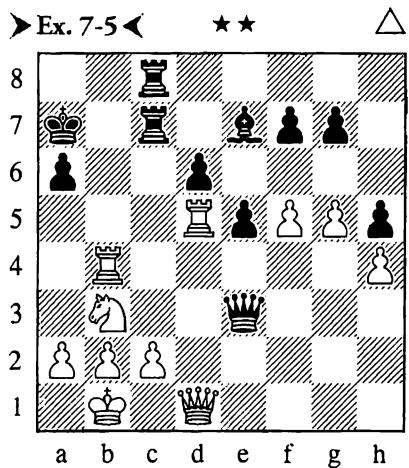

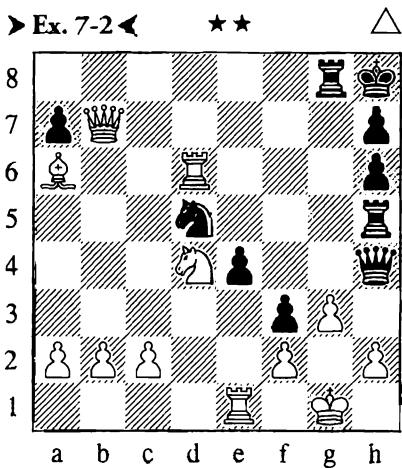

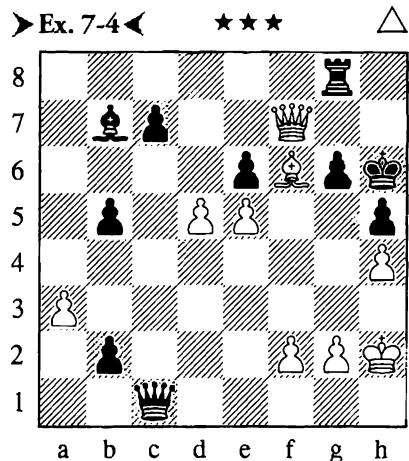

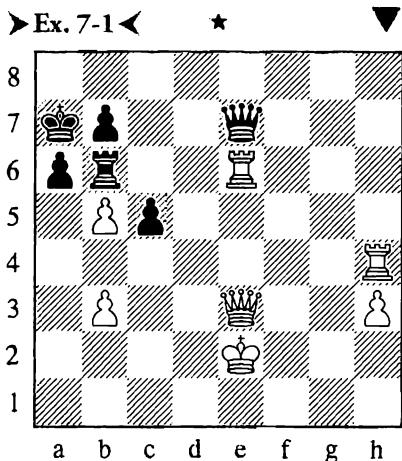

In the test which follows, try first of all to find the candidate moves. But if these continuations do not achieve much, then look for new possibilities in the position. Please do not forget to take into account rules 2 and 3.

In the test positions there is not always an immediate win. It is sufficient for you to try, as you do in your own games, to make the best decision.

## Ex. 7-1

I.Horowitz – N.N.

1... $\mathbb{W}xe6!?$

(1 point)

But in the game Black played:

1... $\mathbb{E}xe6?$

Next came:

2. $\mathbb{B}b6!?$   $\mathbb{Q}xb6$

If 2... $\mathbb{Q}b8$ , then 3. $\mathbb{E}h8!+-$ .

3. $\mathbb{E}h6!+-$

And Black resigned.

## Ex. 7-2

1... $\mathbb{exf}3$  2. $\mathbb{W}g7!?$

## Ex. 7-3

A.Yusupov – R.Kleeschaetzky

German Ch, Altenkirchen 2001

1. $\mathbb{W}g5!?$

White now has a forced win. Here it is important to keep everything under control and to attack with checks!

For example, 1. $\mathbb{W}d5!?$   $\mathbb{Q}h8$  2. $\mathbb{Q}f7!?$   $\mathbb{Q}g8$   
3. $\mathbb{Q}g5!?$   $\mathbb{Q}h8$  4. $\mathbb{W}e5!?$   $\mathbb{Q}g8$  5. $\mathbb{W}e6!?$   $\mathbb{Q}h8$   
6. $\mathbb{W}e4!?$  would be weaker, due to 6... $\mathbb{W}b8!?$ .  
1... $\mathbb{Q}h8$  2. $\mathbb{Q}f7!?$   $\mathbb{W}xf7$  3. $\mathbb{W}d8!?$   $\mathbb{W}g8$  4. $\mathbb{W}f6!?$

## Ex. 7-4

B.Nisman – M.Dvoretsky

Moscow 1972

1. $\mathbb{W}xg8?$  is not good, since Black gives perpetual check: 1... $\mathbb{W}f4!?$  2. $\mathbb{Q}h3$   $\mathbb{W}g4!=?$

In the game, White played:

1. $\mathbb{Q}g5!?$

You only get 1 point for this.

1... $\mathbb{W}xg5$  2. $\mathbb{W}xg5!?$   $\mathbb{Q}xg5$  3. $\mathbb{W}f6!?$

Or here:

a) 3. $\mathbb{g}3$  is met by 3... $\mathbb{Q}h6!?$

b) After 3. $\mathbb{Q}g3$  comes 3... $\mathbb{h}4!?$ , but not 3... $\mathbb{Q}h6?$  in view of 4. $\mathbb{W}xg8$   $\mathbb{b}1\mathbb{W}$  5. $\mathbb{W}h8!?$   $\mathbb{Q}g5$  6. $\mathbb{f}4!?$   $\mathbb{Q}f5$  7. $\mathbb{W}f6!?$   $\mathbb{Q}e4$  8. $\mathbb{W}xg6!+-$ .

c) 3. $\mathbb{f}4!?$   $\mathbb{Q}g4!$  4. $\mathbb{W}f6$   $\mathbb{g}5!$  and the situation is unclear.

3... $\mathbb{Q}h6$  4. $\mathbb{W}f4!?$   $\mathbb{Q}h7$

4... $\mathbb{g}5$  is not so good: 5. $\mathbb{W}f6!?$   $\mathbb{Q}h7$   
6. $\mathbb{W}f7!?$   $\mathbb{Q}h6$  7. $\mathbb{W}xe6!?$   $\mathbb{Q}g6$  8. $\mathbb{W}e8!?$   $\mathbb{Q}h7$   
9. $\mathbb{W}e7!?$  (9. $\mathbb{W}xb5?!$   $\mathbb{Q}b6$ ) 9... $\mathbb{Q}g7$  10. $\mathbb{W}b4!+-$  (Dvoretsky).

4. $\mathbb{W}b4$   $\mathbb{Q}xd5$  5. $\mathbb{W}xb5$   $\mathbb{c}5!$  6. $\mathbb{W}xb2$   $\mathbb{c}4$  7. $\mathbb{Q}g3!?$

And White was happy with the draw.

The correct move would be:

1. $\mathbb{g}3!!+-$

(3 points)

White now threatens  $\mathbb{Q}g5!?$ . Black is soon mated:

a) 1... $\mathbb{b}1\mathbb{W}$  2. $\mathbb{Q}g5!?$   $\mathbb{W}xg5$  3. $\mathbb{hxg}5!?$   $\mathbb{Q}xg5$

Nothing is achieved by 1. $\mathbb{Q}d4 \mathbb{B}a3$  2. $e8\mathbb{W}$   $\mathbb{B}h3\#!!$ . The straightforward move 1. $e8\mathbb{W}$  only leads to stalemate: 1... $\mathbb{B}h3\#!!$  2. $\mathbb{Q}xh3$ . And 1. $e8\mathbb{Q} \mathbb{B}f5=$  is not sufficient.

1... $\mathbb{B}a3$  2. $e8\mathbb{W} \mathbb{B}h3\#$  3. $\mathbb{Q}xh3\#$

Black still has one possible move and must take the bishop.

The game saw:

1... $\mathbb{Q}f4??$  2. $\mathbb{B}xf5\#!!$

Black resigned, due to 2... $\mathbb{Q}xf5$  3. $g4\#$ .

(1 point for spotting this idea)

Black should opt for one of the more sober moves: 1... $\mathbb{Q}e6$  or 1... $\mathbb{Q}h3$ .

## Contents

- ✓ The centre as a strategic factor
- ✓ Important guidelines
  - 1) The pawn centre
  - 2) The strength of pieces in the centre
  - 3) Regrouping pieces via the centre
  - 4) The correct reaction to an attack on the flank

## The centre

In Chapter 4 on ‘General opening principles’ we talked about the role of the centre in a game of chess. But it is impossible to overemphasize that **the centre is the most important strategic factor**. Whoever controls the centre determines the course of the whole game. You must understand that the centre is a strategic commanding height. Generally speaking, only with control of the centre is it possible for an attack to be successful. Exceptions are possible, but they are often only the consequence of a gross blunder by your opponent.

Here are some important guidelines:

1) **It is very advantageous to occupy the centre with pawns.** But the pawn centre requires to be supported at the right moment by pieces and other pawns. Over-extension in the centre without the necessary support can lead to a counterattack against the central pawns.

2) **A piece develops its full force in the centre.** It is especially useful to have central positions for the minor pieces which are well buttressed by pawns. A good example of this is, for example, the game Botvinnik – Kan (see Chapter 6, diagram 6-9).

3) **Whoever controls the centre must try to prepare an attack.** The central squares form the most important lines of communication for the regrouping of pieces.

4) **A flank attack by your opponent must, whenever possible, be met with a counter-offensive in the centre.** An open central file can also be used to exchange major pieces and thus to weaken an attack. In the ideal case, central operations lead to a successful counterattack.

The following sample games will form a very clear illustration of these guidelines.

## L.Forgacs – E.Cohn

St Petersburg 1909

**1.d4 d5 2.Qf3 e6 3.c4 Qf6 4.Qc3 dxс4**

This is of course not a mistake as yet, but now Black must attack the opposing pawn centre with great energy.

**5.Qg5**

Or 5.e4 Qb4 6.Qg5.

**5...Qe7?!**

Black is playing too passively and loses the struggle for the centre. Of course he had better alternatives.

5...c5 or 5...Qb4.

**6.e4**

This is clearly better than the modest 6.e3.

**6...h6?!**

Once again 6...c5 would be better, to keep his opponent occupied in the centre.

**7.Qxf6 Qxf6 8.Qxc4 Qd7 9.0-0 0-0**

### Diagram 8-1

A dream position for White. He has seized the centre and in addition has a lead in development. Now he must attack before his opponent finally develops his pieces and starts any counterplay in the centre.

**10.e5!±**

White seizes more space, pushes back the active black bishop and in addition obtains the important central square e4 for his pieces.

**10...Qe7 11.Qe2 Qe8**

Black prepares the defence Qf8. If he here plays 11...c5?!, intending after 12.d5 exd5 13.Qxd5 to continue 13...Qb6!±, then simply 12.Qad1±.

**12.Qad1 c6**

Black is afraid of d4-d5.

### Diagram 8-2

**13.Qe4!**

The white queen uses the central square on its way to the kingside. White is preparing an attack there.

17... $\mathbb{Q}b4?!$ 

Nor would 17...c5 be any better, on account of 18.d5!. Nevertheless, Black absolutely must attempt to take some action in the centre, but first he must divert the knight. The correct continuation is 17...b5! 18. $\mathbb{Q}d3$  b4 19. $\mathbb{Q}e2$  c5 20. $\mathbb{E}f4$  f6 21.exf6  $\mathbb{Q}xf6$ , although after 22. $\mathbb{E}c1$  White is clearly better. Here 22. $\mathbb{W}xc5$   $\mathbb{W}xc5$  23.dxc5 is less convincing, due to 23...a5± and Black has more chances of a draw.

18. $\mathbb{E}g4$   $\mathbb{Q}xc3$  19.bxc3

But not 19. $\mathbb{W}xh6?$  because of 19... $\mathbb{Q}g6$ .

19... $\mathbb{Q}h8$ 

19...c5? would be too late, due to 20. $\mathbb{W}xh6$   $\mathbb{Q}g6$  21. $\mathbb{E}xg6!$  fxg6 22. $\mathbb{W}xg6$   $\mathbb{W}f7$  23. $\mathbb{W}xf7+ \mathbb{Q}xf7$  24. $\mathbb{Q}g5†+-$  and White gets a third pawn for the exchange.

20. $\mathbb{Q}g5$   $\mathbb{E}e7$ 

Diagram 8-4

21. $\mathbb{Q}e4?!$ 

Once more White exploits the central square e4 to regroup. The knight will reach f6 or d6 with decisive effect.

21... $\mathbb{E}d8?$ 

Black is the epitome of peacefulness. When will he finally counter in the centre?

21...c5! would be more stubborn, although after 22. $\mathbb{Q}f6!$  (stronger than 22. $\mathbb{Q}d6$  cxd4) 22... $\mathbb{Q}g6$  23. $\mathbb{Q}d3$  cxd4 24.cxd4  $\mathbb{E}c8$  25.h3 things look really bad for Black. After 25...gxsf6?? there would come 26. $\mathbb{W}xh6† \mathbb{Q}g8$  27.exf6+-.

22. $\mathbb{E}d3!$ 

White makes use of the time to bring another piece into the attack. Also good would be 22. $\mathbb{Q}f6!$ ?  $\mathbb{Q}g6$  23. $\mathbb{Q}d3+--$ .

22...c5 23. $\mathbb{Q}f6!$ 

The threat is  $\mathbb{W}xh6†$ . White has other possibilities for a successful attack. In such situations it is advisable to chose your path and then to calculate it out quite precisely.

Another good move would be 23. $\mathbb{E}xg7!$  and then:

a) 23... $\mathbb{Q}xe4$  24. $\mathbb{W}xh6† \mathbb{Q}h7$  (or 24... $\mathbb{Q}h7$  25. $\mathbb{E}h3+--$ ) 25. $\mathbb{E}dg3+--$

b) 23... $\mathbb{Q}xg7$  24. $\mathbb{E}h3$  f6 25. $\mathbb{W}xh6† \mathbb{Q}f7$  26. $\mathbb{W}h5+$   $\mathbb{Q}g6$  27. $\mathbb{W}h7† \mathbb{Q}f8$  28. $\mathbb{W}xg6+--$

23... $\mathbb{Q}g6$  24. $\mathbb{E}h3!+-$

And Black resigned, in view of 24...cxd4 25. $\mathbb{W}g5!$   
 $\mathbb{W}xc4$  26. $\mathbb{E}xh6\#$   $\mathbb{W}xh6\#$ .

1.d4  $\mathbb{Q}f6$  2.c4 e6 3. $\mathbb{Q}f3$  d5 4. $\mathbb{Q}c3$   $\mathbb{Q}e7$  5. $\mathbb{Q}g5$  0–0  
6.e3  $\mathbb{Q}e4$

A system worked out by Lasker. Nowadays one first plays 6...h6.

7. $\mathbb{Q}xe7$   $\mathbb{W}xe7$  8. $\mathbb{W}b3$

8. $\mathbb{W}c2$  would be somewhat more precise. Another alternative is 8.cxd5  $\mathbb{Q}xc3$  9.bxc3 exd5 10. $\mathbb{W}b3$   $\mathbb{E}d8$ .

8... $\mathbb{Q}xc3$

8...c6 would be better, followed by f5.

9. $\mathbb{W}xc3$  c6?!

Here 9...dxc4 10. $\mathbb{Q}xc4$  b6, then  $\mathbb{Q}b7$ , would be more logical.

10. $\mathbb{Q}d3$   $\mathbb{Q}d7$  11.0–0 f5

The Stonewall formation cannot be recommended here, since the central square e5 is now difficult to protect.

12. $\mathbb{E}ac1!$  g5?

### Diagram 8-5

This unprepared attack just weakens the black position. White counters at once in the centre.

The lesser evil would be 12... $\mathbb{Q}f6$  13. $\mathbb{Q}e5$   $\mathbb{Q}e4$  (13... $\mathbb{Q}d7$ ?) 14. $\mathbb{W}c2$  and then f3.

13. $\mathbb{Q}d2\pm$   $\mathbb{E}f7?$

13... $\mathbb{Q}f6$  then  $\mathbb{Q}d7$  would be the only sensible way to develop his pieces. But White could then continue with his plan of f3 then e4.

14.f3 e5 15.cxd5 cxd5 16.e4! fxe4 17.fxe4  $\mathbb{E}xf1\#$   
18. $\mathbb{E}xf1$  exd4

19. $\mathbb{W}c7!+-$

Black was hoping for 19. $\mathbb{W}xd4$   $\mathbb{W}c5$  with an exchange of queens. But with the text move Alekhine finds a stronger continuation which paralyses the whole black position.

19... $\mathbb{Q}g7$  20. $\mathbb{E}f5!$  dxe4 21. $\mathbb{Q}xe4$   $\mathbb{W}b4$

Or 21...h6 22.h3, then  $\mathbb{Q}h2$  and  $\mathbb{Q}d6$ .

22. $\mathbb{E}xg5\#$

And Black resigned.

White is preparing an attack on the kingside: g2-g4,  $\mathbb{E}g2$  and then g4-g5. But White does not quite have the situation in the centre under his control. Black, of course, exploits the opportunity for a counterattack.

**1...d5!** 2.exd5 e4 3. $\mathbb{Q}$ xe4  $\mathbb{Q}$ xe4 4. $\mathbb{Q}$ xe4?

White had a better way to sacrifice the exchange:

4. $\mathbb{W}xe4$   $\mathbb{Q}c5$  5. $\mathbb{W}h4\#$ .

**4...h4!**

Provokes the decisive weakening of White's castled position.

**5.g3  $\mathbb{Q}xd5! \rightarrow$  6. $\mathbb{E}xd5$   $\mathbb{W}xd5$  7. $\mathbb{E}f4$**

In the test which follows, you should try either to exploit the central position of the pieces (or pawns) or to find some useful operation in the centre.

(3 points)

Intending  $\mathbb{Q}d5$  followed by  $\mathbb{E}c7$  – an idea of genius from Rubinstein. The black king is relatively safe on d5 and it frees the rook from tedious defensive duties. For other king moves to f7, g7 or f5 you get 1 consolation point.

1.  $\mathbb{Q}e5!$

(2 points)

The correct central move, intending f3 then  $\mathbb{Q}g3$  or  $\mathbb{Q}h4$ .

However, it is hard to prove that the game move is better than a sensible move such as 1. b5! or even 1.  $\mathbb{Q}d3\?!$  f5 2.  $\mathbb{Q}e5$  (2.b5  $\mathbb{Q}d7$  3.  $\mathbb{Q}c4$  a5=) 2...  $\mathbb{Q}c6$  3.  $\mathbb{Q}xe4$   $\mathbb{Q}xe5$  4.  $\mathbb{Q}xb7$   $\mathbb{E}xb7$  5. b5±. A.Kotov – W.Unzicker

Saltsjobaden 1952

1.e5!

(2 points)

1.  $\mathbb{Q}f5$  (1 point) would not be so strong, because of 1...  $\mathbb{Q}d6$ . But 1.  $\mathbb{Q}f4\uparrow$  (also 1 point) is worth considering.

With the move 1.e5! White deprives the black knights of some squares and in addition obtains the important e4-square for future regrouping.

1...  $\mathbb{Q}e6$  2.  $\mathbb{B}e4$   $\mathbb{Q}f8$  3.  $\mathbb{Q}f5$   $\mathbb{Q}h8$ ?

The decisive mistake. Nor would 3...  $\mathbb{Q}g6?$  be any better, due to 4.  $\mathbb{Q}xh6\uparrow$ –. He had to play 3...  $\mathbb{B}c7$  to defend f7.

## The pin and the discovered attack

*The pin* is one of the most important tactical and strategic motifs. It is often an important component in tactical operations. A pin often leads to an advantage in material.

Diagram 9-1

P.Keres – A.Saidy

Tel Aviv Olympiad 1964

1.  $\mathbb{Q}xc6!$   $\mathbb{Q}xc6$  2.  $\mathbb{Q}xf6$   $\mathbb{Q}xf6$  3. d5+–

And White has won two pieces for a rook.

But the pin can also lead to a positional advantage (e.g. the weakening of a castled position). It hampers the defence and forces important pieces into passivity. **You must try to react to a pin as soon as possible**, or even try to avoid being pinned. (See, for example, Exercise 10 in Chapter 4.)

Diagram 9-2

A.Yusupov – G.Schebler

In this position the pin on the f6-knight is very unpleasant.

1.  $\mathbb{W}f4!$   $\mathbb{Q}e5$  2.  $\mathbb{Q}d3$

2.  $\mathbb{Q}g4!$ ? would also be good.

2...  $\mathbb{Q}h5!$

If 2...  $\mathbb{Q}xd5$ , then 3.  $\mathbb{W}xe5+–$ .

3.  $\mathbb{Q}xd8$

Even better is 3.  $\mathbb{W}xe5$   $\mathbb{W}c7$  4.  $\mathbb{Q}d8!$  (another move which works is 4.  $\mathbb{Q}xc5!$   $\mathbb{Q}xc5$  5.  $\mathbb{W}e7±$ ; but nothing is achieved by 4.  $\mathbb{W}e7$  due to 4...  $\mathbb{Q}f8$ ) 4...  $\mathbb{Q}xd8$  5.  $\mathbb{W}g5+–$ .

3...  $\mathbb{Q}xf4$  4.  $\mathbb{Q}xf4$

Or 4.  $\mathbb{Q}xe5$   $\mathbb{Q}xe5$  5.  $\mathbb{W}e7$   $\mathbb{Q}f8±$ .

## The pin and the discovered attack

## Zugzwang

As we already know, zugzwang is a situation on the board in which any move you make worsens your own position.

Zugzwang is a very important element in the endgame. There is almost no pawn ending in which zugzwang does not play a part. *The opposition, triangulation, mined or corresponding squares* are the best known examples. But in other endings too, zugzwang frequently plays its part.

Those positions in which there is a *mutual zugzwang* are of particular interest.

Diagram 10-1

### Example 1

A well-known situation in which the squares f4 and d3 are mined. You must first force your opponent onto one of the mined squares.

**1. ♕f5!**

With Black to play, 1... ♕d2! 2. ♕f4 ♕d3○+ leads to the same zugzwang position, but with White on the move!

**1... ♕d3 2. ♕f4○+**

And now Black must move!

Diagram 10-2

G.Kasparian

1961

**1. ♕xh6!**

White's only path to salvation is by means of this bold blow.

1.h4? would be bad: 1... ♕d4 (also good is 1... ♕h8+ 2. ♕xh8 ♕xg6 3. ♕g8 h5+) 2.h5 ♕g5+.

**1... ♕h8† 2. ♕h7 ♕f7**

**Diagram 10-3****3.h3!**

White uses his reserve tempo to bring about the critical position with mutual zugzwang, but with his opponent to move.

It is often very useful to have some pawns left in their starting positions so that later on you have the **choice between moving them one square forward or two**.

3.h4? loses to 3... $\mathbb{Q}f6$  4.h5  $\mathbb{Q}f7\ominus+$ .

**3... $\mathbb{Q}f6$  4.h4  $\mathbb{Q}f7$  5.h5 $\ominus$** 

The critical position of mutual zugzwang. With White to move, Black would win. But Black cannot wait and has to move.

**Diagram 10-4****5... $\mathbb{Q}f6$  stalemate**

Here are some of the important characteristics in a position which can lead to zugzwang:

- 1) **the pieces are immobile;**
- 2) **the pieces and pawns are in their best possible positions and any changes will be for the worse;**
- 3) **the pieces are fulfilling several tasks at the same time.**

**Diagram 10-5****Example 2**

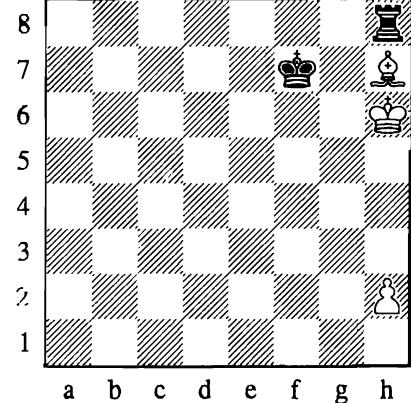

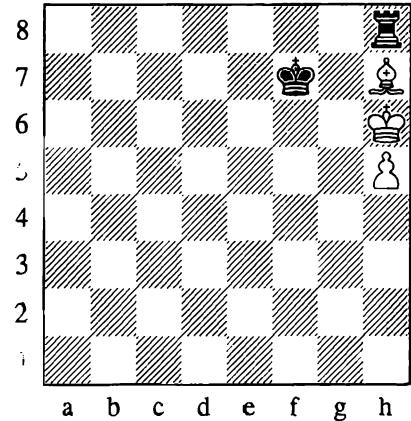

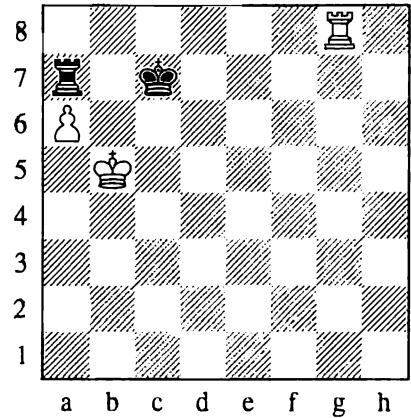

The black rook cannot move. The king has to protect the b6-square. Since Black does not have a waiting move, White has an easy win by zugzwang.

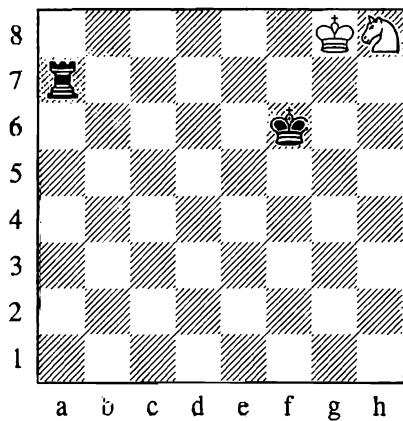

**1. $\mathbb{E}h8\ominus$** 

Or 1. $\mathbb{E}f8\ominus$ . But 1. $\mathbb{E}g7\uparrow$   $\mathbb{Q}b8$  2. $\mathbb{E}g8\uparrow$   $\mathbb{Q}c7$  just repeats the position.

**1... $\mathbb{Q}d6$** 

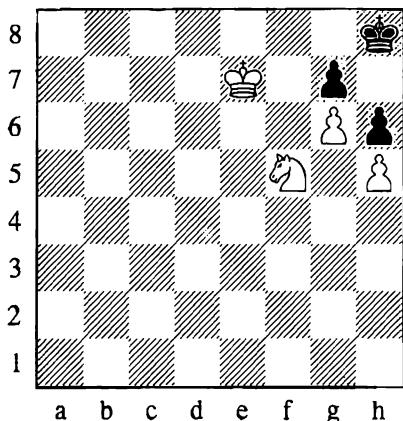

Or 1... $\mathbb{Q}d7$  2. $\mathbb{E}h7\uparrow+-$ .

**2. $\mathbb{Q}b6$   $\mathbb{E}f7$  3.a7+-****Diagram 10-3****Diagram 10-4****Diagram 10-5**

**Diagram 10-6****Diagram 10-6****Example 3**

Here too, it is easy to recognize the zugzwang situation: the white knight is in the corner and can hardly move. After Black's simple waiting move, White's defence falls apart.

1... $\mathbb{E}b7\ominus$ —+ 2. $\mathbb{Q}f8$   $\mathbb{E}b8\#$

**Diagram 10-7****Diagram 10-7****Example 4**

The black fortress cannot be stormed as easily as it would appear – because of some stalemate possibilities.

1. $\mathbb{Q}g3$

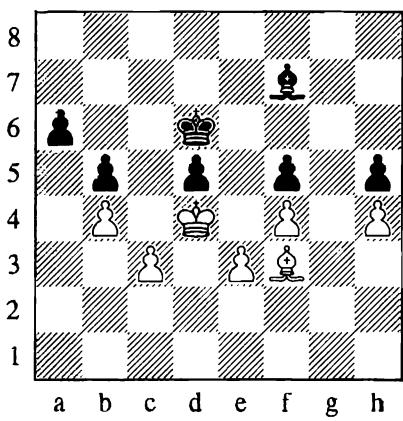

The knight sacrifice 1. $\mathbb{Q}xg7??$  is bad: 1... $\mathbb{Q}xg7$  2. $\mathbb{Q}e6$   $\mathbb{Q}g8$  3. $\mathbb{Q}f6$   $\mathbb{Q}f8$  4. $g7\ddagger$   $\mathbb{Q}g8$  5. $\mathbb{Q}g6$  stalemate.

No better is 1. $\mathbb{Q}xh6??$   $gxh6$  2. $\mathbb{Q}f6$  (2. $\mathbb{Q}f8=$ ) 2... $\mathbb{Q}g8$  3. $g7$   $\mathbb{Q}h7$  4. $\mathbb{Q}f7$  stalemate.

1... $\mathbb{Q}g8$  2. $\mathbb{Q}e4$   $\mathbb{Q}h8$  3. $\mathbb{Q}f6\ominus$

**The most important weapon for use against a fortress is zugzwang!**

3... $gxh6$  4. $\mathbb{Q}f7+-$

**Diagram 10-8****Diagram 10-8****Y.Averbakh**

1954

The black king is controlling the c5- and e5-squares and may not leave its post. The bishop is clearly overloaded and even has to defend three weaknesses: h5, f5 and d5. This is a zugzwang situation. The relationship between the squares f3 and f7 is obvious: they are corresponding squares. In order to win White must bring about the same position with Black to move.

**1. Kg2**

This is not the only route to victory, but it is the shortest.

**1... Kg8**

If 1... Kg6, then 2. Qd3 Qh7 3. Kf1 (also good is 3. Kb1 Kg6 4. Qc2 Qh7 5. Kb3 Kg8 6. Qd1 Kf7 7. Kf3#) 3... Kg6 (or 3... Kg8 4. Ke2 Kf7 5. Kf3#+-) 4. Qg2 Kf7 5. Kf3#+-.

**2. Qd3 Kg6**

If 2... Qd7, then 3. Qc2 Qe6 4. Qd1 Kf7 5. Qf3#+-.

**3. Qc2 Qh7 4. Kb3! Kg8 5. Qd1 Kf7 6. Qf3#+-**

It is not always easy to spot a zugzwang position. For that reason in the endgame you should ask yourself frequently ‘What would/could my opponent play if it were his move?’

**Diagram 10-9****Philidor**

1777

Black has set up an optimal defensive position for his pieces. So this is a typical zugzwang situation. In order to win from this important theoretical position, White must arrange for his opponent to have the move in the same position!

**1. We5†**

1. Wa6?! Ec7† 2. Kb6?? achieves nothing, due to 2... Ec6†!=.

**1... Kb8**

1... Ka7 2. Wa1† Kb8 3. Wa5# leads to the same zugzwang.

1... Kc8 loses at once to 2. We8#.

**2. Wa1†! Kb8**

If 2... Ea7, then 3. Wh8#.

**3. Wa5#**

White has achieved his goal. Black is in zugzwang and must separate his rook from his king. White will soon win the rook.

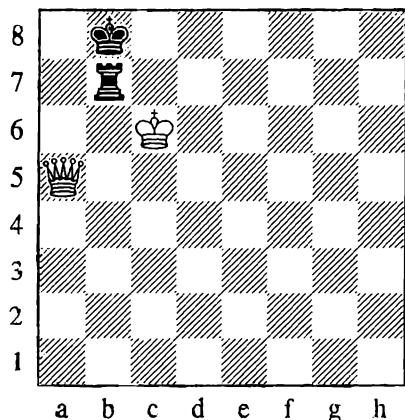

**3... Eb1**

Other moves also lose quickly:

a) 3... Ee7 4. Wd8†+-

b) 3... Eg7 4. We5†+-

## Deflection

*Deflection* is a typical tactical procedure which frequently occurs in praxis. A **defending piece**, which is fulfilling important defensive tasks, is deflected from its work in defence. A deflection is frequently part of a mating combination

Diagram 11-1

N.N. – M. Lazarevic

1972

Black finds an elegant way to mate.

1... $\mathbb{E}g8\#$ ! 2. $\mathbb{Q}h6$

If 2. $\mathbb{Q}h4$ , then 2... $\mathbb{W}xh2\#$ .

2... $\mathbb{W}xh2\#$  3. $\mathbb{Q}h5$

There is only the white queen protecting the vital g6-square. Black makes an offer which her opponent cannot refuse...

3... $\mathbb{W}d2\#$ !

White resigned, in view of 4. $\mathbb{W}xd2$   $\mathbb{E}g6\#$ .

Diagram 11-2

Silberstein – Wersov

1969

Black attacks.

1... $\mathbb{W}h2\#$  2. $\mathbb{Q}g4$   $\mathbb{B}\#$  3. $\mathbb{Q}g5$

The white queen is now deflected from the defence of the e3-square.

3... $\mathbb{W}xg2\#$ ! 4. $\mathbb{W}xg2$   $\mathbb{Q}e3\#$

**Diagram 11-3**

Variation from the game

**E.Geller – M.Tal**

Moscow 1975

The attack in this position is similar.

1... $\mathbb{W}g1\uparrow$  2. $\mathbb{B}g3$   $\mathbb{W}f2\uparrow$  3. $\mathbb{B}g4$   $\mathbb{W}xg2\uparrow$  4. $\mathbb{B}g3$ Not 4. $\mathbb{B}h4$ , due to 4... $\mathbb{B}f2\uparrow$ –.4... $h5\uparrow$  5. $\mathbb{B}h4$ Nor are other moves any better: 5. $\mathbb{B}f4$   $\mathbb{B}e5\uparrow$ – or 5. $\mathbb{B}g5$   $\mathbb{W}xg3\uparrow$ –.

Without the white queen on e7, the black bishop could deliver mate...

5... $\mathbb{W}e4\uparrow$ ! 6. $\mathbb{W}xe4$   $\mathbb{B}f6\#$ 

There is one important characteristic of these positions: **the defensive piece is clearly overloaded, because it is protecting more than one point.**

**Diagram 11-4****Vischniackij – Perevoznikov**

USSR 1950

The black queen is defending the g7-pawn and the d8-square. There followed:

1. $\mathbb{B}d8\uparrow$ !  $\mathbb{Q}e8$ If 1... $\mathbb{W}xd8$ , then 2. $\mathbb{W}xg7\uparrow$   $\mathbb{Q}e8$  3. $\mathbb{W}f7\#$ .

2.f6!

The decisive blow. Black has no defence:

a) 2... $\mathbb{W}xd8$  3. $\mathbb{W}xg7\uparrow$   $\mathbb{Q}xg7$  4. $\mathbb{W}xg7\uparrow$   $\mathbb{Q}e8$  5. $\mathbb{W}f7\#$ b) 2... $\mathbb{W}xf6$  3. $\mathbb{W}a3\uparrow$ !  $\mathbb{W}e7$  4. $\mathbb{B}f1\uparrow$ –c) 2... $\mathbb{W}gxg6$  3. $\mathbb{W}g8\uparrow$ !  $\mathbb{B}xg8$  4. $\mathbb{W}xg8\#$ 

The following combination occurs frequently. So you must study it very carefully.

**Diagram 11-5****P.Johner – S.Tartakower**

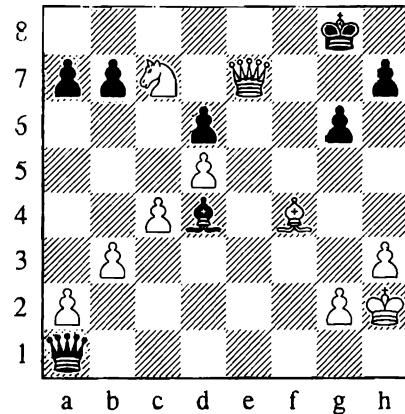

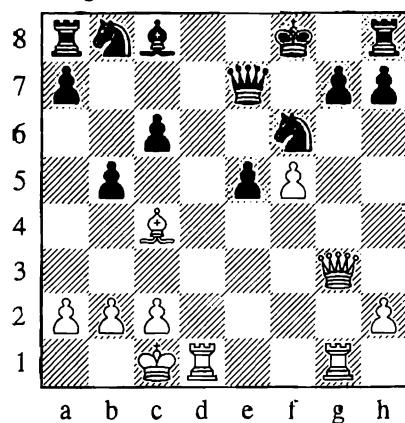

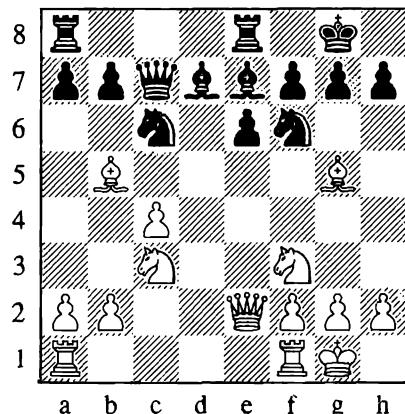

Berlin 1928

1... $\mathbb{Q}g4$ 

Black is offering to exchange bishops, or is he...?

2. $\mathbb{B}xe7??$

2... $\mathbb{Q}d4!$

White resigned. After 3. $\mathbb{Q}xd4$  there comes 3... $\mathbb{W}xh2\#$ . If 3. $\mathbb{W}d1$ , then 3... $\mathbb{Q}xf3\#$  4. $\mathbb{W}xf3$   $\mathbb{W}xh2\#$ .

Deflection may also be used to achieve an advantage in material. The following short game will familiarize us with some typical ideas.

### Schestakov – Guseinov

Dubna 1967

1.e4 c5 2. $\mathbb{Q}B3$   $\mathbb{Q}c6$  3.d4 cxd4 4. $\mathbb{Q}xd4$   $\mathbb{Q}f6$  5. $\mathbb{Q}c3$  d6 6. $\mathbb{Q}c4$  g6?!

This is not a good move here. White has the development to refute it. Other developing moves would have been better: 6...e6, 6... $\mathbb{Q}d7$  or 6... $\mathbb{W}b6$ .

7. $\mathbb{Q}xc6$  bxc6 8.e5! dx5??

### Diagram 11-6

A blunder. The black king now has to defend the queen. But it will be deflected.

After the better move 8... $\mathbb{Q}g4$  White plays 9. $\mathbb{Q}f4!$  (9.e6 f5!) and if 9... $\mathbb{W}b6$ , then 10. $\mathbb{W}f3$   $\mathbb{Q}f5$  11.exd6 exd6 12.0–0±.

9. $\mathbb{Q}xf7\#$ !+–

Even very experienced grandmasters have been victims of effective combinations involving deflection. Unfortunately the author of this book also belongs to this prominent group.

### Diagram 11-7

J.Timman – A.Yusupov

Tilburg 1987

How should you take the knight? Black thought about having a somewhat better endgame and played...

1... $\mathbb{W}xd4?$ ??

...overlooking the essential.

White wins with a typical combination involving deflection. Of course the correct move was 1... $\mathbb{B}xd4=$ .

**2.♕e8†!**

Disappointed, I resigned here. After 2...♕xe8 3.♗xd4 ♕ad8 there follows 4.♗g4! d2 5.♗f1+-.

**Diagram 11-8****A. Yusupov – B. Spassky**

Reykjavik 1988

But in this game luck was on my side.

**1...♝f8??**

1...♝d8?? would also be bad, due to 2.♗f5!+. But after 1...♝g4† my opponent would have had a great advantage. However, Spassky had overlooked a typical combination involving deflection.

**2.♗h7† ♕xh7! 3.♝xf8±**

And White made use of his material advantage to win.

Since operations involving deflection are often directed against very strong pieces, it is only extremely rarely that the opponent can defend against them.

**Diagram 11-9****Durst – S. Tarrasch**

Nuremberg 1908

The threat is ♜xh7#. But Black played a strong card: deflection.

**1...♝c7!!**

Even the passive move 1...♝h8 does not lose. White replies 2.♗b2 and then:

a) 2...♛h3? would be bad, on account of 3.♗d1! ♜xd1 4.♗g7† ♔h5 5.♗d5† ♔g4 (5...♔h4 6.♗g5#; 5...♗f5 6.♗xd1†+–) 6.♗xd1†+–.

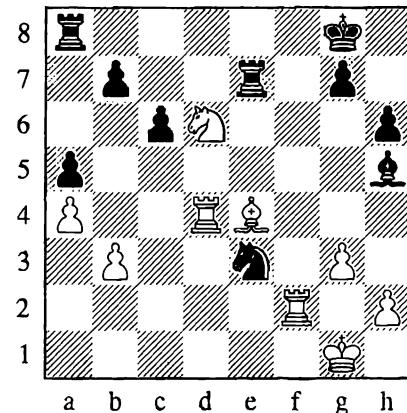

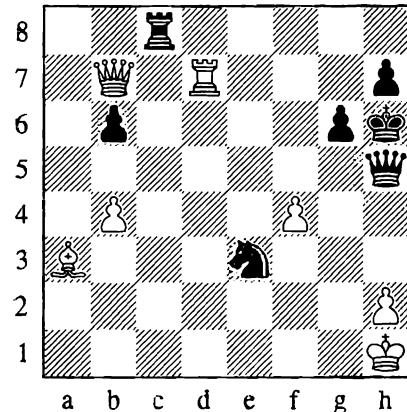

b) Black has to find 2...♛e2! and after 3.♗g7† there follows 3...♔h5 4.♗d5† ♔f5 5.♗xf5† gxsf5 6.♗f7† ♔g4 7.h3† ♔xh3 8.♗xf5† ♔g3 9.♗g5† ♔h3 10.♗h6† ♔g3=.

After 1...♝c7!! White cannot take the rook. But he has another solution.

**2.b5!!**

Threatening ♜f8#.

Of course not 2.♗xc7 ♛d1# nor 2.♗xc7 ♛f3† 3.♗g1 ♛g2#.

**2...♛d1†!****Diagram 11-8****Diagram 11-9**

This new deflection leads to a level endgame.

If 2... $\mathbb{W}e2?$ , then 3. $\mathbb{Q}xh7\#$   $\mathbb{Q}xh7$  (3... $\mathbb{Q}xh7$   
 4. $\mathbb{W}xc7\#$ ) 4. $\mathbb{Q}f8\#$   $\mathbb{Q}h5$  5. $\mathbb{W}xh7\#$   $\mathbb{Q}g4$  6. $\mathbb{W}xg6\#$   $\mathbb{Q}f3$   
 7. $\mathbb{W}h5\#$   $\mathbb{Q}g4$  (7... $\mathbb{Q}f2$  8. $\mathbb{W}xe2\#$ +) 8. $\mathbb{W}d5\#$   $\mathbb{Q}xf4$   
 (8... $\mathbb{Q}f2$  9. $\mathbb{W}g2\#$ +) 9. $\mathbb{Q}d6\#$ +-.

3. $\mathbb{E}xd1$   $\mathbb{E}xb7=$

Finally, try to solve these three difficult positions. Think for approximately 5 minutes per position. If you do not find the solution, read the small hint for each diagram and think about it for another 5 minutes. Only then should you look at the solution.

## The Greek gift sacrifice

The classic bishop sacrifice on h7 (or h2), commonly known as the *Greek gift* sacrifice, is one of the most important attacking motifs in the whole of chess. **With this sacrifice the castled position is destroyed** and we get a rapid attack against the opposing king.

Diagram 12-1

F.Yates – V.Marin y Llovet

Hamburg Olympiad 1930

**1. ♜xh7†!+– ♜xh7 2. ♜h5†**

This is even simpler than 2. ♜g5†, since Black is given no alternatives.

**2... ♜g8 3. ♜g5!**

The only way for Black to stop the mating attack is by sacrificing his queen. His own pieces (the queen on e7 and the rook on f8) are blocking the escape route for his king.

**3... ♜d8**

Avoiding mate, but still losing is 3... ♜xg5

**4. ♜xg5+–.**

**4. ♜h7† ♜f8 5. ♜h8#**

Since the sacrifice on h7 weakens the king's position, it can only very rarely be declined without serious consequences

Diagram 12-2

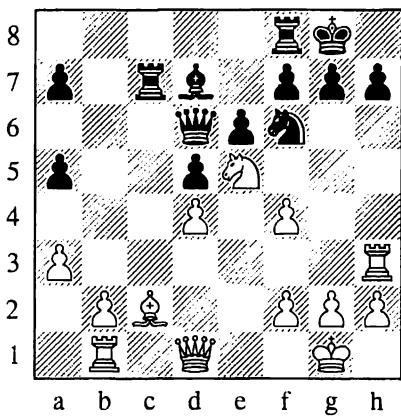

Diagram 12-2

K.Podzielny – F.Behrhorst

Karlsruhe 1986

**1. ♜xh7†! ♜h8**

1... ♜xh7 also loses very quickly to 2. ♜h5 ♜fc8 (2... ♜f6 3. ♜h8#) 3. ♜xf7†! ♜h8 4. ♜g6#.

**2. ♜g6† ♜g8**

And now we have a little combination.

**3. ♜xf7†! ♜xf7 4. ♜h8†!! ♜xh8 5. ♜xf7†+–**

**1–0**

As the examples so far have shown, the Greek gift sacrifice is even more dangerous if the rook can

be brought into the attack via the h-file. Here is another example.

**Diagram 12-3**

K.Richter – N.N.

Berlin 1935

1.  $\mathbb{Q}xh7\#$ !  $\mathbb{Q}xh7$  2.  $\mathbb{Q}g5\#$ !  $fxg5?$

This leads to a forced mate. 2... $\mathbb{Q}g8$  would be a more stubborn defence. White has two candidate moves:

a) 3.  $\mathbb{W}h5$   $fxg5$  4.  $hxg5$   $\mathbb{Q}f5!$  5.  $\mathbb{W}h7\#$  (nor is much achieved by 5.g4  $\mathbb{Q}xg5$  6.  $\mathbb{Q}xg5$   $\mathbb{Q}xg5$  7.  $\mathbb{W}h7\#$   $\mathbb{Q}f7$  and if 8.  $\mathbb{Q}h3?$ , then 8... $\mathbb{Q}f8$  9.  $\mathbb{Q}f3\#$   $\mathbb{Q}e8\#$ ) 5... $\mathbb{Q}f7$  6.  $\mathbb{W}h5\#$ =

b) 3.  $\mathbb{Q}xe6$   $\mathbb{W}a5$  4.  $\mathbb{Q}xf8$   $\mathbb{Q}xf8$  5.  $dxc5$   $\mathbb{Q}e6$  6. 0–0  $fxe5$  7.  $\mathbb{Q}xd5$   $\mathbb{Q}xc5$  and Black can still put up a defence.

3.  $hgx5\#$   $\mathbb{Q}g8$

3... $\mathbb{Q}g6$  loses to 4.  $\mathbb{W}h5\#$   $\mathbb{Q}f5$  5.  $g4\#$ .

4.  $\mathbb{Q}h8\#$ !

If 4.  $\mathbb{W}h5$ , then 4... $\mathbb{Q}f5!$  transposes to line 'a' above.

4... $\mathbb{Q}xh8$

Or 4... $\mathbb{Q}f7$  5.  $\mathbb{W}h5\#$   $g6$  6.  $\mathbb{Q}h7\#$   $\mathbb{Q}e8$  7.  $\mathbb{W}xg6\#$   $\mathbb{Q}f7$  8.  $\mathbb{W}xf7\#$ .

5.  $\mathbb{W}h5\#$   $\mathbb{Q}g8$  6.  $g6\#$ –

And the king's emergency exit is blocked by the  $\mathbb{Q}e7$  and the  $\mathbb{Q}f8$ .

1–0

The sacrifice on h7 does often win, but not automatically. **The result of the game will depend on the specific arrangement of pieces.**

#### Opening variation

**Diagram 12-4**

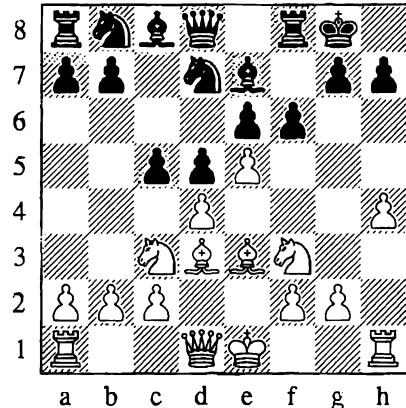

7.  $\mathbb{Q}xh7\#$ ?

Here the sacrifice is premature and incorrect. Black can defend the important h7-square. 7.  $\mathbb{Q}e1$  or 7.c3 would be better.

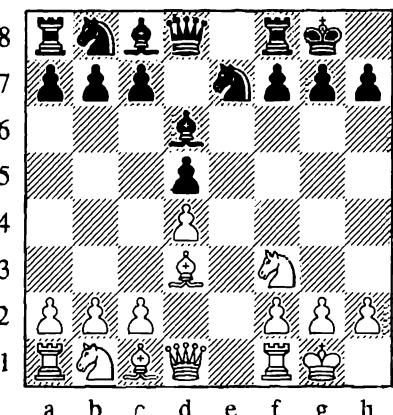

7... $\mathbb{Q}xh7$  8.  $\mathbb{Q}g5\#$   $\mathbb{Q}g8$

8... $\mathbb{Q}g6$  is also possible here, but the main variation is simpler.

**Diagram 12-3**

**Diagram 12-4**

**9.王h5 黑f5+–**

And Black wins.

If the defending side can protect the h7-square, then the combination will normally fail.

Sometimes it is very difficult to calculate combinations with the sacrifice on h7. Let us now study a classic example. In it Black tried to advance with his king in order to defend the h5-square. In such situations it is important for the attacking side to be able bring all its available reserves into the attack.

## Evaluating the position

In a game of chess it is particularly important to be able to evaluate the position correctly and objectively. Then you can find the correct plan or make a good decision.

What follows is simply a short list of the most important positional factors; this list could be extended.

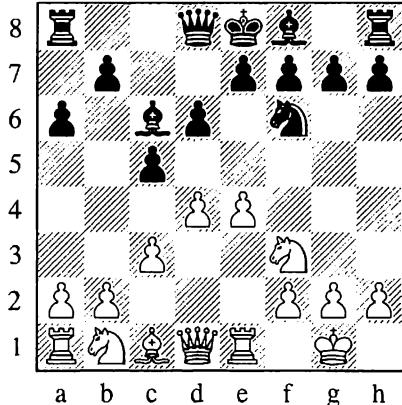

- 1) The position of the king
- 2) Material superiority
- 3) Control of the centre
- 4) Activity of the pieces
- 5) Pawn structure
- 6) Advantage in space
- 7) Open lines
- 8) The initiative

During the game it is necessary **to take into account only a few factors essential to the position**.

The art of evaluation actually consists of being able to filter out the essential factors in the position from all these numerous factors.

**The position of the king often plays a decisive role and can outweigh the other factors.** In order to open up your opponent's king position, you can often accept having a worse pawn structure or even giving up material.

White has the right idea of exchanging the light-squared bishops, but it is better to prepare the exchange with  $\mathbb{W}e2$  and e3-e4. Then Black would have extra worries due to the weakness on e6.

45...  $\mathbb{Q}g7$  46.  $g5$ !

Forcing play.

46...  $\mathbb{W}xa3$  47.  $\mathbb{W}xh6\#$   $\mathbb{Q}g8$  48.  $\mathbb{W}xe6\#$   $\mathbb{Q}g7$  49.  $\mathbb{W}f6\#$   $\mathbb{Q}g8$  50.  $\mathbb{W}e6\#$   $\mathbb{Q}g7$  51.  $\mathbb{W}e5\#$   $\mathbb{Q}h7$  52.  $\mathbb{W}f5\#$   $\mathbb{Q}g7$  53.  $\mathbb{W}e5\#$   $\mathbb{Q}h7$  54.  $\mathbb{W}xd5$

54.  $\mathbb{Q}g2?!$  also wins: 54...  $\mathbb{W}d3$  55.  $f5$   $\mathbb{W}e4\#$  56.  $\mathbb{W}xe4$   $dxe4$  57.  $d5$ . And even simpler would be 54.  $f5$   $\mathbb{W}f3$  55.  $\mathbb{W}e7\#$   $\mathbb{Q}g8$  56.  $\mathbb{W}e8\#$ .

54...  $\mathbb{W}e7$  55.  $\mathbb{Q}g3$   $a3$  56.  $\mathbb{Q}h4\#$ —

White is playing for an attack on the black king.

56...  $\mathbb{W}a7$  57.  $f5$   $a2$  58.  $g6\#$   $\mathbb{Q}h6$

Or 58...  $\mathbb{Q}g7$  59.  $\mathbb{W}e5\#$   $\mathbb{Q}g8$  60.  $\mathbb{W}e8\#$   $\mathbb{Q}g7$  61.  $\mathbb{Q}g5$ .

59.  $\mathbb{W}d8$

White's threats of mate are stronger than the black a-pawn.

59...  $\mathbb{W}xd4\#$

Or 59...  $\mathbb{Q}g7$  60.  $\mathbb{Q}g5\#$ — ( $\Delta f6\#$ ).

60.  $\mathbb{W}xd4$   $a1\mathbb{W}$

Hoping for 61.  $\mathbb{W}xa1??$  stalemate.

61.  $\mathbb{W}e3\#$ —

And then mate in three moves.

To improve your feeling for positional play and to refine your evaluation of the position, you should study games by strong players with their annotations.

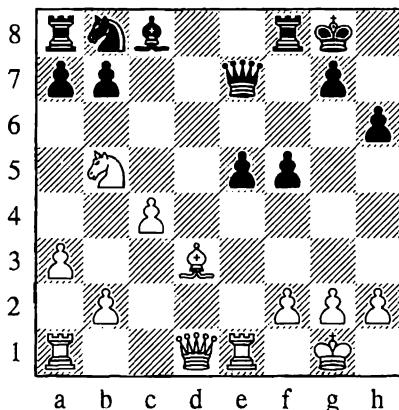

By comparing your evaluations with those of the grandmasters, you can discover and correct the positional errors you may be making.

## Ex. 13-1

A.Alekhine – M.Euwe

World Ch, Netherlands 1937

1.e4!

(1 point)

White opens the game, since the position of the black king in the centre is insecure.

Also 1 point, if you saw 1.♕he1? b5 and wanted to then play 2.e4!.

1...b5

Or 1...dxe4 2.♕he1 with a strong attack.

2.♗f4 ♘b6 3.exd5 ♗xd5 4.♕he1† ♕e6

## Ex. 13-2

A.Alekhine – F.Dus Chotimirsky

Karlsbad 1911

1.e5!

(1 point)

Here too, White should attack energetically.

1...♗ad8

1...♗hd8± is a better defensive try.

2.♗de1 b6 3.f4

Threatening e6 followed by f5.

3...gxsf4 4.gxf4 fxe5 5.♗g3† ♘f8 6.fxe5

## Ex. 13-3

A.Alekhine – K.Hromadka

Bad Pistyan 1922

1.e4!

(1 point)

1...b5

After 1...dxe4 there follows 2.d5!. White is aiming to exploit his lead in development by

opening up the game.

2.♗c2 dxe4

Better is 2...b4 3.♗e2 ♘b7.

## Ex. 13-4

A.Yusupov – S.Dolmatov

USSR Ch, Frunze 1979

1.c5!±

(1 point)

White exploits a favourable opportunity and prepares an invasion of d6.

1...♗c6

If 1...♗xc5?, then 2.♗c1 followed by 3.♗c7.

(another 1 point for this variation)

2.♗c4† ♘h7 3.♗d6!

(another 1 point)

White's endgame advantage is very clear, since Black cannot develop any counterplay in the centre or on the kingside.

3...♗xd6 4.♗xd6±

A.Yusupov – S.Dolmatov

USSR Ch, Minsk 1987

1.♗d2!

(2 points)

Only 1 point for 1.♗c4 or 1.a3.

The knight goes to c4. At the same time the important move g3 is prepared, to bring the f4-square under control.

# Solutions

## Ex. 13-7

Denying Black the use of the b5-square.

If you saw at least one of these two variations (1... $\mathbb{Q}d7$  or 1... $\mathbb{Q}d7?!$ ), you get 1 extra point.

2... $\mathbb{Q}d8$  3.g3  $\mathbb{Q}g4$  4. $\mathbb{Q}e3$   $\mathbb{Q}f3$  5.e5!

5. $\mathbb{Q}xf3$   $\mathbb{W}xf3$  6. $\mathbb{Q}g2$   $\mathbb{W}f6$  7. $\mathbb{Q}c4\pm$

5...dxe5 6. $\mathbb{Q}xf3$   $\mathbb{W}xf3$  7. $\mathbb{Q}g2$   $\mathbb{W}f6$  8.d6

Another good move would be 8.0-0.

8... $\mathbb{E}a7$  9.0-0

After 9. $\mathbb{Q}d5$  there follows 9... $\mathbb{W}e6!?$ , intending  $\mathbb{Q}d7$ .

9... $\mathbb{Q}g7$

If 9... $\mathbb{Q}d7$ , then 10. $\mathbb{Q}d5?!$   $\mathbb{W}g7$  11. $\mathbb{W}e3$  followed by  $\mathbb{Q}e7+-$ .

10. $\mathbb{E}ac1!$   $\mathbb{Q}d7$  11. $\mathbb{E}fd1$   $\mathbb{Q}f5$

After 11... $\mathbb{Q}e6$  there follows 12. $\mathbb{Q}d5$   $\mathbb{W}g5$  13. $\mathbb{W}xg5\pm$   $\mathbb{Q}xg5$  14. $\mathbb{Q}e7+-$ .

12. $\mathbb{Q}xf5$   $\mathbb{W}xf5\pm$

See Ex. 13-10.

## Ex. 13-6

A.Yusupov – V.Gavrikov

USSR Ch, Minsk 1987

1. $\mathbb{E}fc1!$

(2 points)

Intending a4 and  $\mathbb{Q}f1$ . White attempts to exploit the somewhat precarious position of the black queen.

Only 1 point for 1. $\mathbb{E}ac1$ , since White also needs the move a4.

1... $\mathbb{Q}a4$

If 1... $\mathbb{Q}f6?!$ , then 2. $\mathbb{Q}e5$   $\mathbb{W}b5\pm$ .

2. $\mathbb{W}a2$  b6

Now if 2... $\mathbb{Q}f6$ , then 3. $\mathbb{Q}e5$   $\mathbb{W}b5$  4.b3!!±. After 2... $\mathbb{E}ac8$  or 2... $\mathbb{W}b5?!$  comes 3. $\mathbb{Q}f1!\pm$ .

3.b3  $\mathbb{Q}e8$  4. $\mathbb{W}b2$

4.e4 would be somewhat premature, on account of 4... $\mathbb{Q}b4?!$  (if 4... $\mathbb{Q}c7?!$ , then 5. $\mathbb{W}b2\pm$ ; after 4... $\mathbb{Q}f4$  comes 5. $\mathbb{W}xg7$   $\mathbb{Q}xg2$  6. $\mathbb{Q}c3!±$ ) 5.axb4  $\mathbb{W}xa2$  6. $\mathbb{E}xa2$   $\mathbb{E}xd4$  7. $\mathbb{Q}xb6$   $\mathbb{E}b8\mathbb{Q}$  8. $\mathbb{E}xa7$   $\mathbb{E}xb4$  9. $\mathbb{E}xe7$   $\mathbb{E}4xb6$  and then 10... $\mathbb{Q}f8=$ .

4... $\mathbb{Q}f8\pm$

See Ex. 13-11.

G.Timoshenko – A.Yusupov

USSR Ch, Frunze 1979

1... $\mathbb{Q}d7!$

(2 points)

With this simple move Black prepares to double his rooks on the f-file. 1... $\mathbb{Q}b7$  would not be so strong, due to 2. $\mathbb{W}e6!-=$ .

2. $\mathbb{W}g3$   $\mathbb{W}c6!$

Black should retain the queens and play for an attack.

3. $\mathbb{Q}g5$   $\mathbb{Q}f5\mp$  4. $\mathbb{W}B$  h6 5. $\mathbb{Q}c1$   $\mathbb{Q}e7$  6. $\mathbb{W}e2?!$

6. $\mathbb{W}g3\mp$  would be tougher.

6... $\mathbb{E}af8$  7. $\mathbb{Q}e3?!\mp$

See Ex. 13-12.

## Ex. 13-8

D.Bernstein – A.Yusupov

European Team Ch, Skara 1980

1... $\mathbb{E}c8\mp$

(1 point)

Now Black controls the open file. White has no compensation for the pawn.

2.h3?!

2.h4? would be somewhat better.

2... $\mathbb{W}c6$  3. $\mathbb{W}b4\mp$   $\mathbb{Q}e6$  4. $\mathbb{E}d1$

If 4. $\mathbb{E}c1$ , then 4... $\mathbb{W}b6!-+.$

4... $\mathbb{f}6$  ( $\Delta g5$ ) 5.a3?

5.h4 $\mp$  would be more stubborn.

5... $\mathbb{W}b6$  6. $\mathbb{W}d2$   $\mathbb{W}b3$  7. $\mathbb{W}e2$   $\mathbb{E}c4$  8. $\mathbb{E}d2$  h5 $-+$

## Ex. 13-9

A.Yusupov – B.Jansson

European Team Ch, Skara 1980

1.d5

(1 point)

1... $\mathbb{Q}cb8$  2.b4 $\pm$

(another 1 point)

White gains even more space and deprives the opposing knight of good squares.

2...a6 3. $\mathbb{Q}c4$   $\mathbb{Q}c8$  4. $\mathbb{E}c1$   $\mathbb{Q}f6$  5. $\mathbb{Q}fd2$   $\mathbb{Q}e8?!$

6. $\mathbb{Q}xb6-+$   $\mathbb{W}xb6$  7. $\mathbb{E}xc8$

# Solutions

## Ex. 13-10

A.Yusupov – S.Dolmatov

USSR Ch, Minsk 1987

1.  $\mathbb{W}e3!+$ –

Targeting the weakness on c5.

(3 points)

1 point for 1.  $\mathbb{Q}h3$ . After 1...  $\mathbb{W}h5!$  2.  $\mathbb{W}g7!$   $\mathbb{E}e8$  3.  $\mathbb{Q}xd7$   $\mathbb{E}xd7$  4.  $\mathbb{B}d5!$  White is clearly better (another 1 consolation point for this variation).

The move in the game is somewhat stronger. White finds a sensitive point in Black's position and attacks it.

1...  $e4$  2.  $\mathbb{Q}xe4$   $\mathbb{W}e5$  3.  $\mathbb{B}d5$   $\mathbb{W}e6$

4.  $\mathbb{B}dxc5!$   $\mathbb{Q}xc5$  5.  $\mathbb{W}xc5!+–$

Black could no longer hold the position and resigned.

## Ex. 13-11

A.Yusupov – V.Gavrikov

USSR Ch, Minsk 1987

1.  $e4!±$

(2 points)

A logical move, gaining White even more space. However, Black has no weaknesses in his position and can put up a good defence.

1...  $\mathbb{Q}e7$  2.  $a4$

If 2.  $e5$ , then 2...  $\mathbb{Q}d5$  3.  $\mathbb{Q}d6$   $\mathbb{Q}xd6$  4.  $\mathbb{exd}6$   $f6=$ .

2...  $\mathbb{B}ac8$  3.  $\mathbb{Q}c3$   $\mathbb{Q}c6$  4.  $\mathbb{B}d1$

Here too, 4.  $e5!?$  would not be so clear, because of 4...  $\mathbb{Q}b4$ .

4...  $b5!?$

The alternative would be 4...  $\mathbb{Q}b4$ .

5.  $\mathbb{axb}5$   $\mathbb{W}xb5$  6.  $e5!±$

## Ex. 13-12

G.Timoshenko – A.Yusupov

USSR Ch, Frunze 1979

1...  $\mathbb{W}g6!$

(2 points)

The queen returns with decisive effect for Black's attack.

1...  $\mathbb{B}f3!?$  (1 point) would not be so clear, in view of 2.  $\mathbb{Q}xc5!$   $\mathbb{Q}xh3!$  3.  $\mathbb{Q}xe7$   $\mathbb{W}g6$  4.  $\mathbb{W}f1$ , although after 4...  $\mathbb{B}xf2$  Black is better. You get 1 consolation point if you saw this variation.

2.  $\mathbb{Q}h2$   $\mathbb{Q}f5$

(another 1 point)

3.  $\mathbb{Q}f4!?$

After 3.  $\mathbb{W}g4$  there follows 3...  $\mathbb{W}c6!+–$ .

3...  $\mathbb{Q}h4!+–$

White resigned, in view of 4.  $\mathbb{Q}g3$   $\mathbb{B}xf2!+–$ .

## Planning in chess

### How does a beginner play?

He tries to create a threat and hopes that his opponent will overlook it. He does not plan his game, his decisions are taken at random.

For example, he first attacks a pawn on the queenside and then attempts to undertake something quite different on the kingside. He often does not even consider what his opponent will reply or whether the opponent has also set up some threats. In general, in a game between beginners, the winner is not necessarily the better player but only the one who is paying more attention.

There is no plan in a beginner's game and you cannot even spot any strategic direction.

The decisions taken in the game are normally very primitive: if a check is possible, then it is given; if a capture can be made, then the material is taken, and if pieces can be exchanged, well that is what happens, whether the operation is a good one for the player or for his opponent.

### How does a master play?

A master tries to understand the position. **He seeks out the weaknesses in his opponent's position and attempts to exploit them. He spots his opponent's plans and tries to thwart them. He struggles for the initiative.**

The master coordinates his pieces and tries to play in such a way that **all his pieces and pawns are working actively and supporting each other**. He draws up a *plan* in order to deploy his forces in an optimal manner. It often happens that he does not even have to look for a plan, because he has already studied many typical situations and pawn structures, and thus in the position in his game he immediately recognizes the correct plan.

**Diagram 14-1****A.Karpov – S.Gligoric**

Milan 1975

**1.c4!?**

An important decision. White now wants to prepare b2-b4. If 1.♘d2, then 1...♝c8 2.♘c4 ♘d7 followed by ♘b5.

**1...♝c8 2.♘d2 ♞b8 3.♗b1!**

Karpov draws up a good plan. He wants to redeploy his knight by ♘e1-d3, in order to support the key move b2-b4 even better.

After 3.♗c3 Black could reply 3...♞h6.

3.b4 would be premature, in view of 3...♞d7 (3...cxb4? 4.♕xb4 ♘d7 5.♖a5±) 4.♗b1 cxb4=.

**3...♝e7!**

Black does all he can to ward off the strategic threat of b2-b4.

**4.♘e1!?**

A slight inaccuracy. Karpov should first play 4.b3, and only after 4...♝eb7 5.♗a3 will he be able to bring his knight to d3 without any problem.

**4...♝eb7**

If 4...♞e8 (Δf5), then 5.b4!! or 5.b3 f5 6.♘d3.

**5.♘d3**

After 5.b4 there comes 5...♛c7 with counterplay.

**5...♝b3!**

This blockade makes the planned breakthrough considerably more difficult.

**6.♗ba1**

To break the blockade Karpov has to exchange one pair of rooks.

**6...♞e8 (Δf5) 7.♗c3 ♛h4**

7...f5?! would be premature, because of 8.♘c1 ♞b7 9.♕xa6. The alternative would be 7...♛e7±.

**Diagram 14-2****8.♗4a3 f5 9.♘e1!**

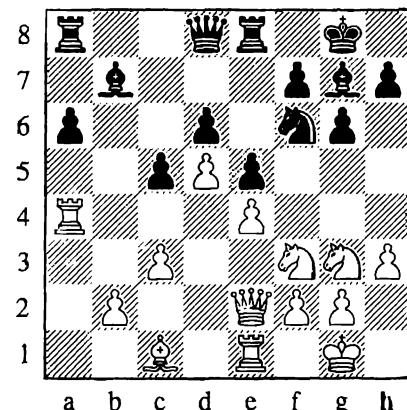

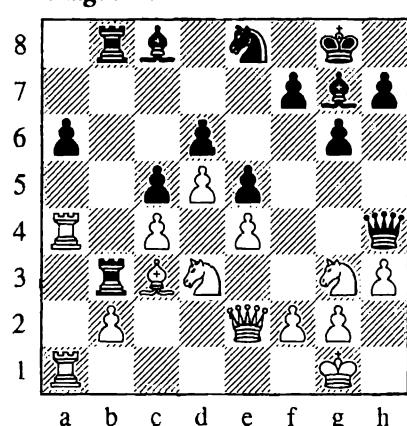

A clever move, which blunts the counterplay on the kingside.

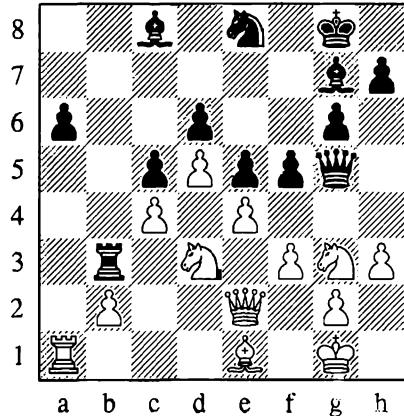

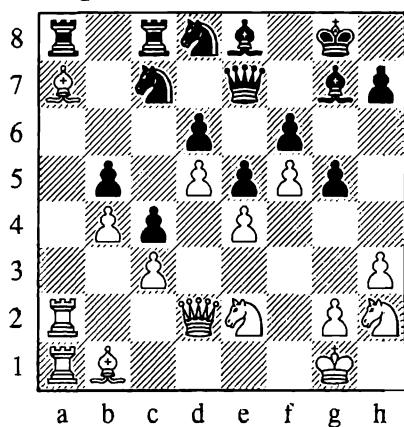

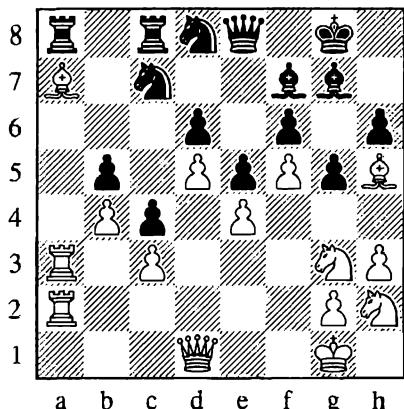

**9...♛e7**

After 9...♞f6 comes 10.f4!. While if 9...f4?!, then 10.♘f1±.

**10.♕xb3 ♞xb3 11.♘c1 ♞b8 12.♘d3 ♞b3 13.f3**

Karpov rejects 13.♛c2?! ♞b8 14.b4, in view of 14...cxb4 15.♕xb4 f4 16.♘f1 f3→.

**Diagram 14-1****Diagram 14-2**

**Diagram 14-3****Diagram 14-4****Diagram 14-5****13...Bg5**

After 13...Rh6 Karpov could play 14.Qf1! followed by Qd2.

However 13...Qf6!? would be somewhat better, as then 14.Qf1? can be met by 14...fxe4 15.fxe4 Qxe4 16.Qxe4 Rf5.

**Diagram 14-3****14.Qh2!**

White prepares 15.Qc2. But not 14.Qf1? here, due to 14...fxe4 15.fxe4 Rxh3.

**14...Qf6 15.Qc2 Rb8 16.b4±**

Finally Karpov manages to achieve his plan. He is winning on the queenside, since Black cannot defend his weaknesses on a6 and d6.

**Diagram 14-4****A.Karpov – W.Unzicker**

Nice Olympiad 1974

**1.Qc2!**

Karpov is particularly good in such situations. He finds a ‘redundant’ piece – the white-squared bishop – and prepares to activate or exchange it. His plan is: Qd1, Qg3 and then Qh5.

**1...Qf7 2.Qg3 Qb7 3.Qd1 h6?!**

This weakens the g6-square.

**4.Qh5 Qe8 5.Qd1 Qd8 6.Ra3**

Let's not be over-hasty!

**6...Qf8 7.Ra2 Qg8****Diagram 14-5****8.Qg4! Qf8 9.Qe3 Qg8 10.Qxf7† Qxf7?**

10...Rxf7 11.Qb6± would be more stubborn. White could also consider 11.Qa1 (followed by Qb6) or 11.Qh5±.

**11.Qh5 Qd8**

After 11...Qh8 Karpov would strengthen his position further: 12.Qg4 Rxh5 13.Qxh5 Rf7 14.Qb6 Rxa3 15.Rxa3 Ra8 16.Rxa8 Qxa8 17.Qd8+– or 17.Qa5+–.

**12.Qg6 Qf8 13.Qh5+–**

Black can move none of his pieces and simply resigned! The threat is Qg4 winning

Diagram 14-6

**A.Yusupov – J.Rubinetti**

Toluca Interzonal 1982

**1.♘f1!**

The black knight is pinned and cannot capture on e4. White seizes the opportunity and brings his knight into the attack on f5.

1...♝e8? is not so good, due to 1...♝e8 and then f5.

**1...♝e8 2.♘g3 f6 3.♘f5 ♜xg5?**

The knight on f5 is very strong, but it is even more dangerous to open a file against his own castled position. White now obtains a strong attack.

A relatively better try would be 3...♝b8 4.dxc6 bxc6 5.♝xd6 ♜xd6 6.♝xc5+.

**4.gxf5**

White can now attack down the g-file.

**4...♜b6**

Diagram 14-7

**5.♝h5!**

Opening the way for the queen.

**5...♝d8 6.♝h6!**

If 6.♝g6?, then 6...hxg6 7.fxg6 f5.

But White does have another solution: 6.♝g4 ♜d7 7.♝h4 ♜d3 8.♝g6 hxg6 9.fxg6 ♜ff7 10.♝h7+ ♜f8 11.♝h8+ ♜e7 12.gxf7 ♜xf7 13.♝xg7! ♜xg7 14.♝g1+– (P.Wolff).

**6...♝d7 7.♝xe8 ♜xe8 8.♝h5+– ♜b8**

Or 8...♝f8 9.♝xg7! ♜xg7 10.♝xg7+ ♜xg7 11.♝g1+ ♜h8 12.♝g4+–.

**9.♝xg7!**

Black resigned, in view of 9...♝xg7 10.♝xg7+ ♜xg7 11.♝g1+ ♜h8 12.♝h6!+–.

Diagram 14-8

**M.Taimanov – A.Yusupov**

Leningrad 1982

Black has a single problem in this position: his major pieces are too passive. At this point Black started a plan which I had first seen in a game by Fischer.

**1...♞h8! 2.♝c2 ♜g8! 3.♝cd2 g5?**

Now Black's idea has become clear: he will bring his major pieces on to the g-file and he wants to open this file later.

Diagram 14-6

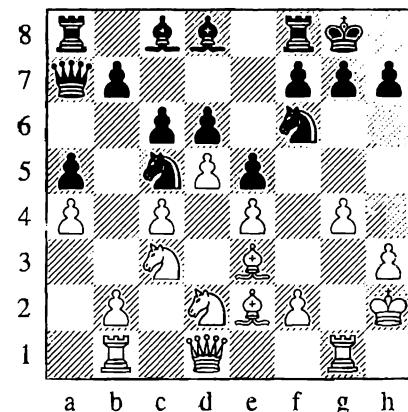

Diagram 14-7

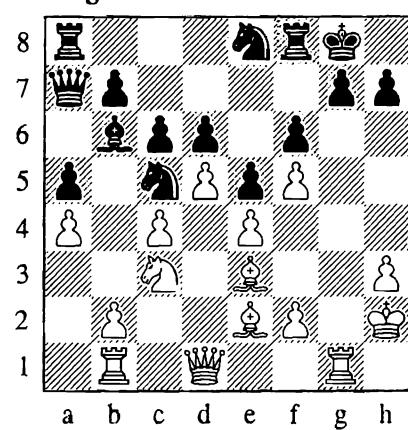

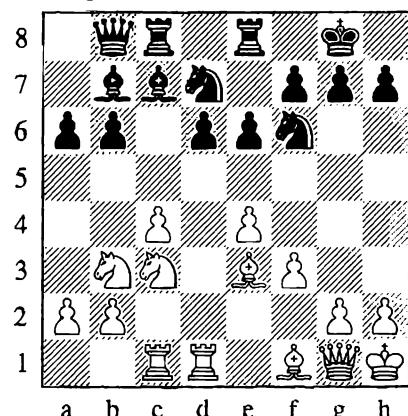

Diagram 14-8

**4.  $\mathbb{Q}d4 \mathbb{E}g6$**

Another good move would be 4...h5.

**5.  $\mathbb{Q}c1?!$**

Better is 5.g4!  $\infty$ .

**5...  $\mathbb{E}cg8$  6.  $\mathbb{Q}d3$**

Here, after 6.g4 there follows 6 ..h5! 7.gxh5  $\mathbb{E}h6\bar{f}$ .

**6..  $\mathbb{W}f8!$**

The queen joins the attack.

**7.  $\mathbb{E}e1?!$**

7.  $\mathbb{Q}f2$  is a better defence.

**7...  $g4!$**

Such an opportunity to open the g-file has to be seized.

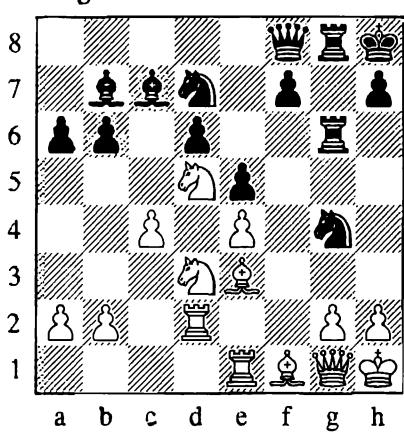

**8.  $f\times g4!$**

8.  $\mathbb{Q}c2 \mathbb{W}h6$  9.  $\mathbb{Q}e3 \mathbb{W}h4\bar{f}$  would be worse. If 8.f4, then 8...g3! 9.h3 e5 $\bar{f}$  (Taimanov).

**8...  $e5$  9.  $\mathbb{Q}e3 \mathbb{Q}xg4$  10.  $\mathbb{Q}d5?$**

The correct move is 10.  $\mathbb{Q}f2!\bar{f}$ .

Diagram 14-9

**10...  $\mathbb{Q}d8\bar{f}$**

The 'redundant' piece comes into the game! The threat is  $\mathbb{Q}xe3$  and then  $\mathbb{Q}g5$ .

**11.  $\mathbb{Q}f2 \mathbb{Q}h4!$  12.  $\mathbb{E}ee2$**

12.  $\mathbb{Q}xb6?$   $\mathbb{Q}xb6$  13.  $\mathbb{Q}xb6$  would be bad, due to 13...  $\mathbb{Q}xh2!-\bar{+}$ .

**12...  $\mathbb{Q}xe3$  13.  $\mathbb{Q}xe3$**

Not 13.  $\mathbb{E}xe3 \mathbb{Q}g5-\bar{+}$ .

**13.  $\mathbb{Q}xf2$  14.  $\mathbb{W}xf2$**

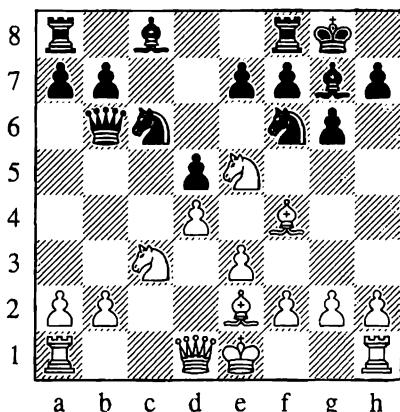

If 14.  $\mathbb{E}xf2$ , then 14...  $\mathbb{Q}c5-\bar{+}$ .

**14...  $\mathbb{Q}xe4\bar{f}$**

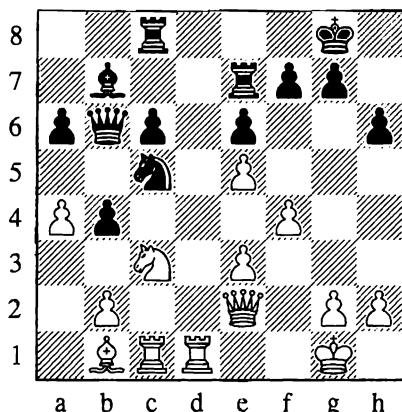

Black is clearly better. He went on to win the game.

## Ex. 14-1

A.Yusupov – H.Pfleger

World Team Ch, Lucerne 1985

1.a3!±

(2 points)

A standard solution. White defends his b2-pawn in this way and prepares his queenside expansion with 2.b4.

Only 1 point for 1.0-0 or 1.Qxc6.

1...a5?!

1...Qxb2?? loses to 2.Qa4+- . But better is 1...Qf5, with the idea 2.b4 Qfc8±.

**2.0-0 Qf5 3.Qa4 Qa7 4.Qc1±**

White stands better. He can exert pressure down the c-file and on the queenside and he has the good squares b5 and c5 at his disposal.

## Ex. 14-2

Wang Zili – A.Yusupov

Novi Sad Olympiad 1990

1...f6!

(1 point)

Black intends Qc5 followed by Qd3.

2.Qd4

If 2.Qc2??, then 2...Qb6† 3.Qd4 Qd3

4.Qe2 a5?†.

2...Qc5?†

(1 point)

2...Qb6? 3.Qa3? would not be so good.

3.bxc4

If 3.Qc2, then 3...cxb3! 4.axb3 Qf5 and now:

a) 5.Qa3 Qxc3 6.Qxe7 Qxc2 (6...Qxe7

7.f4?†) 7.Qxf6 Qxf3†! 8.gxf3 Qxe1† 9.Qxe1

Qxe1† 10.Qf2 Qe6 11.Qg5 Qxb3?†

b) 5.Qe2 Qxc2 6.Qxc2 Qd3?† or 6...Qc6?†.

**3...dxc4 4.Qc2?†**

See Ex. 14-12

## Ex. 14-3

S.Reshevsky – R.Garcia

Buenos Aires 1970

1.Qd1!

(2 points)

White's plan is Qc2, Qbe1 and after that a breakthrough in the centre with f4 and e5.

Only 1 point for the logical move 1.Qbe1??, since with 1...Qh8!, introducing the tactical threat of 2...Qxe4, Black can make matters complicated.

1...Qd7

After 1...Qh8?? there follows 2.Qe2.

**2.Qxg7 Qxg7 3.Qc2 Qe7 4.Qbe1 Qe8 5.f4 Qef6 6.Qe2 Qh8 7.Qf1 Qg8 8.e5?†**

## Ex. 14-4

M.Botvinnik – G.Goldberg

Leningrad 1929

1.Qc2!

(2 points)

1.Qe4 (1 point) is also not bad. White wants to weaken Black's castled position and still retain the knight, since he can see good attacking prospects on the kingside.

**1...g6 2.Qe2 Qd7 3.Qd4 c5 4.Qd6 Qc7 5.h4?†**

A better defensive try is 5...h5 6.Qg3 (ΔQxh5) 6...Qf8 7.Qd2 (ΔQe4, Xf6) 7...a5 8.Qd3?.

6.Qa2!

But not 6.cxf6 Qxf6 7.Qxg6?? Qg7.

**6...Qf7 7.Qd4**

7.h5?† is even stronger.

**7...Qf8 8.Qd2 Qa5?!**

If 8...cxd4, then 9.Qxc7 Qexc7 10.Qxd4?†. After 8...Qce8 comes 9.h5?†.

**9.Qxe6! Qxe6 10.Qxe6 Qxe6 11.Qd7† Qf8**

**12.Qxe6?†**

**1-0**

Leningrad 1931

1... $\mathbb{Q}b4!$

(2 points)

1... $\mathbb{Q}d4$  (1 point) is not so accurate, because of 2. $\mathbb{Q}xd4$   $\mathbb{C}xd4$  3. $\mathbb{W}a2!$ .

2.a4  $\mathbb{Q}d4$

8... $\mathbb{Q}c3!$  9. $\mathbb{Q}xc3$   $\mathbb{D}xc3$  10. $\mathbb{W}e3$   $\mathbb{Q}xd3$

11. $\mathbb{Q}f2$   $\mathbb{W}d4$  12. $\mathbb{W}xd4$   $\mathbb{D}xd4$  13. $\mathbb{Q}f1$

## An opening repertoire for White after 1.e4 e5

In this chapter we shall try to construct an opening repertoire against 1...e5. This is, of course, only an example of how to work with the data. **You should prepare your repertoire according to your own chess tastes and style.** It is very important that you should like and understand the typical positions which result from your chosen opening.

**One good method consists of choosing, as a model, a strong player who plays your choice of opening particularly well and often, and then following his games. You study some model games** in order, above all, to get a better understanding of the middlegame.

To reduce the number of variations which are required, I recommend that you try the *Four Knights Game*. The main advantage is that your opponent has almost no option other than going into the said opening.

Romanishin very often plays this line. But White's game is much simpler, because he has rather more possibilities in the centre. The following lines show that White has obtained a strong initiative:

- a) 14... $\mathbb{Q}xb2?$  15. $\mathbb{Q}b1$   $dxe4$  16. $\mathbb{Q}c4$   $\mathbb{Q}f6$  17. $\mathbb{W}xf7+$

b) 14... $dxe4?!$  15. $\mathbb{Q}b4+$  and now:

b1) 15... $\mathbb{Q}d8$  16. $\mathbb{Q}b5!$   $c6$  (16... $\mathbb{Q}d7$  17. $\mathbb{Q}xd7$   $\mathbb{Q}xd7$   
18. $\mathbb{W}d5+$ ) 17.0–0–0–

b2) 15... $\mathbb{Q}e8$  16. $\mathbb{Q}c4$   $g6$  (or 16... $\mathbb{Q}e6$  17. $\mathbb{Q}xe6$   $g6$   
18. $\mathbb{W}b5+$ ) 17. $\mathbb{W}d5+-$

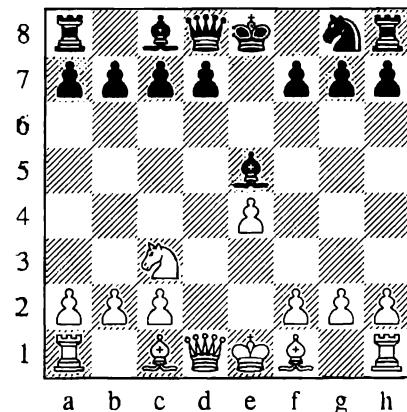

c) If 14... $\mathbb{Q}h3$ , then 15.0–0–0–.

White now cuts off the white-squared bishop.

## Opening 2

c5 18.f6†! gxf6 19.Qxc5† Qxc5 20.Qxc5† Qe8  
21.Qb5† Qd7 22.Qxd7† Qxd7 23.0–0–0†+–.

### 16.Qd1!+–

All the white pieces join the attack. The black queen is also in danger. The threat is not only Qb4† and then Qd2, but also simply 17.Qf2 Qg1† 18.Qe2.

### 16...dxe4

If 16...c6, then 17.Qf2 Qg1† 18.Qe2+–. After 16...Qd4 there comes 17.Qb4† c5 18.Qd2 Qxf1† 19.Qxf1+–.

### 17.Qc4

And Black resigned, in view of 17...Qf8 (or 17...Qd4 18.Qxf7† Qd6 19.Qb4† Qc6 20.Qxd4 Qxd4 21.Qd5† Qb6 22.Qa5#) 18.Qb4† Qe8 19.Qd2+–.

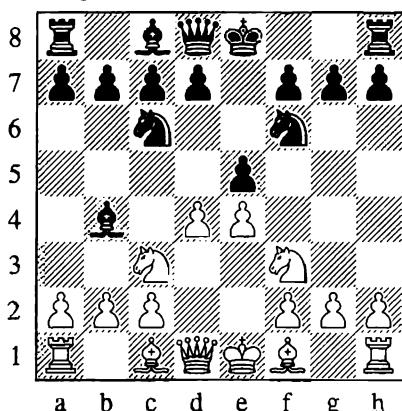

After 1.e4 e5 2.Qf3 we simply have to prepare for the *Philidor Defence* (2...d6), the *Three Knights Opening* (2...Qc6 3.Qc3 g6), and a rare variation of the *Petroff Defence* (2...Qf6 3.Qc3 Qb4), in order to have available a complete repertoire after 1.e4 e5.

We shall consider these openings in the test which follows.

After 1.e4 e5 2.Qf3 Qc6 3.Qc3 Qc6, I recommend 4.d4. This move leads to positions which can also arise from the *Scotch Game* (3.d4 exd4 4.Qxd4 Qf6). Delaying d2-d4 has allowed us to avoid certain variations such as 3.d4 cxd4 4.Qxd4 Qc5 or 4...Qh4.

Here are two model games for you to study. Try to find for yourself the moves for White in the positions in the diagrams.

### Diagram 15-5

The *Morphy Variation* leads to sharp play. We shall only study the most important variation.

### 5.Qxe5! Qxe4

Alternatives:

a) 5...Qxe5? 6.dxe5 Qxe4 is worse, because of 7.Qg4! d5 8.Qxg7 Qf8 9.a3± and now:

a1) 9...Qc5 10.Qxe4 dxe4 11.Qg5 Qd4□ (11...Qe7? 12.Qd1 Qd7 13.c6! fxe6 14.Qe2!+–; 11...Qd5?

12.♗d1! ♖xf2† 13.♕xf2 ♛d3...♘xd1 14.♗b5†±)

12.♗b5†± c6?! – see Ex. 15-1.

a2) 9...♗a5? 10.♗h6+–

a3) 9...♗xc3† 10.bxc3±

b) After 5...0–0 6.♗d3 ♗e8 7.♗d2 ♖xd4!? 8.♘xd4

c5! 9.♗d3 ♗xe5 10.0–0–0 d5 11.♗xd5 (or 11.♗g3!?)

♗xc3 12.♗xc3 ♗xe4 13.f3 ♗e3 14.♗xf6 ♘xf6

15.♗xd5 ♗e6 16.♗xc5 ♗a3!=) 11...♗xd5 12.♗f4!

White obtains an advantage.

c) The other main variation is 5...♗e7 6.♗d3 and:

c1) 6...♗xd4!? 7.♗xd4 ♗c5 8.♗d5 (8.♗d2 ♗xe5

9.f4 ♗e7 10.e5 d6∞) 8...♗xd4 9.♗xe7 ♗xe5 10.♗xc8

♗xe4 11.f3 ♗c5 12.♗e3 ♗xb2 13.♗d1 b6 14.♗xc5

bxc5 15.♗a6 ♗d8 16.♗d2±

c2) 6...♗xe5 7.dxe5 ♗xe5 8.♗d2 0–0 9.0–0–0 d6

(9...♗xc3 10.♗xc3 ♗xe4 11.♗g3 ♗g6 12.♗d3 with

an attack) 10.f4!± ♗e6 11.♗c1 ♗e8 12.♗g3!±

## 6.♗g4!

An important idea.

### 6...♗xc3 7.♗xg7 ♗f8

After 7...♗f6 there follows 8.♗xf6 ♗e4† 9.c3 ♗xf6

10.♗xc6 dxc6± (Y.Estrin).

### 8.a3 ♗xd4??

#### Diagram 15-6

A risky move. Black should probably prefer 8...♗a5?!, although after 9.♗xc6 dxc6 10.♗e5† ♗e7 11.♗xe7† ♗xe7 12.♗d2 ♗f5 13.bxc3 (or 13.♗xc3 ♗xc3† 14.bxc3 ♗xc2 15.♗d2±) 13...♗xc2 14.c4 ♗xd2† 15.♗xd2 ♗g6± White gets a somewhat better endgame.

### 9.axb4 ♗xc2† 10.♗d2 ♗xa1 11.♗xc3

#### Diagram 15-7

### 11...a5

After 11...♗e7 comes 12.♗h6! a5 13.♗xf8† ♗xf8 14.♗xf8 ♗xf8 15.bxa5 ♗xa5 16.♗c4± and the black knight is misplaced (Polovodin).

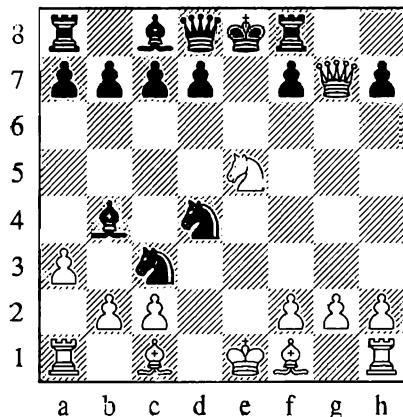

### 12.♗c4!

White develops a strong attack. Even the h1-rook is now ready to support the attack.

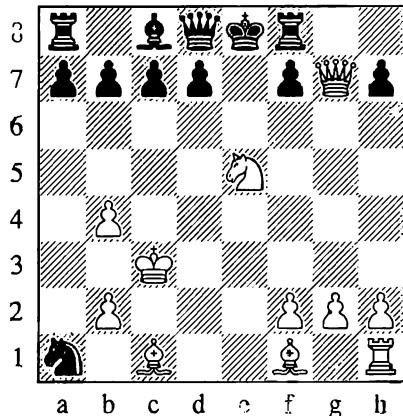

### 12...♗e7

Nor can 12...axb4† 13.♗d2 (13.♗d3 d5 14.♗b5† c6 15.♗xc6 ♗f5† 16.♗e2 bxc6 17.♗xc6† ♗d7 18.♗xa8 ♗xa8 19.♗h6 is also good) 13...d5 14.♗b5† c6 15.♗e1! ♗e6 16.♗xc6 bxc6 stop White's attack. See Ex. 15-2.

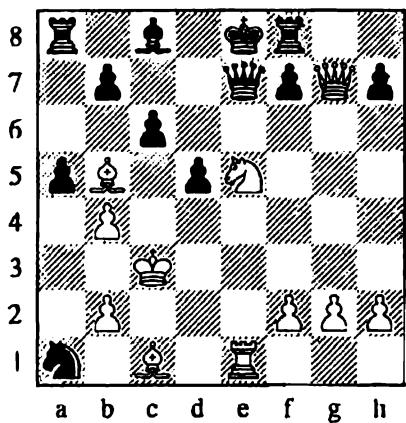

Diagram 15-9

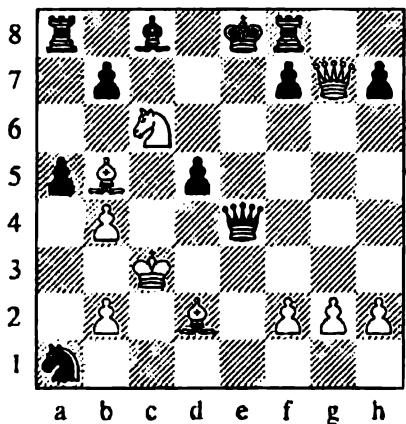

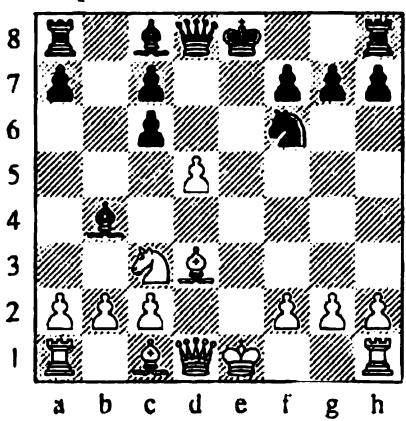

Diagram 15-10

**13.  $\mathbb{B}e1!! \mathbb{d}5$**

If 13... $\mathbb{W}xb4\#$ , then 14.  $\mathbb{Q}d3 \mathbb{W}d6\#$  (for 14... $d5$  see Ex. 15-3) 15.  $\mathbb{Q}e2 \mathbb{W}e7$  16.  $\mathbb{Q}d1!+-$ .

**14.  $\mathbb{Q}b5\# c6$**

Diagram 15-8

**15.  $\mathbb{Q}xc6!$**

An incisive sacrifice.

**15...  $\mathbb{W}xe1\# 16. \mathbb{Q}d2 \mathbb{W}e4$**

After 16... $bxc6$  comes 17.  $\mathbb{Q}xc6\# \mathbb{A}d7$  18.  $\mathbb{Q}xd7\#$  19.  $\mathbb{Q}xc1 \mathbb{R}ac8\#$  20.  $\mathbb{Q}d3 \mathbb{Q}c2$  21.  $\mathbb{Q}c3 \mathbb{Q}xb4\#$  22.  $\mathbb{Q}xb4 axb4$  23.  $\mathbb{W}xh7\pm$  with a clear advantage to White (Evers – Schütze, Corr. 1983).

16... $axb4\#?$  loses immediately to 17.  $\mathbb{Q}xb4\#+-$ .

Diagram 15-9

**17.  $\mathbb{Q}b8\#!$**

The natural looking 17.  $\mathbb{Q}e5\#$  would not be good, because of 17... $\mathbb{A}d7$  18.  $\mathbb{Q}xd7\# \mathbb{Q}e7$  19.  $\mathbb{Q}g5\# \mathbb{Q}d6$ .

**17...  $\mathbb{Q}d8$**

Now 17... $\mathbb{Q}d7$  loses after 18.  $\mathbb{Q}xd7\# \mathbb{Q}c7$  19.  $\mathbb{Q}g5\# \mathbb{Q}d6$  20.  $\mathbb{W}xf8\# \mathbb{Q}c7$  21.  $\mathbb{Q}d8\# \mathbb{Q}xb8$  22.  $\mathbb{Q}b6\#+-$ .

**18.  $\mathbb{W}xf8\# \mathbb{Q}c7 19. \mathbb{Q}c5\#$**

And Black resigned, in view of 19... $\mathbb{Q}xb8$  (19... $\mathbb{Q}d8$  20.  $\mathbb{W}d6\#$ ) 20.  $\mathbb{W}d6\# \mathbb{Q}a7$  21.  $\mathbb{Q}e3\# \mathbb{W}xc3\# \square$  22.  $fxe3 axb4\#$  23.  $\mathbb{W}xb4\#+-$ .

J.Lautier – I.Sokolov

**1.c4 e5 2.  $\mathbb{Q}f3 \mathbb{Q}c6$  3.  $\mathbb{Q}c3 \mathbb{Q}f6$  4.  $d4 exd4$**

The main variation.

**5.  $\mathbb{Q}xd4 \mathbb{Q}b4$**

Black also has other moves, but this is the only one which logically begins the struggle for the centre. The possible alternatives are 5... $d6$  and 5... $\mathbb{Q}c5$ .

**6.  $\mathbb{Q}xc6 bxc6$  7.  $\mathbb{Q}d3 d5$  8.  $\mathbb{Q}xd5$**

Diagram 15-10

**8...  $\mathbb{Q}xd5$**

8... $\mathbb{W}e7\#$  is an attempt to level the position. After 9.  $\mathbb{Q}c2 \mathbb{W}xe2\#$  (9... $\mathbb{Q}xd5$  10.  $\mathbb{W}xe7\# \mathbb{Q}xe7$  11.  $a3\#$ ; 9... $\mathbb{Q}xd5$  10.  $\mathbb{W}xe7\# \mathbb{Q}xe7$  11.  $0-0\#$ ) 10.  $\mathbb{Q}xe2 \mathbb{Q}xd5$  (10... $\mathbb{Q}xd5$  11.  $\mathbb{Q}h5 \mathbb{Q}d8$  12.  $\mathbb{Q}d1 c6$  13.  $\mathbb{Q}d4\#$ ) 11.  $\mathbb{Q}xd5 cxd5$  12.  $\mathbb{Q}b5\# \mathbb{Q}d7$  13.  $\mathbb{Q}xd7\# \mathbb{Q}xd7$  14.  $\mathbb{Q}d1 \mathbb{Q}he8\#$  15.  $\mathbb{Q}c3 \mathbb{Q}c6$ , White has a strong idea: 16.  $c4! dxcc4$  17.  $\mathbb{Q}d4\#$ .

**9.  $0-0 0-0 10. \mathbb{Q}g5 c6 11. \mathbb{Q}a4$**

A modern idea.

11... $\mathbb{W}f3$  is the main alternative. Black often plays 11... $\mathbb{Q}d6$  and is prepared to go into an endgame with doubled pawns. If 11... $\mathbb{Q}e2$  h6 12... $\mathbb{Q}h4$ , then 12... $\mathbb{Q}d6=$ .

**11...h6 12... $\mathbb{Q}h4$   $\mathbb{Q}e7!$ ?**

A passive move.

After 12... $\mathbb{Q}b8$  comes 13.c3  $\mathbb{Q}d6$  14... $\mathbb{Q}c2!?$  c5!? 15... $\mathbb{W}d3$  g6 16.b3± A.Dreev – A.Yusupov, Tilburg 1992.

12... $\mathbb{Q}e8!?$  would be better.

**13... $\mathbb{Q}e1$   $\mathbb{Q}e6$**

**Diagram 15-11**

**14.c3!**

White is preparing a powerful regrouping:  $\mathbb{Q}c2$  then  $\mathbb{W}d3$ .

**14... $\mathbb{Q}e8$  15... $\mathbb{Q}c2$   $\mathbb{Q}b8!?$**

15... $\mathbb{Q}d7$  16... $\mathbb{Q}xe7$   $\mathbb{W}xe7$  17... $\mathbb{W}d3$  g6 (17... $\mathbb{Q}f6$  18... $\mathbb{W}d4$  Δ $\mathbb{Q}c5$ ) 18... $\mathbb{Q}e3\pm$  would be better.

**16... $\mathbb{W}d4!\pm$**

This is even stronger than  $\mathbb{W}d3$ . White is fighting for the c5-square.

**16...a5**

Or else b2-b4 would be possible.

**17... $\mathbb{Q}e3!$**

This prepares to double rooks on the open e-file.

**17... $\mathbb{W}c7$  18... $\mathbb{Q}ae1$  c5 19... $\mathbb{W}d3$  g5?**

**Diagram 15-12**

Black unnecessarily weakens his castled position and is immediately punished for it. Better is 19... $\mathbb{Q}f8\pm$ .

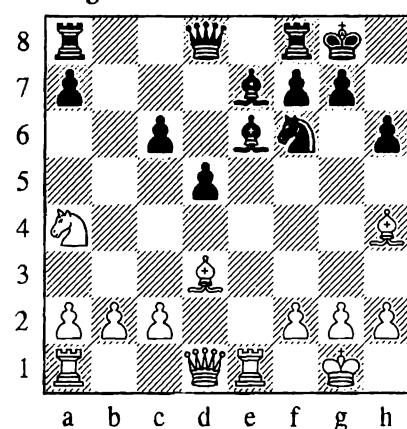

**20... $\mathbb{Q}g3$   $\mathbb{Q}d6$  21... $\mathbb{Q}xe6$ !**

Black had overlooked this. If now 21... $\mathbb{Q}xe6$  22... $\mathbb{Q}xe6$  fxe6 (22... $\mathbb{Q}xg3$  23... $\mathbb{Q}xf6\pm$ ), then simply 23... $\mathbb{Q}xd6$   $\mathbb{W}xd6$  24... $\mathbb{Q}g6\uparrow$   $\mathbb{Q}f8$  25... $\mathbb{W}xf6\uparrow$   $\mathbb{Q}e8$  26... $\mathbb{Q}xc5\pm$ .

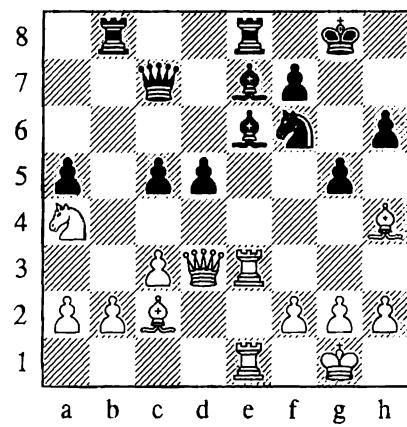

Black resigned.

We have simply considered a few of the main continuations. Later you will have to deepen your knowledge. After you have solved the exercises, please look very carefully through all the sample games, **playing them over on a board**. # Destroying the castled position

*Destroying the castled position* is an important method of attack. Grandmaster Alexander Kotov wrote:

'If you cannot invade the opposing camp or rip the king out of its hiding place, there still remains the method of storming the king's fortress directly and annihilating its loyal defenders, the chain of protecting pawns. Such a process is reminiscent of the taking by storm of a castle wall in the Middle Ages. After the disappearance of the protecting wall of pawns, exposed points and breaches appear, into which the attacking forces immediately rush.'

We have already looked at some typical combinations aimed at destroying the castled position (e.g. the bishop sacrifice on h7). In this chapter we shall study a few more motifs.

### Sacrifice on h6

Diagram 16-1

R.Keene – S.Kerr

Sydney 1979

The defensive move h7-h6 can be useful in providing the black king with a bolthole to prevent a back rank mate and in stopping the opposing pieces from occupying the g5-square. However, this move often leads only to a weakening of the castled position and may allow a dangerous sacrifice on h6.

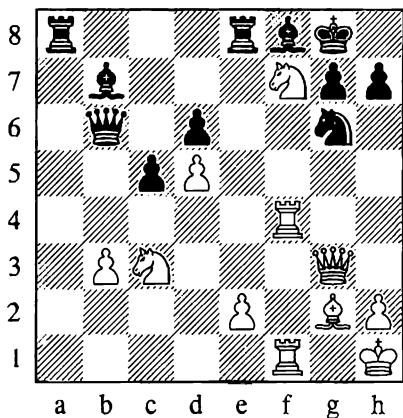

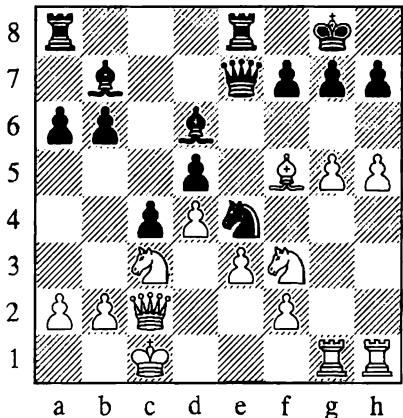

Diagram 16-10

A. Rubinstein – R. Teichmann

White needs open lines. Rubinstein's typical sacrifice can probably not be calculated out to the very end; you simply have to have confidence in the attacking possibilities.

3...dxe4 4.h6!!

On the other hand, 4...exf3? 5.gxf7†  $\mathbb{W}xf7$

8... $\mathbb{W}e6$  loses to 9. $\mathbb{W}h5+–$ .

### 9. $\mathbb{E}xe7+–$

Black was hoping for 9.bxc3?  $\mathbb{Q}a3†$  10. $\mathbb{Q}d2 \mathbb{W}e6$   
11. $\mathbb{E}h8† \mathbb{Q}g7!$  with a repetition of moves.

Now after 9... $\mathbb{E}xe7$  (9... $\mathbb{E}xe7$  10. $\mathbb{W}e6†+–$ )  
10. $\mathbb{E}h1+–$  White wins easily. Also good would be  
simply 10. $\mathbb{W}xf6+–$ .

### 1.a4! c4

If 1... $\mathbb{Q}xb4$ , then 2.a5  $\mathbb{E}ac8$  3. $\mathbb{W}a2 \mathbb{Q}a8$  4. $\mathbb{Q}xb4!$ .

### 2. $\mathbb{Q}a2 \mathbb{Q}c6$ 3.a5 $\mathbb{Q}a4$ 4. $\mathbb{W}c1$

White sacrifices the exchange in order to weaken  
Black's castled position.

### 4... $\mathbb{Q}c8?$ !

Probably a better line would be 4... $\mathbb{E}xd1$  5. $\mathbb{E}xd1$   
 $\mathbb{Q}a4$  6. $\mathbb{E}xh6 \mathbb{Q}xh6$  7. $\mathbb{W}xh6 \mathbb{E}ac8$ .

6... $\mathbb{Q}f6$  7. $\mathbb{E}xg7 \mathbb{Q}xg7$  8. $\mathbb{Q}h4$  is very dangerous.  
But 6... $\mathbb{E}a7$  7. $\mathbb{Q}xc4†$  would be better.

White now exploits the fact that the black knight  
is hanging.

With the threat of  $\mathbb{E}xd6$  and then  $\mathbb{Q}f5†$ .

### 9... $\mathbb{Q}h7$ 10. $\mathbb{Q}h4$

And Black resigned, in view of 10... $\mathbb{E}g8$  (or  
10... $\mathbb{Q}f8$  11. $\mathbb{Q}xg6!+–$ ) 11. $\mathbb{Q}xc4 \mathbb{E}g7$  12. $\mathbb{E}xd6 \mathbb{W}xd6$

## An opening repertoire against 1.e4

We are building our defensive repertoire against 1.e4 on the *Petroff Defence*. It is a solid choice which has one advantage: Black determines the opening after 2.Qf3. This means that we need only consider as deviations the *Bishop's Opening* (2.Qc4), the *Vienna Game* (2.Qc3) and of course also the *King's Gambit*. You will find examples of these openings in the training exercises.

Let us now look at the main lines of the Petroff Defence. After 2.Qf3 Qf6 there are, as well as the *Four Knights Game* (3.Qc3 Qc6), two main variations: A) 3.d4 and B) 3.Qxe5.

Of course we cannot study all of the theory related to the Petroff Defence in two hours, so we shall concentrate only on some main lines.

### A) 3.d4

Bad Homburg 1998

1.e4 e5 2.Qf3 Qf6 3.d4 Qxe4 4.Qd3 d5 5.Qxe5 Qd7

5...Qd6 is also good and can lead to the same position.

### Diagram 17-1

#### 6.Qxd7

After 6.Qe2 Black can sacrifice a pawn, obtaining excellent compensation in return. The bishop pair and the possibilities for an attack on the kingside will make up for the slight material deficit.

Diagram 17-3

### 10. $\mathbb{W}h5$

The queen move to h5 is the only active idea for White if he wants to fight for an advantage.

10. $\mathbb{Q}c3$   $\mathbb{Q}xc3$  11.bxc3 0–0 12. $\mathbb{W}h5$  is the alternative. Black can play 12...g6 with the idea of 13. $\mathbb{W}xd5$   $\mathbb{Q}c7!$ . However, ex-FIDE World Champion Ponomariov found a stronger continuation: 12...f5 13. $\mathbb{E}e1$   $\mathbb{W}c7$  14. $\mathbb{Q}d2$   $\mathbb{E}ae8$  15. $\mathbb{Q}c2$  g6 16. $\mathbb{W}f3$ , see Ex. 17-1.

### 10...0–0!

A typical sacrifice in the Petroff Defence. Black obtains a strong initiative.

11. $\mathbb{W}xd5$   $\mathbb{Q}c6$  12. $\mathbb{W}h5$  g6 13. $\mathbb{W}h3$

The best place for the queen.

After 13. $\mathbb{W}d1$  comes 13... $\mathbb{W}h4!$  14.g3?  $\mathbb{Q}xg3$  15.fxg3  $\mathbb{W}xd4\#$  16. $\mathbb{E}f2$   $\mathbb{Q}c5+$ .

If 13. $\mathbb{W}h6$ , then 13... $\mathbb{E}e8!$  planning  $\mathbb{Q}f8$ .

13... $\mathbb{Q}b4?$

Diagram 17-4

Black puts pressure on the d4-pawn. 13... $\mathbb{Q}g5?$  is also possible.

### 14. $\mathbb{Q}e3$

14. $\mathbb{Q}c3$   $\mathbb{Q}xc3$  15. $\mathbb{Q}xe4=$

14... $\mathbb{E}e8$  15.a3  $\mathbb{Q}a5$

But not 15... $\mathbb{W}a5?$  16.axb4  $\mathbb{W}xa1$  17.b5  $\mathbb{Q}d5$  18. $\mathbb{Q}c3+$ .

### 16. $\mathbb{E}c1!$

Preparing  $\mathbb{Q}c3$ .

16... $\mathbb{E}c8!$  17. $\mathbb{W}h6?$

After 17. $\mathbb{Q}c3$  there follows 17... $\mathbb{Q}d7!=$ .

17. $\mathbb{Q}xe4?$   $\mathbb{Q}xe4$  18. $\mathbb{Q}c3$  (18. $\mathbb{E}xc8$   $\mathbb{W}xc8$  19. $\mathbb{W}xc8$ =) 18... $\mathbb{Q}xc3$  19. $\mathbb{E}xc3$   $\mathbb{Q}xc3$  20.bxc3 would be stronger. White does not have a significant advantage in this position, since his pawns are safely blockaded.

17... $\mathbb{Q}b6!$  18. $\mathbb{Q}c3$

Diagram 17-5

18... $\mathbb{Q}xf2!!$

The sacrifice is forced, but good. On the other hand 18... $\mathbb{Q}xd4?$  would be bad, on account of 19. $\mathbb{Q}xe4!$  (19. $\mathbb{Q}xe4$   $\mathbb{Q}g7!$ ) 19... $\mathbb{Q}xe4$  20. $\mathbb{E}d1$   $\mathbb{Q}xe3$  21. $\mathbb{W}xe3$   $\mathbb{W}b6$  22. $\mathbb{W}xb6$  axb6 23. $\mathbb{E}d4\pm$  with the idea of  $\mathbb{E}b4$ .

## Opening 3

### 19. $\mathbb{Q}xf2$

If 19.  $\mathbb{Q}xf2$ , then 19...  $\mathbb{Q}xd4!$  20.  $\mathbb{E}e1$   $\mathbb{Q}xc3\#$ .

### 19... $\mathbb{Q}xd4$ 20. $\mathbb{E}d1!$

The only defence.

20.  $\mathbb{W}d2?$  loses after 20...  $\mathbb{Q}xf2\#$  21.  $\mathbb{Q}xf2$   $\mathbb{W}d4\#$   
22.  $\mathbb{Q}f1$   $\mathbb{E}e3$  23.  $\mathbb{E}d1$   $\mathbb{E}d8-$ .

20.  $\mathbb{Q}d1?$  is bad, in view of 20...  $\mathbb{E}e1\#$  21.  $\mathbb{Q}f1$   $\mathbb{Q}b5$   
22.  $\mathbb{Q}c3$   $\mathbb{Q}xf2\#$  23.  $\mathbb{Q}xf2$   $\mathbb{W}f6\#-$ .

### 20... $\mathbb{Q}xf2\#$ 21. $\mathbb{Q}xf2$ $\mathbb{W}b6\#$

Black could also play for a win: 21...  $\mathbb{W}d4\#?$  22.  $\mathbb{Q}f1$   $\mathbb{E}e6$ , threatening  $\mathbb{E}f6\#$ , would be a riskier, but also more interesting, alternative.

### 22. $\mathbb{Q}f1$

### Diagram 17-6

#### 22... $\mathbb{W}xb2$

Here too, 22...  $\mathbb{E}e6\#?$  is possible.

#### 23. $\mathbb{W}d2!$

23.  $\mathbb{Q}c2$   $\mathbb{E}cd8$  24.  $\mathbb{W}d2$   $\mathbb{W}e5\#$  would be too dangerous.

#### 23... $\mathbb{W}xc3!=$

$\frac{1}{2}-\frac{1}{2}$

The ending after 24.  $\mathbb{W}xc3$   $\mathbb{Q}xg2\#$  25.  $\mathbb{Q}xg2$   $\mathbb{E}xc3$  is level.

### 5...d5 6.Qd3 Qc6 7.0–0 Qe7 8.c4

One very interesting variation is 8.Qe1 Qg4 9.c3 f5 10.Qb3 0–0 11.Qbd2. Black has a good way to equality: 11...Qa5!? 12.Qa4 Qc6 13.Qb5

#### Diagram 17-8

White is fighting for the e5-square. 13...Qh4! (an idea of Kramnik's) 14.g3 Qf6 15.Qxc6 bxc6 16.Qxc6 Qe8 (Black obtains a strong initiative for the pawn) 17.Qe5 Qxe5 18.dxe5 Qg5 19.f4 Qh3†! 20.Qg2 Qb8 ( $\Delta$ 21...Qb6, 22...Qa8) 21.c4□ dxc4 22.Qxc4 ( $\Delta$ b2-b3, Qc4-e3 E.Ubilava) 22...Qd3= 23.Qe3 Qxb2† 24.Qxb2 Qd2† 25.Qh1 Qf2† 26.Qg1 Qh3† 27.Qh1 Qf2†= V.Anand – V.Kramnik, Wijk aan Zee 1999.

### 8...Qf6

8...Qb4 is a more popular alternative.

### 9.Qc3

Another main variation is 9.h3 (White prevents the move Qg4) 9...Qb4 10.Qe2 dxc4 11.Qxc4 0–0 12.Qc3 Qbd5 13.Qe1 c6

#### Diagram 17-9

A typical position with the isolated d4-pawn. Now:

a) If 14.Qb3 Qb6 15.Qd3 Qe6 16.Qc2, then 16...h6 17.a3 Qbd5 18.Qd2 Qc8? (a good idea) 19.Qa4 Qc7 20.Qe2 Qd6 21.Qac1 Qh5!= ( $\Delta$ Qf4) 22.Qh7† Qh8 23.Qf5 Qhf4 24.Qxf4 Qxf4 25.Qe3 Qd5 26.Qe2 Qf4 27.Qe3  $\frac{1}{2}$ – $\frac{1}{2}$  B.Gelfand – A.Yusupov, Istanbul Olympiad 2000.

b) 14.Qg5 The best try, but Black can also hold this position comfortably. 14...Qe6 15.Qb3 Qb6! 16.Qxb6 axb6 17.Qxd5 cxd5 18.Qb3

#### Diagram 17-10

18...Qb4! 19.Qe5 (19.Qe2 Qe4=) 19...Qd7 20.Qe2 Qfc8 21.Qc1 Qb8? 22.Qd3 Qc6 23.Qxb4 Qxb4 24.g4 h6 25.Qf4 g5 26.Qe3 Qd7 27.a3  $\frac{1}{2}$ – $\frac{1}{2}$  R.Kasimdzhanov – D.Fridman, Essen 2002.

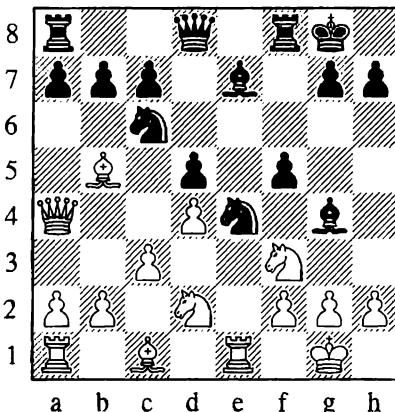

### 9...Qe6! 10.cxd5

10.c5 Qg4?! with pressure against d4.

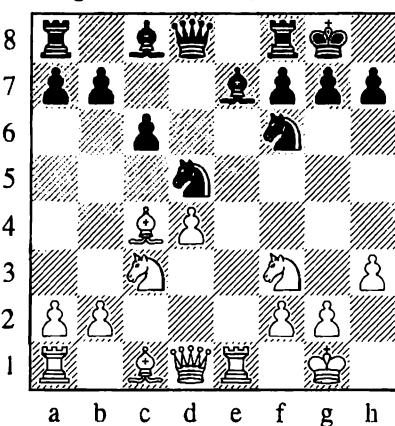

### 10...Qxd5 11.Qe1 0–0 12.a3

A complicated position. Here is another examples of Black's strategy: 12.h3 Qf6 13.Qe4 h6 14.a3 Qd7! 15.Qc2 ( $\Delta$ Qd3)

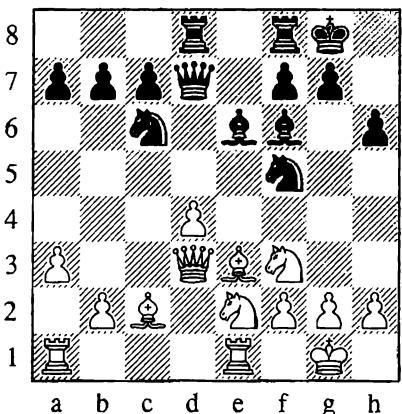

Diagram 17-11

15...Qf5! 16.Qe4 Qfe8 17.Wd3 Qe6 = ½–½ Z.Hracek – A.Yusupov, Bundesliga 1996.

12...Qf6 13.Qe4 h6

13...Qce7?

14.Qc2

By threatening Wd3, White tries to punish the weakening of the castled position by h7-h6. But Black has sufficient defensive resources.

If 14.Wd3 Qce7 15.Qd2 c6 16.Qad1 Qc8 17.h3, then 17...Qxc3 18.bxc3 b5= S.Movsesian – A.Yusupov, European Team Ch, Batumi 1999.

14...Qde7?!

The alternative is 14...Qce7.

15.Qe3

After 15.Wd3? there follows 15...Qf5.

Diagram 17-12

15...Qf5!

Black obtains good counterplay against the pawn on d4.

16.Qe2

Other moves are not dangerous:

a) 16.Wd3 Qxd4

b) 16.d5 Qxc3 17.dxe6 Qxe1

c) 16.Qxf5 Qxf5 17.d5 Qe5 18.Qxe5 Qxe5

19.Qd4=

16...Wd7 17.Wd3 g6?!

17...Qad8! would be more accurate.

Diagram 17-13

White cannot yet make use of the b1-h7 diagonal:

a) After 18.g4 there follows 18...g6! 19.gxf5 Qxf5 20.Wc3 Qxc2 21.Wxc2 Wxg4†=.

b) If 18.Qg3, then simply 18...g6.

c) 18.Qad1 g6, see the game.

d) 18.Qf4 Qcxd4 19.Qxd4 Qxd4 20.We4 (20.g4 Wc6!) 20...g6 21.Qxe6 Wxe6=

18.Qad1?!

GM Kotronias has suggested the improvement 18.Qf4?:

a) After 18...Qcxd4 there comes 19.Qxd4 (not much is achieved by 19.Qxd4 Qxd4 20.Qxd4 Qxd4, and now 21.Qad1 Qf5 or 21.Qxe6 fxe6 22.Wxg6† Wg7) 19...Qxd4 20.Qxe6 fxe6 and here White has a surprising tactical shot: 21.Qxe6† (21.Wxg6† Wg7 is not so strong).

b) 18... $\mathbb{Q}xe3$  19. $fxe3$   $\mathbb{Q}f5$  20. $\mathbb{W}b3$   $\mathbb{Q}xc2$  21. $\mathbb{W}xc2$   
 $\mathbb{E}ad8$  (21... $\mathbb{Q}e7$  22. $\mathbb{E}ad1$   $\mathbb{Q}f5$  23. $\mathbb{W}b3$ ) 22. $\mathbb{E}ac1!$   
 (compared to the game White gains a tempo)  
 22... $\mathbb{E}fe8$  23. $\mathbb{Q}d3\pm$

**18... $\mathbb{E}ad8$  19. $\mathbb{Q}f4$   $\mathbb{Q}xe3$  20. $fxe3$   $\mathbb{Q}f5$**

**Diagram 17-14**

The position remains balanced.

21. $\mathbb{W}b3$   $\mathbb{Q}xc2$  22. $\mathbb{W}xc2$   $\mathbb{E}fe8=$  23. $\mathbb{E}c1$   $\mathbb{E}e7$  24. $\mathbb{W}c5$   
 $\mathbb{E}e4$  25. $\mathbb{Q}d3$   $\mathbb{E}de8$  26. $\mathbb{Q}f2$   $\mathbb{E}4e7$  27. $\mathbb{E}cd1$   $\mathbb{W}d6$   
 28. $\mathbb{W}c3$   $\mathbb{E}d7$  29. $\mathbb{W}d3$   $\mathbb{W}e7$  30. $\mathbb{W}b5$   $\mathbb{Q}d8$  31. $e4$   $c6$   
 32. $\mathbb{W}c4$   $\mathbb{Q}e6$  33.d5?!

33. $e5$   $\mathbb{Q}g7$  34. $\mathbb{Q}e4$   $\mathbb{E}ed8$  35. $b4=$  would be better.  
 After the game move 33... $\mathbb{Q}g5!$  would be correct with somewhat better chances for Black.

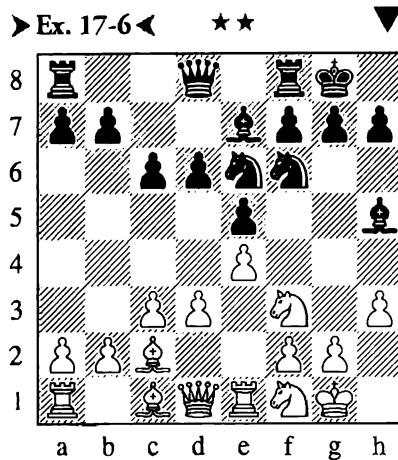

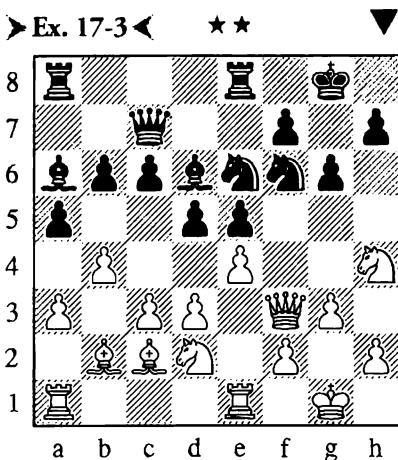

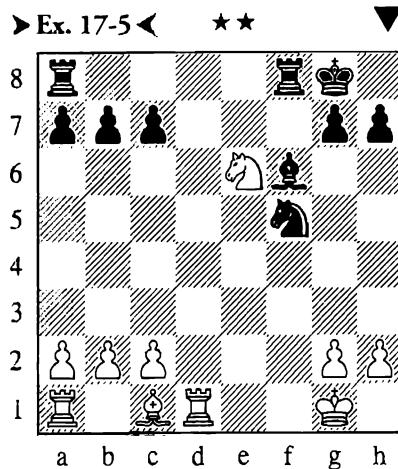

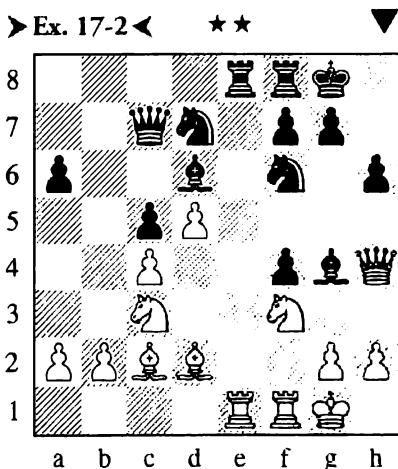

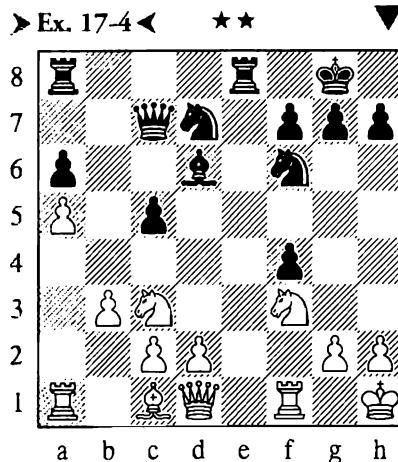

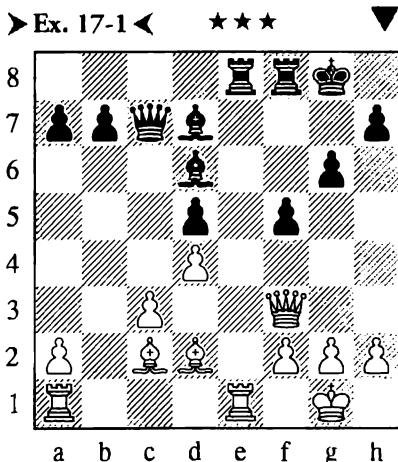

In the test you will find a lot of useful strategic ideas and important variations. It is not so crucial to find a neat solution to all the positions; some of them are very difficult. **What is much more important is that you later go on to study with great care the solutions and the corresponding games.** Try also to widen your opening knowledge by following the games of strong players using these openings.

Of course you do not absolutely have to play the Petroff Defence and the variations which have been indicated. Perhaps you are already happy with your own repertoire. In that case you should change nothing. This lesson is simply an example of how one can construct one's own repertoire.

## Ex. 17-1

P.Svidler – R.Ponomariov

Moscow 2001

1... $\mathbb{B}e4!$

(3 points)

A very strong positional sacrifice. Otherwise White could exert more pressure against the pawn on d5.

Just 1 point for the modest move 1... $\mathbb{B}c6$ . After 1... $\mathbb{B}xh2\#$  (also 1 point) 2. $\mathbb{B}h1$   $\mathbb{B}d6$  there comes 3. $\mathbb{B}b3$ . Both of these variations lead to a slight advantage for White.

2. $\mathbb{g}3?!$

Better is 2.h3=. On the other hand, 2. $\mathbb{B}xe4$ ?  $\mathbb{fxe}4$  3. $\mathbb{B}e2$   $\mathbb{B}xh2\#$  is not good.

## Exchanging

*Exchanging* is perhaps the most important element in positional play. In many games we can see a whole variety of exchanging operations. But frequently an exchange changes the situation on the board in favour of one or other player. Recognizing such situations is the art of the positional player. It is amazing how many advantages you can acquire as a result of skilful exchanges.

### I.Boleslavsky – V.Smyslov

USSR Ch, Leningrad 1948

**1.e4 e5 2.Qf3 Qc6 3.Qb5 a6 4.Qa4 d6 5.c4**

An ambitious variation. White wants to seize the whole centre after  $\mathbb{Q}c3$  and  $d4$ .

**5...Qg4**

Black fights for the centre and tries to control the  $d4$ -square. For that reason he must pin the knight on  $f3$  or exchange it.

**6.Qc3 Qf6 7.h3**

Diagram 18-1

**7...Qxf3**

You need to be particularly careful when exchanging a bishop for a knight, since bishops frequently offer more long-term prospects. But here the knight on  $c6$ , which is looking to occupy the  $d4$ -square, is in no way inferior to the light-squared bishop.

**8.Wxf3 Qe7 9.Qe2 0-0 10.Qxc6 bxc6 11.d4?!**

White overestimates his position.  $11.0-0$   $c5$  would be a more prudent option, after which Black intends  $\mathbb{Q}d7-b8-c6-d4$ . The position would remain balanced.

**11...d5!**

White has not yet castled. It is for that reason that Black's play in the centre is so unpleasant.

**12.dxe5**

After  $12.\mathbb{Q}xd5$  comes  $12...e4$   $13.\mathbb{W}c3 \mathbb{Q}xd5\#$ .

**12...Qb4† 13.Qc3 Qxe4 14.0-0**

Diagram 18-2

Which pieces should be exchanged and which should not? Only a few players take the trouble to

answer such questions. But it appears that Smyslov always finds the correct answer.

**14...♞xc3!**

The knight is very well placed in the centre. In such situations it is better than the bishop.

**15.bxc3 ♜e7**

White has weaknesses on c3 and e5.

**16.cxd5 cxd5**

**Diagram 18-3**

**17.c4!**

A good operation. White swaps off his weak pawns.

17.♘f4? would be bad, due to 17...g5! 18.♗e3 (18.♗g3 ♖d2+) 18...♜xe5+. Also bad is 17.♗e3? ♜xe5 18.f3 ♜xc3+.

**17...♜xe5 18.♘f4**

**Diagram 18-4**

**18...♝c3!**

Smyslov finds a way to liquidate into a somewhat superior endgame.

**19.cxd5**

But not 19.♗xc3 ♞xc3, which introduces the threat of ♗e2†.

**19...♝xf3 20.gxf3**

The white kingside has been weakened. This is serious because knights are usually very good when playing against pawn weaknesses, and here the black knight will have available some strong posts (e.g. f5) on the kingside.

**20...♛c3 21.♕xc7 ♔xd5 22.♗g3**

**Diagram 18-5**

**22...♝fc8!†**

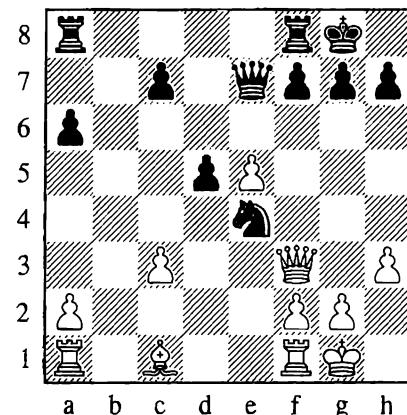

Black has a slight but very secure advantage. Smyslov now finds the key to the position. He exchanges one pair of rooks and keeps the other one! He then brings the rook to c5, an ideal position from which to support the knight in the centre. The rook can later go to a5 to attack the a2-pawn and to protect its own pawn on a6!

22...♝ac8 would be worse: 23.♗fd1 and Black cannot play 23...♝c5 due to 24.♗d6.

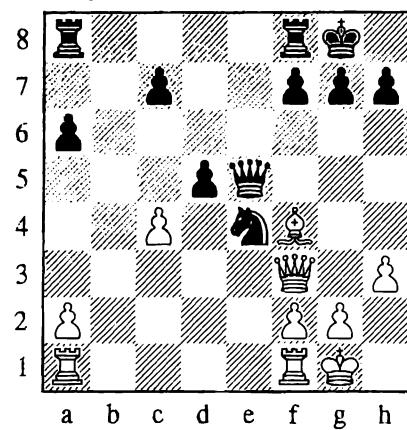

**23.♗fd1 ♚c5 24.♗d2 h6**

Smyslov plays very carefully. 24...f6 would be riskier, because White could possibly counterattack via the 7th rank.

**Diagram 18-3**

**Diagram 18-4**

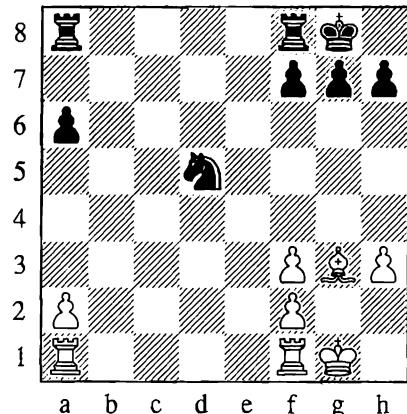

Diagram 18-6

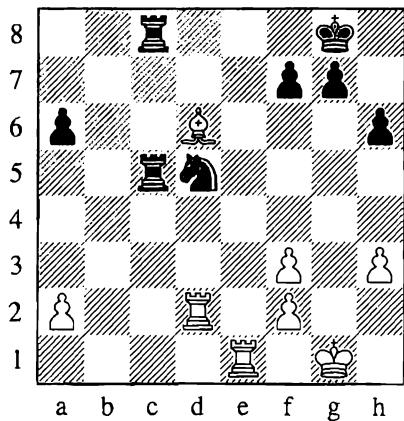

Diagram 18-7

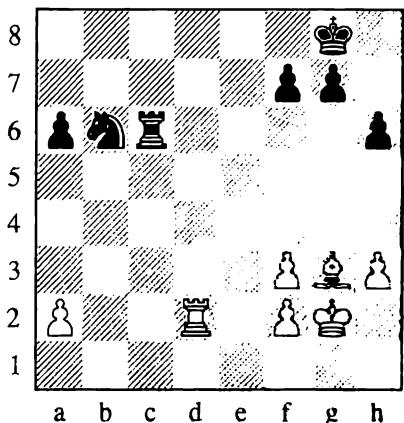

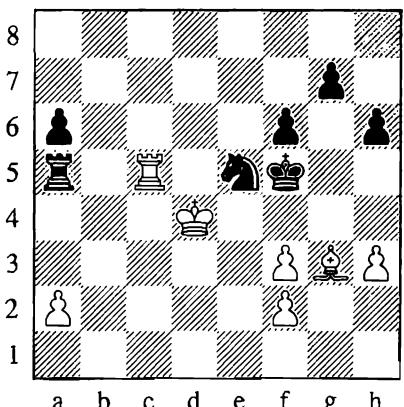

Diagram 18-8

25.  $\mathbb{E}e1 \mathbb{E}ac8$  26.  $\mathbb{Q}d6?!$

Diagram 18-6

Boleslavsky was a strong player, but here his handling of the question of exchanges was faulty and he was punished for it.

Black wants to exchange a pair of rooks – White should be thinking the opposite and avoiding such an exchange. So the correct move would have been 26.  $\mathbb{E}g2??$

26...  $\mathbb{E}c1! \mp$

With an exchange of rooks, any potential counterplay disappears. Black can make good use of the remaining rook to attack White's weaknesses.

This standard evaluation can be of further use to us in similar situations.

27.  $\mathbb{E}xc1 \mathbb{E}xc1\#$  28.  $\mathbb{Q}g2 \mathbb{Q}b6$  29.  $\mathbb{Q}g3 \mathbb{E}c6$

Diagram 18-7

30.  $\mathbb{Q}f1?!$

The final chance for a defence consisted of a second exchange of rooks, after which White can then, after 30.  $\mathbb{E}d6 \mathbb{E}xd6$  31.  $\mathbb{Q}xd6$  f5 32. f4  $\mathbb{Q}f7$  33.  $\mathbb{Q}f3\#$ , simply hope that Black's clear advantage is not enough for victory.

30... f6 31.  $\mathbb{Q}e2 \mathbb{Q}f7$  32.  $\mathbb{Q}d3 \mathbb{E}c5!$

Smyslov finds the most active positions for his pieces. The rook is heading for a5.

33.  $\mathbb{E}b2 \mathbb{Q}d7$  34.  $\mathbb{Q}d4 \mathbb{E}a5$  35.  $\mathbb{E}c2 \mathbb{Q}e6$  36.  $\mathbb{E}c6\#$   $\mathbb{Q}f5$  37.  $\mathbb{E}c7 \mathbb{Q}e5?!$

Since at this point a rook ending is lost on account of the numerous white weaknesses, Smyslov brings the knight into the centre. In time trouble he overlooks the simple winning move 37...  $\mathbb{E}xa2!..$

38.  $\mathbb{E}c5$

Diagram 18-8

Now White tries to exchange the rooks. If 38.  $\mathbb{E}xg7$ , then 38...  $\mathbb{Q}xf3\#$  39.  $\mathbb{Q}e3 \mathbb{E}a3\#$  40.  $\mathbb{Q}e2 \mathbb{Q}d4\#$  41.  $\mathbb{Q}f1 \mathbb{E}xa2-+.$

38...  $\mathbb{E}a3!$

Because of the threat of  $\mathbb{E}d3\#$ , White has no time for f3-f4 and must go into a hopeless ending.

Of course not 38...  $\mathbb{E}xc5?$  39.  $\mathbb{Q}xc5\#$  and White can attack the pawn on a6.

Nor would 38...  $\mathbb{E}a4\#$  39.  $\mathbb{Q}c3 \mathbb{E}a3\#$  40.  $\mathbb{Q}b4 \mathbb{E}xf3$  be so good, in view of 41. a4 g5 42.  $\mathbb{Q}a5$  ( $\mathbb{X}a6$ ) 42... h5 43. h4#.

**Diagram 18-9****39.♕xe5 ♜a4†**

The point.

**40.♝c4?!**

40.♗e3 would be somewhat tougher, but after 40...fxe5 41.♖c2 ♜a3† 42.♗e2 a5 43.♗d2 g6 44.♗c2 h5 45.♗b2 ♜c3+ and then ♜f4, Black could win without any problems.

**40...fxe5† 41.♗d5 ♜xa2→+**

There would also be a simple win after the transition to a pawn ending by 41...♜xc4 42.♗xc4 ♜f4→+.

**42.♝g4 g5**

Smyslov outplayed his opponent by skilfully managing the exchanges.

**0–1****Diagram 18-10****E.Lobron – A.Yusupov**

**Question:** Which piece should Black exchange?

**Answer:** The white queen is blockading the queen-side. If White can open the c-file too, then the black c-pawn will be very weak. Black must act at once and exchange off the dangerous piece, in order to prepare the strategically necessary c7-c5.

**2.c3 bxc3 3.bxc3**

Or 3.♗xc3 ♜fb8=.

**3...♜a7! 4.♜xa7**

If 4.♕xe6 fxe6 5.♗d6, then 5...♝f7!† and the white queen is in danger.

**4...♜xa7 5.♗c2 c5**

If 5...♜b8?!, then 6.♗fb1 ♜ab7 7.♗xb7 ♜xb7 8.♗b3 followed by ♜c5±.

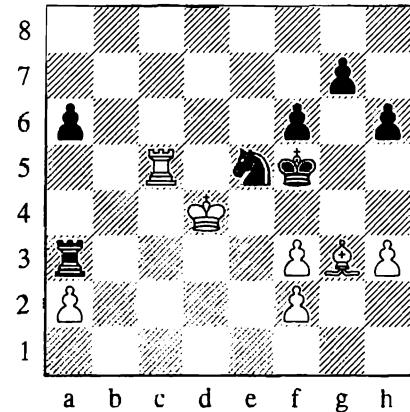

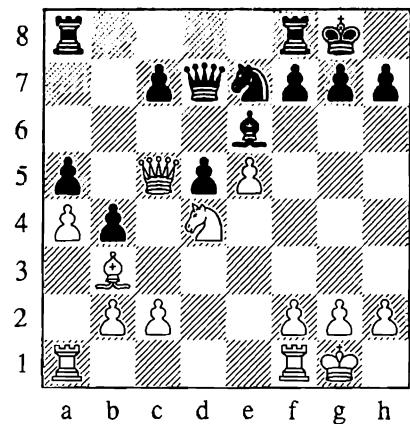

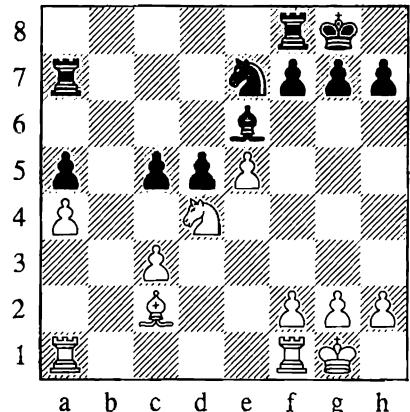

**Diagram 18-11****6.♗xe6?!**

I do not like this exchange; it simply strengthens the black pawn chain. The knight will find a job to do, but what about its counterpart, the c2-bishop?

Either 6.♗b3 or 6.♗b5 would be better.

**6...fxe6 7.♗ab1**

7.♗fb1 was required and White could perhaps still keep the position level.

**Diagram 18-9****Diagram 18-10****Diagram 18-11**

### Positional play 3

**7...♝f4!**

7...♝g6?! would not be so good.

**8.♝b8†**

White is playing very actively. Instead he should think about his defence and play 8.♝fe1.

**8...♛f7 9.♝e1**

Not 9.♜xh7? due to 9...g6.

**9...g6 10.♝e3 d4 11.♝h3**

The white attack is very uncoordinated and Black can easily fend it off. Then White runs the risk that his pieces will be left in isolated posts.

**11...♝g7 12.♝b5?**

White cannot solve the complicated problems in time trouble. The correct idea would be 12.cxd4 c4! (Δd5) 13.♝b6! ♜xd4 14.♝xe6 ♜d5 15.♝d6 ♜e7 16.f4 ♜xf4 17.♝xd4 ♜e2† 18.♚f2 ♜xd4 19.♝c3 and White should be able to hold the position.

**12...♞d5!**

Activating the knight. 12...c4 13.g3 ♜f3 14.cxd4 ♜c3∞ would not be so clear.

**13.g3**

After 13.♝xc5 comes 13...dxc3†. If 13.cxd4, then 13...c4=.

**13...♜f3 14.cxd4 ♜af7!**

Now Black counterattacks. His pieces cooperate very well.

**15.♝xc5 ♜xf2 16.♞d3 ♜d2 17.g4?**

17.♝xd5 would be more stubborn.

**17...♞d1†→**

White resigned. If 18.♝g2, then 18...♞f4†.

Every exchange should be weighed up carefully. Perhaps it will be to the advantage of our opponent...

**Diagram 18-12**

**6...cxd4?!**

A typical mistake. Why does Black exchange pawns? White is the only one to gain anything from it. He gets a semi-open e-file and it is easier

**Diagram 18-12**

for him to control the central squares e4 and e5. He can possibly even employ his bishop on the c1-g5 diagonal. As a guide to decision making in such situations, we should consider which of the pieces was the more active. The c5-pawn was attacking, whereas the white e3-pawn was only playing a defensive role.

Simply 6... $\mathbb{Q}c6$  would be better.

**7.dxe4±  $\mathbb{Q}c6$  8.0-0  $\mathbb{Q}e7$**

Better is 8... $\mathbb{W}c7!?$ .

**9. $\mathbb{Q}e5!$   $\mathbb{Q}xe5?!$**

If 9... $\mathbb{W}c7$ , then 10.f4±.

**10.dxe5  $\mathbb{Q}d7$  11. $\mathbb{W}g4!$  g6 12. $\mathbb{B}e1±$  h5 13. $\mathbb{W}e2$   $\mathbb{Q}f8$**

And here White should simply play 14. $\mathbb{B}b2$ . After 14... $\mathbb{W}c7$  15. $\mathbb{Q}d2$  b6 16.c4 he is clearly better.

The next game is another masterclass in when to exchange, conducted by Smyslov.

**Diagram 18-13**

**2... $\mathbb{W}d7$**

Or 2... $\mathbb{W}xh4$  3.gxh4 and Black loses a pawn without any compensation.

**3. $\mathbb{W}d8†!$   $\mathbb{W}xd8$  4. $\mathbb{Q}xd8$   $\mathbb{Q}d7$  5. $\mathbb{Q}c7$   $\mathbb{Q}c5$  6. $\mathbb{B}xd6+–$**

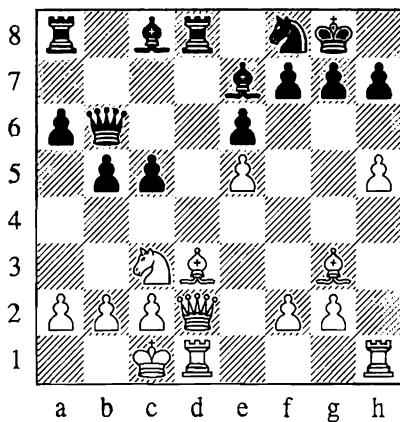

To understand this theme even better, I would recommend that you **study the games of grandmasters with their own annotations. Consider carefully why this or that exchange is played.** Also take a really close look at your own games. Concentrate on the important moments at which exchanges were made and consider which side really benefited from these exchanges.

## Ex. 18-1

V.Kupreichik – M.Taimanov

USSR Ch, Moscow 1976

The threat is c5-c4, yet White can not only parry the threat, but also swap off the good defensive piece, the dark-squared bishop on e7.

1.  $\mathbb{Q}h4!$

(2 points)

1...  $\mathbb{Q}xh4$

After 1...  $\mathbb{W}c7?$  comes 2.  $\mathbb{Q}xe7$   $\mathbb{W}xe7$   
3.  $\mathbb{Q}xh7\#$ .

2.  $\mathbb{B}xh4$   $\mathbb{Q}b7$

2...c4? 3.  $\mathbb{Q}xh7\#$

3.  $\mathbb{E}g4$  g6 4.  $\mathbb{W}g5$   $\mathbb{E}d7$  5.  $\mathbb{B}h1$   $\mathbb{W}d8$  6.  $\mathbb{W}h6\#$

## Ex. 18-2

V.Makogonov – M.Botvinnik

Sverdlovsk 1943

1...  $\mathbb{Q}xc3!$

(1 point)

1 point for 1...  $\mathbb{Q}f5?!$ .

In the white position the light squares are weak. So Black should exchange off those white minor pieces which can defend the said squares.

2.  $bxc3$   $\mathbb{Q}f5!$

(1 point)

The exchanges allow Black to exploit the weakness of e4.

3.  $\mathbb{Q}xf5$   $\mathbb{W}xf5$  4. g4?!  $\mathbb{W}e6$  5.  $\mathbb{Q}a3$   $\mathbb{Q}e4\#$

White is left with his bad bishop.

Zürich 1953

1.  $\mathbb{Q}e4!$

(1 point)

1...  $\mathbb{Q}xe4$  2.  $\mathbb{E}xd7$

The exchange has exposed Black's weaknesses on g4 and b7.

2...  $\mathbb{Q}c5$

Better is 2... b5!±, since 3.  $\mathbb{Q}xg4?$  can be met by 3...  $\mathbb{Q}f6$ .

3.  $\mathbb{E}c7$   $\mathbb{Q}e6$  4.  $\mathbb{E}xb7+$

5.  $\mathbb{W}xe5\#$

## Ex. 18-6

P.Popovic – Y.Razuvaev

Novi Sad 1982

1...  $\mathbb{Q}e5!$

(2 points)

This exchange leads to a clear advantage for Black, since the white pawns are decidedly weak.

2.  $\mathbb{Q}xe5\#$

If 2.  $\mathbb{Q}d2$ , then 2... c4!+, but not 2...  $\mathbb{E}xb2??$  due to 3.  $\mathbb{Q}xh6\#$ .

A standard operation. However, the moves 1.g4 and 1.Qh2 (also 2 points) are worth considering too.

After 1.Qe3 (1 point) Black can reply 1...Qd7 and if 2.Qh6, then 2...Qxc3.

1.Qxf6? Qxf6 2.Wh6 would be wrong, because of 2...Wb6±.

1...e5

If 1...Qxd5, then 2.exd5± followed by the pawn advance g4-g5.

## Contents

- ✓ Active moves
- ✓ Mental flexibility
- ✓ Three important ideas
  - 1) The strongest continuation
  - 2) New candidate moves
  - 3) How and when to stop calculating

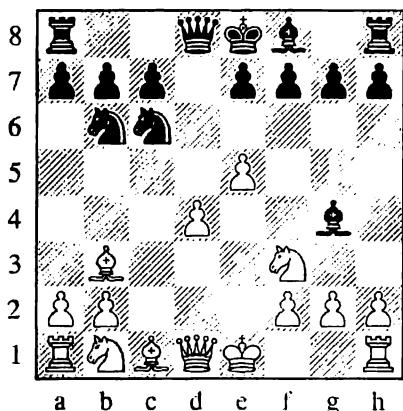

## Priorities when calculating variations

In Chapter 7 you already learned the importance of the search for good *candidate moves*. In addition, we emphasized how it was necessary to take into account firstly **all active possibilities** such as checks, possible captures and attacks. This concept is very important when we come to answer the question about which move to calculate first.

Fortunately there are no absolute rules in chess, nor any perfect algorithm for the calculation of variations. Situations at the board can vary enormously and there are of course different ways of coming to a conclusion. This **mental flexibility** is the greatest advantage we have as human beings and I see no reason why we should do without it. Naturally, the following three ideas cannot be applied universally.

**1) The most active moves also have the highest priority rating.** Perhaps we will not even need to calculate other variations at all if, for example, we find a **forced mate** or a **forced win**. Then, of course, we will save time and strength. But such forcing lines require to be calculated exactly. This method of considering first of all the strongest (most active) move is very valuable in attacking situations.

The alternatives are 7. $\mathbb{Q}e3$  and 7. $\mathbb{Q}e2$ .

7... $\mathbb{Q}g4$

Diagram 19-1

8. $\mathbb{Q}xf7\#?$

8. $\mathbb{Q}g5$  leads to perpetual check: 8... $\mathbb{Q}xd1$  9. $\mathbb{Q}xf7\#$   $\mathbb{Q}d7$  10. $\mathbb{Q}e6\#$   $\mathbb{Q}e8=$ .

8... $\mathbb{Q}xf7$  9. $\mathbb{Q}g5\#$   $\mathbb{Q}e8$  10. $\mathbb{Q}xg4$   $\mathbb{Q}xd4$  11. $\mathbb{Q}e2!!$

White must sacrifice the pawn if he really wants to play for a win.

After 11.  $\mathbb{W}xd4$   $\mathbb{Q}xd4$  12.  $\mathbb{Q}a3$  e6 13.  $\mathbb{Q}e3$   $\mathbb{Q}b4\#$   
 14.  $\mathbb{Q}f1$   $\mathbb{Q}e7! =$  the position is level.

**11...  $\mathbb{W}xe5$  12.  $\mathbb{Q}e3$   $\mathbb{Q}d5$  13.  $\mathbb{Q}f3$**

**13...  $\mathbb{W}f5$  14.0–0 e6 15.  $\mathbb{Q}c3\#$**

### Diagram 19-2

The situation is hard to evaluate. Superficially Black has a good position, but he cannot castle! So White obtains sufficient initiative for the pawn.

**15...  $\mathbb{Q}d8$**

15...  $\mathbb{Q}xc3?!$  would not be good: 16. bxc3 and White could exploit the b-file (Portisch).

On the other hand, one interesting alternative would be 15...  $\mathbb{Q}d6$  16.  $\mathbb{Q}xd5$   $\mathbb{W}xd5$  17.  $\mathbb{Q}fd1$   $\mathbb{W}f5$  18.  $\mathbb{Q}d4$   $\mathbb{Q}xd4$  19.  $\mathbb{Q}xd4$   $\mathbb{Q}e7$  20.  $\mathbb{Q}d3$   $\mathbb{Q}ad8$  21.  $\mathbb{Q}ad1!$   $\mathbb{Q}hg8$  22. g3  $\mathbb{Q}g8$  M.Gurevich – M.Drasko, Vrsac 1985.

**16.  $\mathbb{Q}fe1$**

16.  $\mathbb{Q}ac1?!$  or 16.  $\mathbb{Q}b5?!$  are also worth looking at.

**16...  $\mathbb{Q}e7$  17.  $\mathbb{Q}b5$**

Intending  $\mathbb{Q}ac1$  and then  $\mathbb{Q}xc6$  or  $\mathbb{Q}d4$ .

An alternative is 17.  $\mathbb{Q}d2?!$   $\mathbb{Q}xc3$  (17...  $\mathbb{Q}f7$  18.  $\mathbb{Q}e4$ )  
 18.  $\mathbb{Q}xc3$   $\mathbb{Q}f7$  19.  $\mathbb{W}c4$   $\mathbb{Q}f6$  20.  $\mathbb{Q}e3$  L.Albert – B.Gulko, Somerset 1986.

After 17.  $\mathbb{Q}ac1$  would come 17...  $\mathbb{Q}xc3$ .

**17...  $\mathbb{Q}xe3$**

17...  $\mathbb{Q}f6?!$  would also be interesting.

**18.  $fxe3$  a6?**

A mistake. Black should play 18...  $\mathbb{Q}d6\infty$ .

### Diagram 19-3

White now aims to punish his opponent. He calculates only the most active move and quickly establishes that he gets an advantage with it.

**19.  $\mathbb{Q}xc7\#$ !  $\mathbb{Q}d7$**

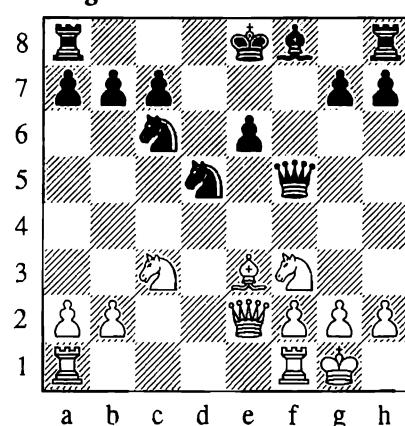

19...  $\mathbb{Q}f7$  would be bad, in view of 20.  $\mathbb{Q}d4!$   $\mathbb{Q}xd4$  21.  $\mathbb{Q}xd4$   $\mathbb{Q}f6$  22.  $\mathbb{Q}f1+-$ .

**20.  $\mathbb{Q}xa6!$   $\mathbb{Q}a8$**

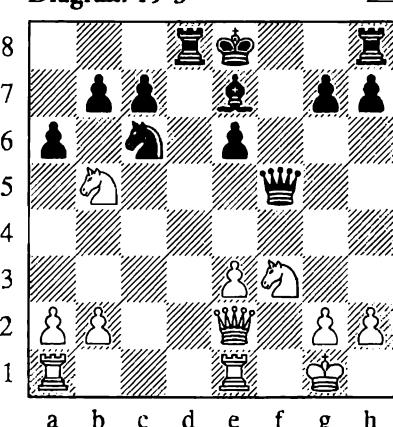

White was not able to calculate exactly what would happen after 20...  $bxa6$  21.  $\mathbb{W}xa6$   $\mathbb{Q}b8$  (21...  $\mathbb{Q}c8$ ? 22.  $\mathbb{W}b7\#$   $\mathbb{Q}c7$  23.  $\mathbb{Q}ed1\#$   $\mathbb{Q}d6$  24.  $\mathbb{Q}xd6\#$   $\mathbb{Q}xd6$  25.  $\mathbb{Q}d1\#$ +) 22.  $\mathbb{Q}ac1$   $\mathbb{Q}hc8$  (22...  $\mathbb{Q}b5?$  23.  $\mathbb{Q}xc6\#$ +) 23.  $\mathbb{Q}ed1\#$  (23.  $\mathbb{Q}xc6$   $\mathbb{Q}xc6$  24.  $\mathbb{Q}a7\#$   $\mathbb{Q}c8$  25.  $\mathbb{W}xc7\#$  would not be so clear). But he didn't have to do so! The open position of the black king and two pawns are safe enough compensation for a piece.

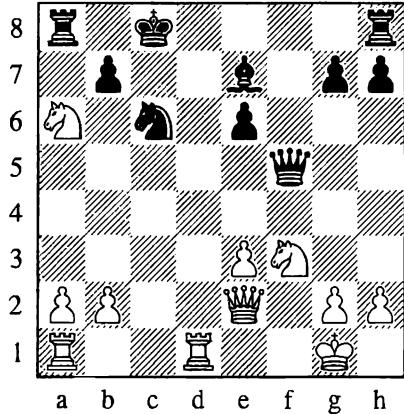

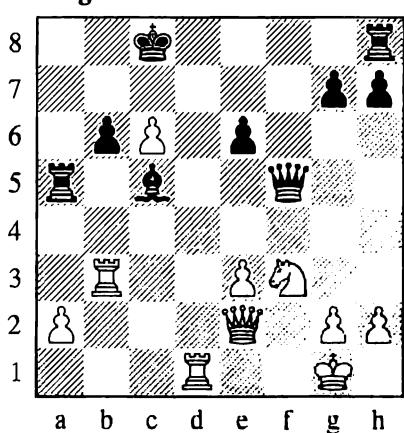

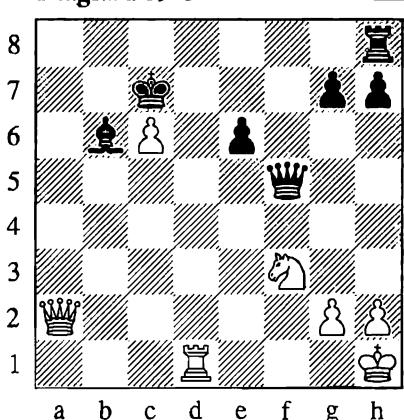

**21.  $\mathbb{Q}ed1\#$   $\mathbb{Q}c8$**

### Diagram 19-2

### Diagram 19-3

**Diagram 19-4****Diagram 19-5****Diagram 19-6****Diagram 19-4****22.b4!+-**

But White had to find this key move in his calculations before playing his 19th move. Only then could he take the c7-pawn.

**22... $\mathbb{E}xa6$** 

22... $\mathbb{E}xa6$  23. $\mathbb{E}ac1$   $\mathbb{Q}b7$  (if 23... $\mathbb{W}e4$ , then 24. $\mathbb{E}c4$ ) is refuted by 24. $\mathbb{E}xc6$ !+-.

**23.b5**

White regains his piece and is winning, since the black king's defences are completely destroyed.

**23... $\mathbb{E}a3$**

**24. $\mathbb{E}xc6$  b6 25. $\mathbb{E}ab1$   $\mathbb{Q}c5$  26. $\mathbb{E}b3$   $\mathbb{E}a5$** **Diagram 19-5****27. $\mathbb{Q}c4$ !**

Once more, White has only to calculate one variation in order to justify this dream move for him (it controls the e4-square and prepares the move  $\mathbb{Q}d4$ ).

**27... $\mathbb{E}xa2$  28. $\mathbb{E}xb6$** 

The move he had prepared, which leads to a win. But even better would be 28. $\mathbb{E}bd3$ !  $\mathbb{E}a5$  29. $\mathbb{Q}d4$  and if 29... $\mathbb{W}d5$ , then 30. $\mathbb{Q}xe6$ !  $\mathbb{W}xc6$  (30... $\mathbb{W}xc4$  31. $\mathbb{E}d8\#$  then mate) 31. $\mathbb{W}g4$ !+-.

**28... $\mathbb{Q}xe3\#$  29. $\mathbb{Q}h1$   $\mathbb{Q}xb6$** 

29... $\mathbb{W}d5$  30. $\mathbb{E}b8\#$ !  $\mathbb{Q}b8$  31. $\mathbb{W}b4\#$   $\mathbb{Q}c7$  32. $\mathbb{W}b7\#$   $\mathbb{Q}d6$  33. $\mathbb{W}d7\#$   $\mathbb{Q}c5$  34. $\mathbb{E}xd5\#$   $\mathbb{E}xd5$  35. $\mathbb{W}e7\#$  (or 35.g3  $\Delta e7$ ) 35... $\mathbb{W}xc6$  36. $\mathbb{W}xe3$   $\mathbb{E}a1\#$  37. $\mathbb{Q}g1$   $\mathbb{E}ha8$  38.h3!+- would be somewhat more complicated.

**30. $\mathbb{W}xa2$** 

White was quite sure that this position must be a win, since the black king has been left defenceless.

**30... $\mathbb{Q}c7$** **Diagram 19-6****31. $\mathbb{E}d7\#$ !**

White finds a forced win and so does not need to check out any other lines.

**31... $\mathbb{Q}xc6$  32. $\mathbb{W}a4\#$   $\mathbb{Q}c5$  33. $\mathbb{Q}d2!$** 

The point. Black can no longer defend against threats like  $\mathbb{W}c4\#$ ,  $\mathbb{Q}b3\#$  and  $\mathbb{Q}e4\#$ . The most stubborn continuation would be 33... $\mathbb{Q}d8$  34. $\mathbb{Q}b3\#$   $\mathbb{Q}b6$  35. $\mathbb{W}b4\#$   $\mathbb{W}b5$  36. $\mathbb{E}b7\#$ !+-.

**1-0**

2) If you do not find a good solution, you should either look for **new candidate moves** or lower your expectations of what can be achieved in the position and go for clearly more modest goals.

**Diagram 19-7**

N.Grigoriev

Sometimes in a pawn ending you must take into account **all** possible moves. Here, the best move can probably only be found after all the more obvious moves have been refuted.

**1.♔a1!!**

The natural move 1.♔b2 does not win the game. Black replies 1...d4 2.♕a2 (2.♕b1 d3!=; 2.♕c1 ♕c3 3.♕d1 d3 4.cxd3 ♕xd3=) 2...♕c3 3.♕b1 (3.♕a3?? ♕xc2) 3...d3 4.cxd3 ♕xb3 with a draw.

Even the somewhat more subtle move 1.♕b1 does not do the business: 1...♕c3 2.♕c1 d4 3.♕d1 (3.♕b1 d3 4.cxd3 ♕xb3=) 3...d3=.

**1...♕c3**

There is the very simple 1...d4 2.♕b2 ♕c5 3.♕c1 ♕b4 4.♕d2+-.

**2.♕b1 ♕b4**

After 2...d4 comes 3.♕c1. White has to bring about this position of mutual zugzwang when it is his opponent's turn to move. If now 3...d3, then 4.cxd3 ♕xb3 (4...♕xd3 5.♕b2+-) 5.♕d2+-.

2...♕d4 is no better, because of 3.♕b2+-.

**3.♕c1! ♕c3 4.♕d1 d4 5.♕c1**

**7.♕d2! ♕b4 8.♕e3 ♕c5 9.♕e4 ♕d6 10.♕d4+-**

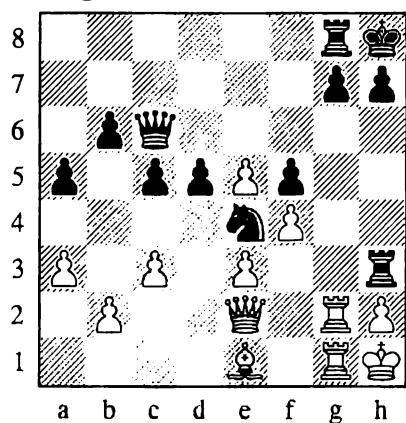

3) The variations you calculate must come to a conclusion with an evaluation. The position can only be evaluated when either you or your opponent have **no active moves** left.

F.Lee – M.Chigorin

London 1899

White has an inferior position, but sees a tactical possibility which will net him a pawn.

**1.  $\mathbb{Q}xg7 \mathbb{B}xg7$  2.  $\mathbb{R}xg7 \mathbb{Q}xg7$  3.  $\mathbb{W}g2\uparrow$**

White had ended his calculations here and probably evaluated the position as favourable to himself. But he should first have taken into account all active possibilities. After:

**3...  $\mathbb{Q}g3\uparrow!$  4.  $\mathbb{Q}xg3 \mathbb{B}h6$  5.  $\mathbb{Q}h4\uparrow \mathbb{B}g6$  6.  $\mathbb{Q}f6\uparrow \mathbb{Q}f7-$**

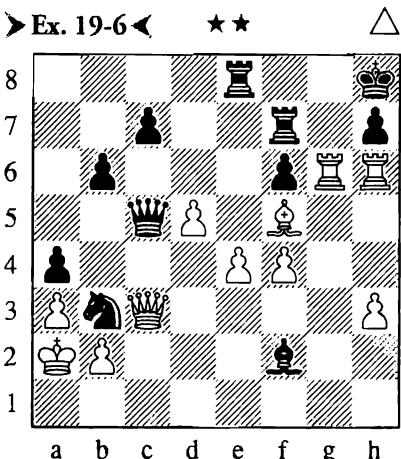

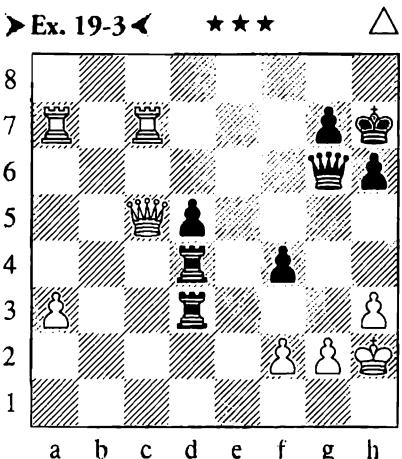

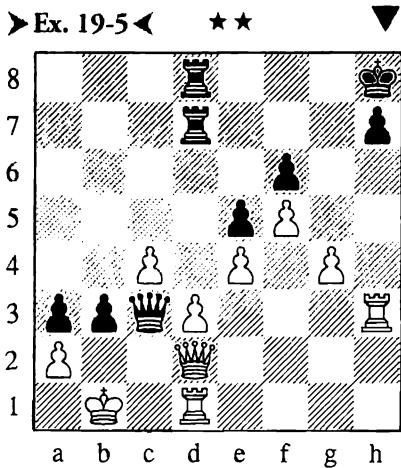

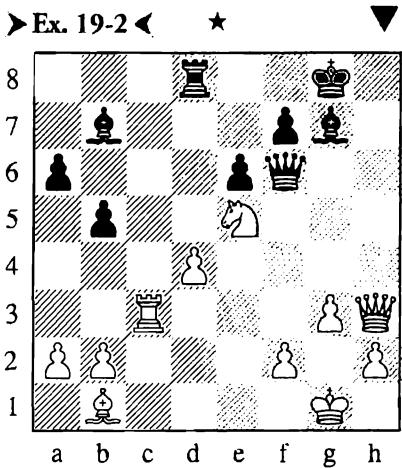

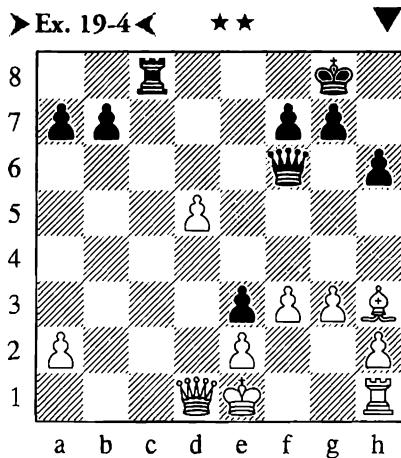

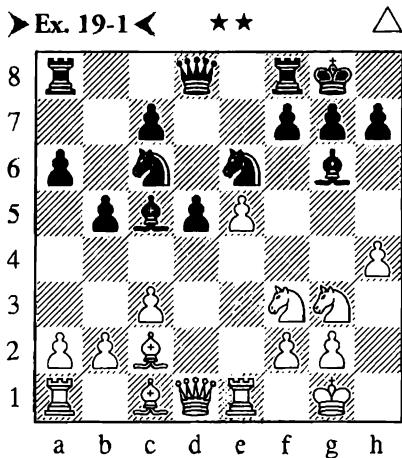

Black had a material and positional advantage.  
Next came:

**7.  $\mathbb{W}f3 \mathbb{Q}e6$  8.  $c4$   $b5$  9.  $b3$   $bxc4$  10.  $bxc4$   $\mathbb{W}b7$  11.  $h4$**

$\mathbb{W}b1\uparrow$

# Solutions

## Ex. 19-1

Z..Almasi – A.Yusupov

Ubeda 1997

1.♗b3!+–

(2 points)

Black cannot parry both threats, ♜xd5 and ♜b5, at the same time.

1.h5 ♜xc2 2.♘xc2 f6!– would not be good.

1...h6 2.h5 ♜h7 3.♗xd5+–

## Ex. 19-2

S.Freiman – I.Kan

Leningrad 1934

The correct move would be the simple:

1...♝xd4

(1 point)

After 2.♗h7† there follows 2...♝f8 3.f4 ♘d8†. While if 2.♗h7†, then 2...♝f8 3.f4 ♘d8 with a strong attack.

In the game Black played the incredible move:

1...♛xe5??

He overlooked, after 2.dxe5 ♜d1†, the simple reply 3.♗f1!. But White was not up to it either and instead he played:

2.♗h7†?? ♜f8 3.♗e3 ♜xd4+–

0–1

## Ex. 19-3

S.Tartakower – Kon

Warsaw 1927

1.♛f8!

(1 point)

This is stronger than 1.♜xg7† (1 point).

1...♝g3

1...♛g3† 2.fxg3 fxg3† 3.♗g1 ♜d1†

4.♗f1!+–

(another 1 point for this variation)

2.♜xg7†

(another 1 point)

2...♛xg7 3.♛f5† ♜g6

Or 3...♝h8 4.♜a8† ♛g8 5.♜xg8† ♜xg8  
6.♛f6†+–.

4.♜xg7† ♛xg7 5.♛e5†+–

2.♗f1 ♛d2! 3.♗g2

Or 3.♛xd2 exd2 4.♗f2 ♜c1+–.

3...♜c1! 4.♛xc1 ♛xe2†

(1 point for this variation)

It is mate next move.

0–1

## Ex. 19-5

A.Grischuk – P.Leko

Moscow (rapid) 2002

The correct move is:

41...♝xd3!

42.♜xd3 ♜xd3 43.♛xc3 ♜xd1† 44.♛c1  
♜c1†

Or 44...bx a2†+–.

45.♛xc1 bx a2+–

(another 1 point for this variation)

For 41...♛d4?! you get only 1 point. In the game Black played more weakly and had to struggle for the draw:

41...♛xd2? 42.♜xd2 b2 43.c5 ♜g8 44.d4  
♜xg4 45.♜xa3 exd4 46.c6 ♜c7 47.♜xd4

## Pawn endings 1

In this chapter you will learn some more typical procedures in pawn endings.

### Converting a material advantage

Diagram 20-1

Y.Averbakh

1974

Generally speaking, the conversion of a material advantage is rather easy in a pawn ending.

1.  $\mathbb{Q}f1$

1) Before creating a passed pawn, it is usually good first of all to improve the position of your king.

1...  $\mathbb{Q}e7$  2.  $\mathbb{Q}e2$   $\mathbb{Q}d6$  3.  $b4$

Another possibility is 3.  $\mathbb{Q}d3$   $\mathbb{Q}c5$  4.  $\mathbb{Q}c3$ , intending  $b4$ .

3...  $\mathbb{Q}d5$  4.  $\mathbb{Q}d3$   $f5$  5.  $f4$   $g6$  6.  $g3$   $a6$  7.  $a4$

The black king cannot maintain its active position and must give ground.

7...  $\mathbb{Q}c6$  8.  $\mathbb{Q}d4$   $\mathbb{Q}d6$  9.  $b5$

2) It is necessary to create a passed pawn and then threaten to queen it.

9...  $a \times b5$  10.  $a \times b5$   $\mathbb{Q}c7$  11.  $\mathbb{Q}e5$

3) Should the opposing king manage to hold up the pawn, the stronger side will make use of the fact that it has been deflected in this way in order to break through to the opposing pawns and achieve a decisive material advantage.

White also has another winning plan in this position – he can play for zugzwang: 11.  $\mathbb{Q}c5$   $\mathbb{Q}b7$  12.  $b6$   $\mathbb{Q}b8$  13.  $\mathbb{Q}c6$   $\mathbb{Q}c8$  14.  $b7 \dagger$   $\mathbb{Q}b8$  15.  $\mathbb{Q}b6 \ominus$  The black king is stalemated and Black must move his pawns. 15...  $h6$  (or 15...  $h5$  16.  $\mathbb{Q}c6$   $h4$  17.  $gxh4 \dagger \dagger$ ) 16.  $h4$   $g5$  17.  $hxg5$   $hxg5$  18.  $fxg5$   $f4$  19.  $g6$   $fxg3$  20.  $g7$   $g2$  21.  $g8 \# \#$ .

11...  $\mathbb{Q}b6$  12.  $\mathbb{Q}f6$   $\mathbb{Q}x b5$  13.  $\mathbb{Q}g7$   $\mathbb{Q}c4$  14.  $\mathbb{Q}xh7$   $\mathbb{Q}d4$  15.  $\mathbb{Q}xg6 \dagger \dagger$

(Y.Averbakh: *Comprehensive chess endings*)

### The struggle between the kings

In pawn endings the kings are the principal actors and they are fighting against each other. Of course they cannot attack each other directly, but they can protect important squares which help them impede the opposing king.

**The special geometry of the chessboard** often plays an important role in this.

### The geometry of the chessboard

**Diagram 20-2**

I. Maizelis

1921

The *key squares* for the white king, after it wins the a7-pawn, are b7 and b8.

1.  $\mathbb{Q}e6!$

Distances on the chessboard are equal, whether the king goes to another square in a straight line or whether it follows a zigzag course. Both kings need exactly five moves to reach their goal: White to get to the a7-pawn, Black to get to the saving square c7. But the white king can hinder the approach of the black king.

1.  $\mathbb{Q}e7?$  would be wrong, in view of 1...  $\mathbb{Q}c3$  2.  $\mathbb{Q}d7$   $\mathbb{Q}d4$  3.  $\mathbb{Q}c6$   $\mathbb{Q}e5$  4.  $\mathbb{Q}b7$   $\mathbb{Q}d6$  5.  $\mathbb{Q}xa7$   $\mathbb{Q}c7=$ .

1...  $\mathbb{Q}c3$  2.  $\mathbb{Q}d5!$

The white king employs a *bodycheck* against its black opponent – or shoulders it off.

2...  $\mathbb{Q}b4$

2...  $\mathbb{Q}d3$  also loses a tempo.

3.  $\mathbb{Q}c6$   $\mathbb{Q}a5$  4.  $\mathbb{Q}b7$   $\mathbb{Q}b5$  5.  $\mathbb{Q}xa7$   $\mathbb{Q}c6$  6.  $\mathbb{Q}b8+ -$

### The bodycheck

**Diagram 20-3**

J. Dobias

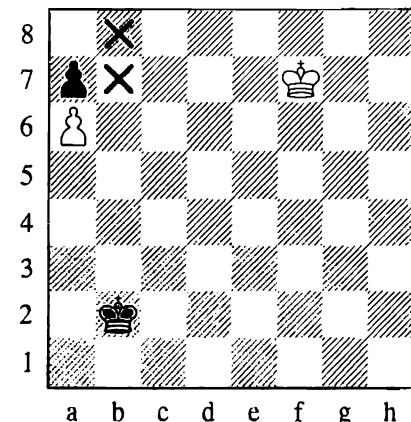

1926

If the white king immediately heads towards the g6-pawn, its counterpart can attack the f2-pawn. White first employs the bodycheck, to improve his position.

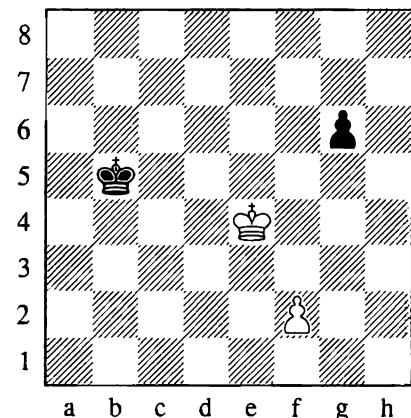

1.  $\mathbb{Q}d4!!$

Nothing is achieved by 1.  $f4?$   $\mathbb{Q}c4$  2.  $\mathbb{Q}e5$   $\mathbb{Q}d3$  3.  $\mathbb{Q}f6$   $\mathbb{Q}e4=$ .

### The king's various routes

The special geometry of the chessboard allows the king a greater choice of routes. Here are the most important ideas which go along with the bodycheck.

### The zigzag

### 1.♔h3!

3.♗g3!=

**Diagram 20-6**

### The activity of the king

The activity of the king is an important and often decisive advantage. So study with great care the following example.

**Diagram 20-7**

1.♔e8!

If 1.♔e7, then 1...♗g8.

1...♗f6

Or 1...♗g8 2.♔e7 ♗g7 3.f5. White wins with this move if the kings are in opposition. 3...g5 4.♔e8 ♗f6 (4...♗g8 5.f6+-) 5.♔f8○.

5...♗f6 6.♔f8○+-

**Diagram 20-7**

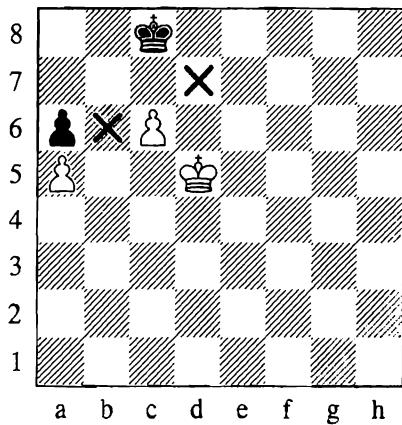

**Zugzwang and corresponding squares**

*Zugzwang* and *corresponding squares* are important elements in pawn endings.

*Corresponding squares* are squares on which both sides find themselves in zugzwang.

*The opposition* is only a special case of corresponding squares. There are, of course, other cases such as *mined squares* or *triangulation*.

**Diagram 20-8****Diagram 20-8****H.Fahrni – S.Alapin**

The key squares are b6 and d7. The corresponding squares are:

- 1) c5-c7
- 2) d5-c8
- 3) d6-d8, and also c4-d8(b8) and d4-d8(b8).

The last two pairs are also easy to understand. They are the squares which are next to the two related pairs 1 and 2.

White wins by a triangular manoeuvre with his king.

**1. ♔c4!**

Equally good is 1. ♔d4! ♔d8 2. ♔c4! ♔c8 3. ♔d5!.

**1... ♔b8**

1... ♔d8 is met similarly. If 1... ♔c7, then 2. ♔c5+–.

**2. ♔d4!**

The triangulation.

**2... ♔c8**

Black loses, because he is unable to remain next to both c7 and c8. The other suitable square (d8) cannot be reached directly from b8 and so is of no help to him! Thus White has a waiting move, while Black does not! Black is therefore forced to occupy one of the squares c7 or c8.

**3. ♔d5!**

White simply occupies the corresponding square.

**3... ♔c7**

If 3... ♔b8(or d8), then 4. ♔d6 ♔c8 5. c7⊕+–.

**4. ♔c5! ♔c8 5. ♔b6+–**

**Diagram 20-9**

G.Walker

1841

**1.♔a3!**

1.a3? would be bad, in view of 1...♝b6 2.♝c3 ♜a5=. If now 3.♝d3?!, then 3...♝a4 4.♝e4 ♜xa3 and White has to find 5.♝d3! ♜b3 6.♝d2 ♜xc4 7.♝c2= with the opposition. Instead 5.♝d5? loses to 5...♝b4○. The squares b4 and d5 are *mined*: neither player must be the first to occupy one of them!

5.♝e5? is also bad, due to 5...♝b3 6.♝d5 ♜b4○.

**1...♝b6 2.♝b2! ♜a5**

Or 2...♝a6 3.♝c2 ♜a5 4.♝d2!.

**3.♝b3!**

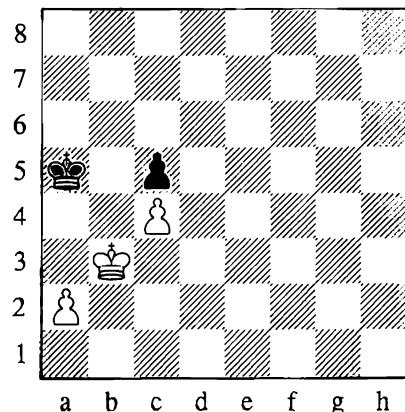

The triangulation manoeuvre wins an important tempo.

**3...♝b6 4.♝c3 ♜a5**

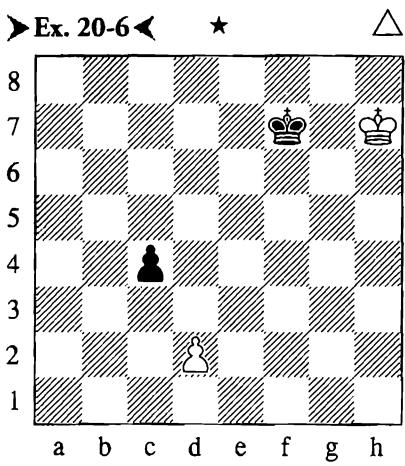

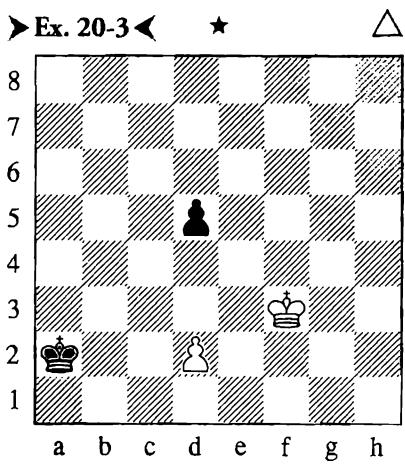

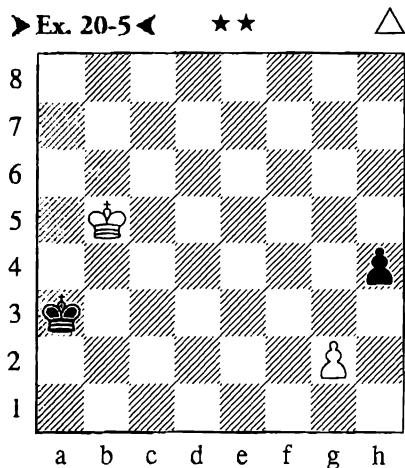

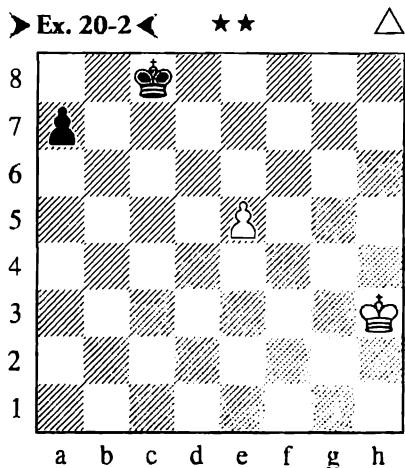

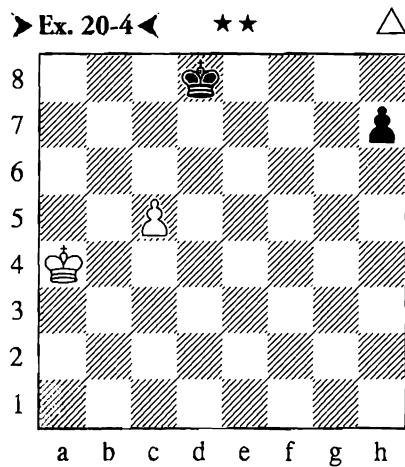

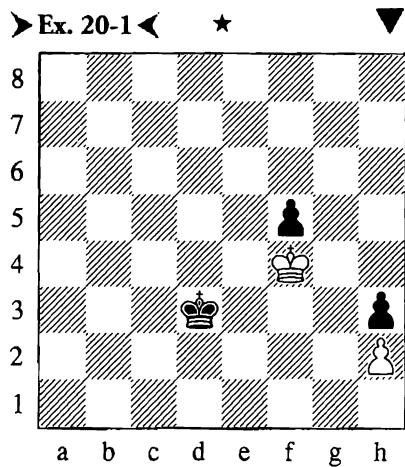

The corresponding (mined) squares are b4 and d3.

**5.♝d2! ♜a4 6.♝e3!**

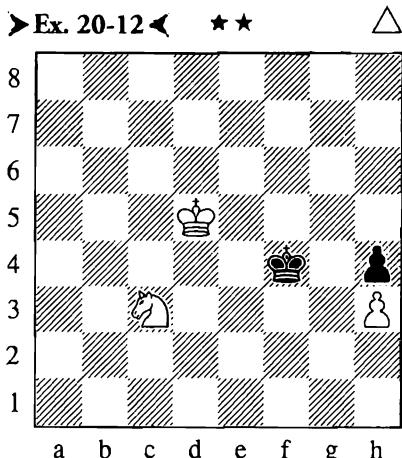

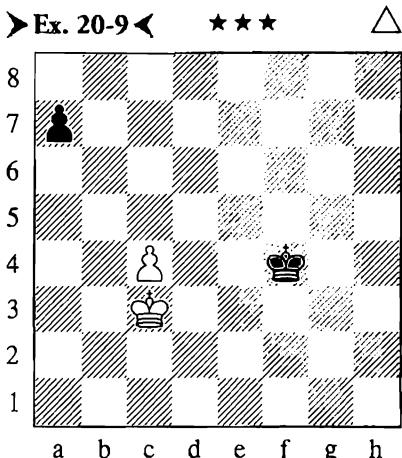

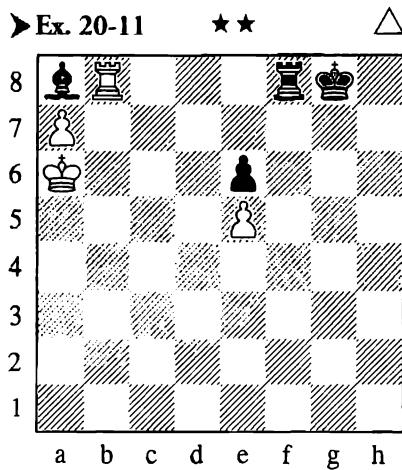

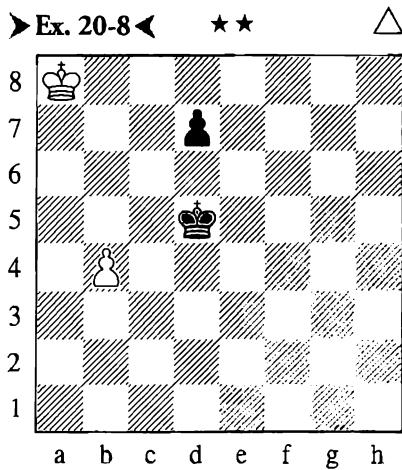

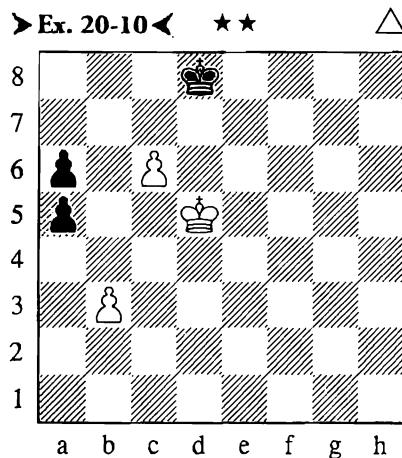

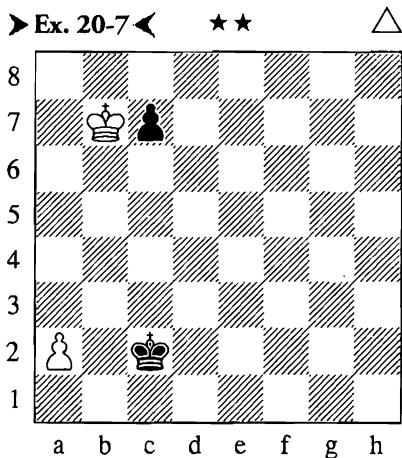

But not 6.♝d3? on account of 6...♝b4○.

## Decoying

The motif of *decoying* is an important tactical procedure in chess. **The king, or sometimes another piece, may be decoyed to an unfavourable position.**

Decoying is often a component part in various combinations (including, of course, mating combinations) which also contain other tactical motifs such as, for example, a *double attack* or a *double check*.

**Diagram 21-1**

**Diagram 21-1**

**Ilijuschtshenko – Schuschina**

USSR 1971

White is threatening mate. But with the help of a decoy, Black decides the game in his favour.

**1...Bg1†!!**

Either the king or the rook is decoyed to an unfavourable position.

**2.Qxg1**

Or 2.Bxg1 Qf2#.

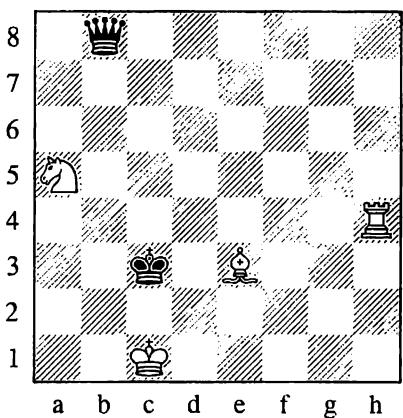

**2...Bxg2†**

2...Bbxg2† also leads to mate: 3.Qh1 Bg1†

4.Qxg1 Qf2#.

**3.Qh1 Bxh2† 4.Qg1 Bbg2#**

**Diagram 21-2**

**2.Bb3†! Qxb3 3.Qd2†+-**

**Diagram 21-3****Miszto – Kloza**

**1.♕g7†!!**

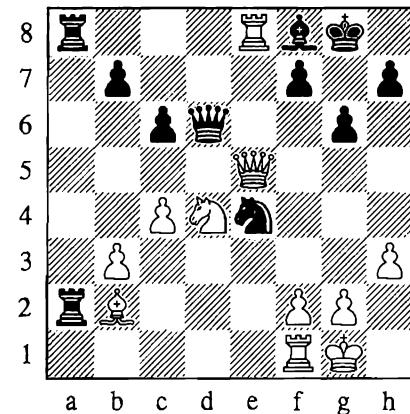

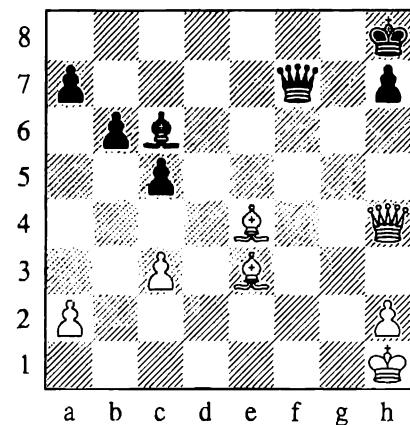

This sacrifice decoys the black king onto the fatal g7-square.

**1...♗xg7 2.♘f5† ♗g8 3.♘h6#**

The next nicely constructed mate is just as important for our tactical arsenal.

**Diagram 21-4****N.N. – H.Pillsbury**

1899

**1...♗f1† 2.♗g1 ♗f3†! 3.♗xf3 ♗xf3#****Diagram 21-3****Diagram 21-4**

In the next game, Black overlooked a possible combination involving decoying.

**Diagram 21-5****M.Dvoretsky – L.Albert**

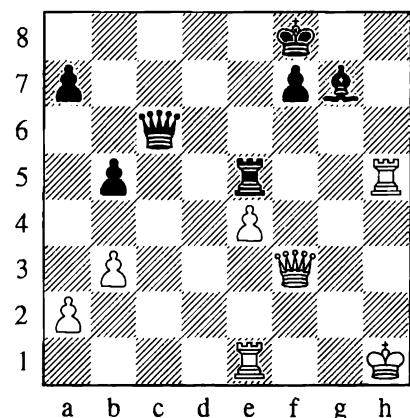

Kiev 1970

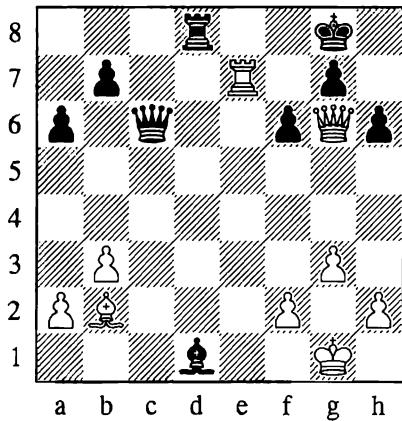

After 1...♗c2?? 2.♗xe5+– White had a decisive advantage in material and won the game.

Instead, Black could have decided the game in his favour. He would have won after:

**1...♗c3!!–**

If 2.♗xc3, then 2...♗xh5†–+. After 2.♗e2 comes 2...♗xh5† 3.♗xh5 ♗xe1†–+. And 2.♗e3 is no better, due to 2...♗xh5† 3.♗xh5 ♗xe3–+.

**Diagram 21-5**

**Diagram 21-6**

Often a decoy is needed to expose the opposing king to checks and so speed up the attack.

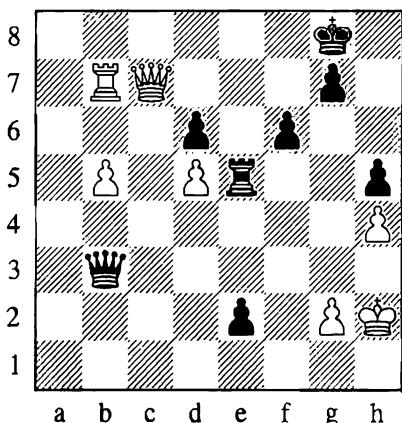

**Diagram 21-6**

1... $\mathbb{W}h1\#$ ! 2. $\mathbb{Q}xh1$   $\mathbb{Q}f3\#$  –+

White has some dangerous threats of mate. So Black cannot afford to waste any time.

1... $\mathbb{W}g3\#$ !

White resigned at once, because after 2. $\mathbb{Q}xg3$  there follows 2... $e1\mathbb{W}\#$ . Now White is mated in all variations:

- a) 3. $\mathbb{Q}h2$   $\mathbb{W}xh4\#$  4. $\mathbb{Q}g1$   $\mathbb{E}e1\#$
- b) 3. $\mathbb{Q}f3$  (or  $\mathbb{Q}f4$ ) 3... $\mathbb{W}e3\#$

Decoying is also used to rip the opposing king out of a safe environment.

**1...g4†!–**

A double decoy decides the game. White resigned.  
After 2.♕xg4 comes the second decoy 2...h5†!–.  
If now 3.♕xh5, then 3...♕g5#.

In the following example you will find decoying combined with a discovered attack.

**Diagram 21-10****B.Katalymov – G.Ilivitzki**

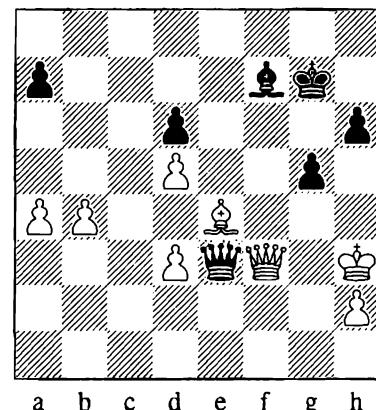

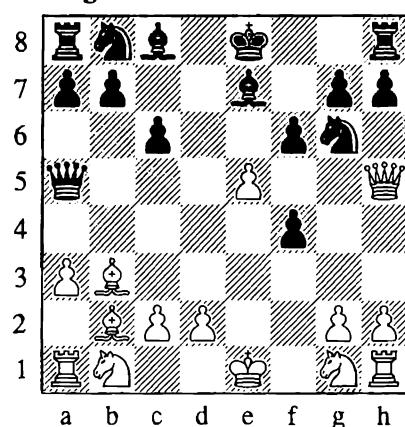

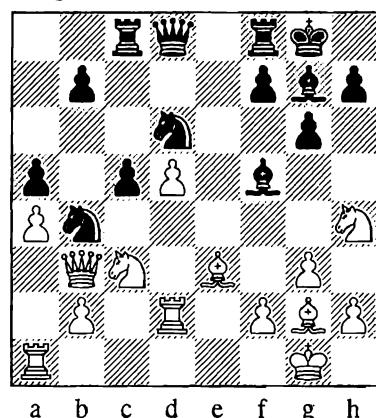

**Diagram 21-11****D.Lapienis – A.Koblenz**

**1...♗c2!**

After this effective move White resigned.

# CHAPTER 22

## Contents

- ✓ Typical mistakes in the opening
- ✓ An advantage in development
- ✓ Symmetry in the opening

## Time in the opening

We already know that the first principle in opening play is rapid development of all the pieces. In this chapter we treat this theme in even greater depth.

**In the opening – especially in open positions – you should waste no time.**

You should also understand that rules in chess are never universally correct, there are also sometimes exceptions. But before concerning yourself with exceptions to the rule, you need first to have properly understood the rule itself!

### Typical mistakes

Here are some typical mistakes which may lead to a loss of time:

- 1) Moving the rook pawns to h3 or a3 (h6 or a6) without good reason.
- 2) Moving pieces which have already been developed and forgetting to bring the remainder of your forces into play.
- 3) Developing the queen too early into an exposed position.
- 4) Trying to win material too soon and in doing so neglecting your development.

An experienced opponent will punish such errors mercilessly.

A. Tolush – V. Alatortsev

USSR Ch, Moscow 1948

**1.e4 e5 2.f4 d5 3.exd5 ♖xd5?**

3...exf4 would be better. Now White can attack the queen, thereby gaining time for his development.

**4.♘c3 ♖e6**

**Diagram 22-1**

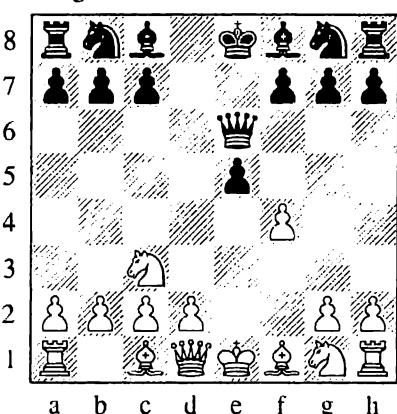

**5.fxe5**

The pawn sacrifice 5.♘f3?! exf4† 6.♖e2 would also be very promising. White develops his pieces very quickly and can attack the opposing king which is still in the centre.

**5...♖xe5† 6.♖e2**

The threat is 7.♘f3, gaining another tempo.

Diagram 22-1

**6...Bg4!?**

This hinders the development of the g1-knight.

**7.d4!**

Another 'free' developing move! Black must move the queen again.

If 7.Qf3?, then 7...Qxf3.

**7...We6 8.Wd3**

White prepares to castle queenside. There is at the same time the threat of 9.Qb5†.

**8...c6 9.Qf4 Qf6 10.0-0-0****Diagram 22-2**

White is clearly better. He has already mobilized several pieces and castled. Black is afraid that his opponent will use the e-file for a quick attack. But the exchange on e2 just speeds up White's development.

**10...Qxe2 11.Qgxe2 Qd6?****Diagram 22-3**

In difficult positions you cannot afford to play the second-best move. Here the correct move would be 11...Qbd7, to prepare queenside castling.

If 12.Qhe1 0-0-0 13.Qg3 (13.h3 Qd6), then 13...Wg4 14.Qf5 g6±. Even after 12.d5 Qxd5 13.Qxd5 Wxd5 14.Qxd5 cxd5 15.Qc3 0-0-0 16.Qxd5 White is only moderately better.

**12.d5!**

To exploit a lead in development you should try to open lines.

**12...Qxd5!?**

12...cxd5 would be more stubborn, but even then White has a dangerous initiative: 13.Qb5! Qe5 14.Qbd4 Qxd4 (or 14...Wd6 15.Qe3 Qe4 16.Qb5±) 15.Qxd4 Wg4 16.Qhe1† Qf8 17.Qd6† Qg8 18.Qb3 Qc8 19.Qe5± and if 19...Qbd7?!, then 20.Qf5+–.

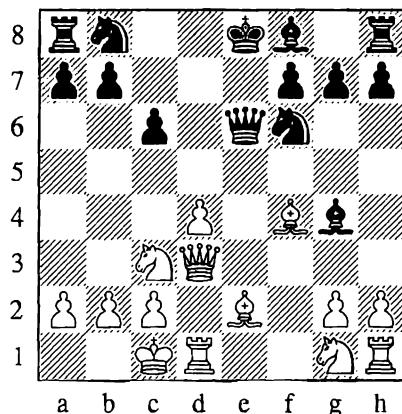

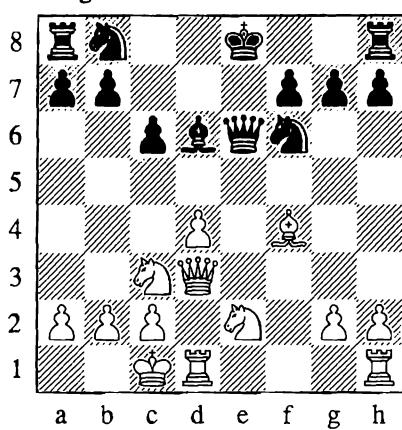

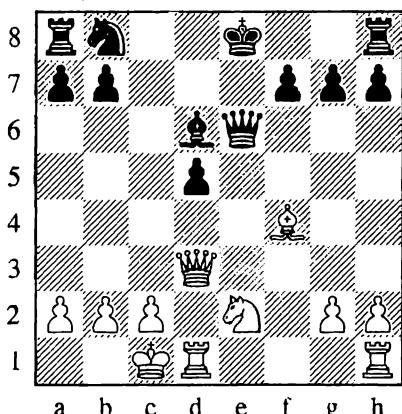

12...Wd7? would be bad, in view of 13.Qxd6 Wxd6 14.dxc6! Wxd3 15.cxb7!+–.

**13.Qxd5! cxd5****Diagram 22-4****14.Wg3!+–**

White does not allow his opponent any time to consolidate the position and exploits his better developed pieces to attack him!

**14...Qxf4†**

If 14...Qc6, then 15.Qxd6 0-0-0 16.Qc7 Wd7 17.Qxg7 Be8 18.Qg3+– and the knight on e2 is dead because of 19.Qhe1.

**Diagram 22-2****Diagram 22-3****Diagram 22-4**

**15.  $\mathbb{Q}xf4 \mathbb{Q}h6$**

Yet again Black is forced to move his queen away. In this example we can see what serious consequences can result from a mistake in the opening. The white attack is like an avalanche.

**16.  $\mathbb{E}he1\# \mathbb{Q}f8$  17.  $\mathbb{W}a3\#$**

1–0

The following example is taken from the classic book *Chess master vs. chess amateur* by the fifth World Chess Champion Max Euwe.

**Amateur – Master**

**1.e4 e5 2.  $\mathbb{Q}f3 \mathbb{Q}c6$  3.  $\mathbb{Q}c3 \mathbb{Q}f6$  4.  $\mathbb{Q}b5$**

4.d4 is a good alternative.

**4...  $\mathbb{Q}b4$**

4...  $\mathbb{Q}d4$  leads to sharp play.

**5.0–0 0–0 6.d3 d6 7.  $\mathbb{Q}g5$**

**Diagram 22-5**

**7...  $\mathbb{Q}e7??$**

In such positions Black must choose the correct moment to break the symmetry. Black accepts the doubled f-pawns, hoping to get counterplay on the kingside via the g-file.

7...  $\mathbb{Q}g4?$  8.  $\mathbb{Q}d5 \mathbb{Q}d4$  9.  $\mathbb{Q}xb4 \mathbb{Q}xb5$  10.  $\mathbb{Q}d5 \mathbb{Q}d4$  would be bad, on account of 11.  $\mathbb{W}d2!!$   $\mathbb{Q}xf3\#$  (or 11...  $\mathbb{Q}xf3$  12.  $\mathbb{Q}xf6 \mathbb{W}d7$  13.  $\mathbb{Q}e7\#$   $\mathbb{Q}h8$  14.  $\mathbb{Q}xg7\#$   $\mathbb{Q}xg7$  15.  $\mathbb{W}g5\#$   $\mathbb{Q}h8$  16.  $\mathbb{W}f6\#$ ) 12.  $gx f3 \mathbb{Q}xf3$  13.  $\mathbb{Q}xf6$   $gxf6$  14.  $\mathbb{W}e3 \mathbb{Q}h5$  15.  $\mathbb{W}h6 \mathbb{Q}g6$  16.  $f4 c6$  17.  $fxe5 fxe5$  18.  $\mathbb{Q}f6\#$   $\mathbb{Q}h8$  19.  $h4+-$ .

There is the solid continuation 7...  $\mathbb{Q}xc3$  8.  $bxc3$   $\mathbb{W}e7$ , intending  $\mathbb{Q}d8-e6$ .

7...  $\mathbb{Q}xc3$  8.  $bxc3$   $h6$  9.  $\mathbb{Q}h4 \mathbb{Q}d7$  is also a safe possibility.

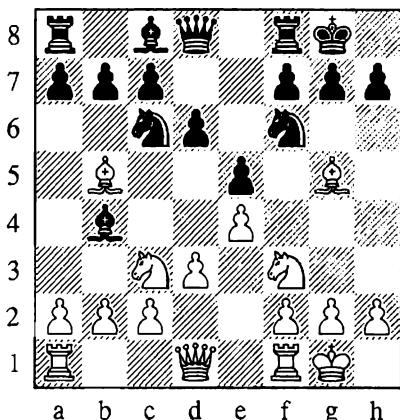

**8.a3?**

This is a clear loss of time, since Black would probably give up his bishop for the c3-knight of his own accord, in order to stop the latter getting to d5.

8.  $\mathbb{Q}xf6$   $gxf6$  9.  $\mathbb{Q}e2$  would be a better way to play. If instead 9.  $\mathbb{Q}h4 \mathbb{Q}g6$  10.  $\mathbb{W}h5 \mathbb{Q}xc3$  11.  $bxc3$   $\mathbb{Q}h8$  12.  $\mathbb{Q}f5$  (Euwe), then 12...  $\mathbb{Q}f4$  and Black is already somewhat better.

Also clearly superior is 8.  $\mathbb{Q}h4 \mathbb{Q}xc3$  9.  $bxc3$ . Black may now play 9...  $\mathbb{Q}d7$ , intending to free himself

Diagram 22-5

from the pin by f7-f6. After 10.d4 f6 11.Qe3 Qb6 Black has a solid position.

### 8...Qxc3 9.bxc3 Qg6

'This is how Black avoids the doubling of his pawns and prepares the unpinning of his king's knight.' (Euwe)

### 10.We2?

If the black knight later comes to f4 this move will once again be shown up as a waste of time. 10.Wd2 would be better.

### 10...h6

A typical unpinning manoeuvre.

### 11.Qe3

11.Qxf6? Wxf6 concedes the initiative on the kingside to Black.

**Diagram 22-6**

### 11...Qh5!

Intending to occupy the f4-square.

### 12.d4

12.Qxe5? would be bad, because of 12...Qhf4 13.Qxf4 Qxf4 and then 14...dxe5.

### 12...Qhf4 13.Qxf4?

13.Wd2 Qg4 14.Qc1 would be more logical, and White would have no great problems. Exchanging the knight only helps his opponent, who wants to get rid of a 'superfluous' knight (both pieces are aiming for the f4-square).

### 13...Qxf4† 14.Wd2?

White should play 14.We3 to protect his f3-knight. After 14...Wf6† Black is more active.

### 14...Wf6† 15.Qh1?

If 15.Qe1?, then 15...exd4! 16.cxd4 Wg5! with the double threat of Qh3† and Wxb5.

15.We3, admitting the loss of a tempo, was required.

**Diagram 22-7**

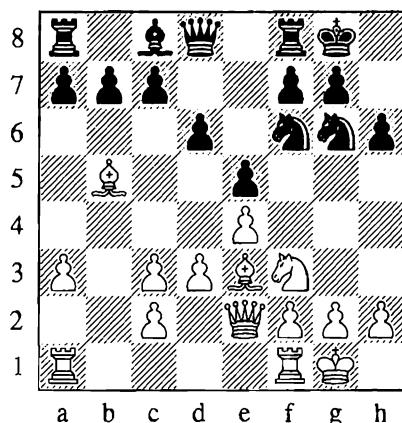

### 15...Qxg2!

A typical combination, which destroys the white castled position. 15...Wg6 16.Qg1 Wxe4 17.Qae1 Wf5 18.dxe5 Qxg2 would not be so good, due to 19.Qxg2 Wxf3 20.Qe3 with counterplay.

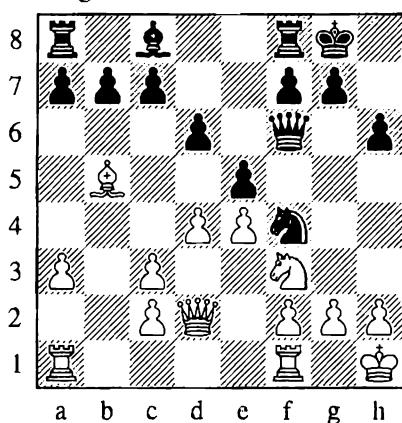

### 16.Qxg2

16.Qe2 Qf4 would be somewhat more stubborn, although Black has an extra pawn and a better position.

**Diagram 22-6**

**Diagram 22-7**

**16...♝h3†! → 17.♝g3**

After 17.♗xh3 comes 17...♛xf3† 18.♝h4 g5†→.

**17...♜xf1**

Even simpler would be 17...♛e6! threatening ♛g4#.

**18.♜xf1 ♛g6† 19.♝h3**

Or 19.♝h4 ♛xe4† 20.♝g3 ♛g6† 21.♝h4 ♛g2 22.♛e3 g5† 23.♝xg5 hxg5† 24.♛xg5† ♛xg5† 25.♝xg5 ♛g7 with a winning endgame.

**19...♝f!**

This move with its threat of ♛g4# also brings more black pieces (the rook on f8 and the pawn on f5) into the attack.

**20.♜g1**

20.exf5 ♛xf5† 21.♝g2 ♛xf3†→ is clear.

**20...♛h5† 21.♝g2**

After 21.♝h4 comes 21...g5 and Black wins the knight.

**21...♛g4† 22.♝f1 ♛xf3 23.♛xh6**

White tries his last chance.

**Diagram 22-8**

**23...♛d1†!**

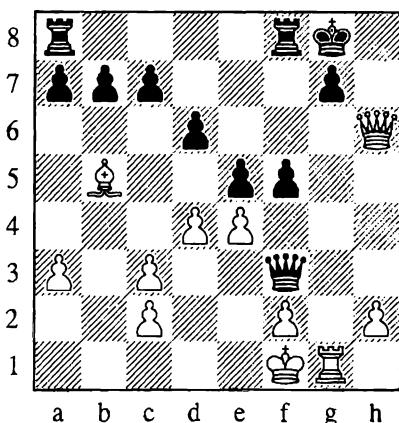

Certainly not 23...♝f7?, due to 24.♝xg7†! ♜xg7 25.♝c4† ♜f7 26.♛g6† ♜h8 27.♛h6† ♜h7 28.♛f6† ♜g7 29.♛h6† with perpetual check.

**24.♝g2 ♛xg1†**

And White resigned.

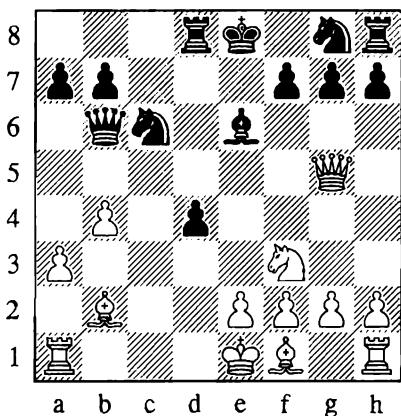

In the next test, please try to exploit the opening mistakes made by your opponent. Look for active attacking moves. Try at the same time to bring your pieces into play with a gain of tempo.

1... $\mathbb{Q}f6!$

(2 points)

1... $\mathbb{Q}xb4$  2.axb4  $\mathbb{W}xb4\#$  would be bad, due to 3. $\mathbb{Q}d2$ .

You only get 1 point for the move 1... $\mathbb{Q}f8$ , two points for the somewhat more active move 1... $\mathbb{Q}ge7$ . The knight is clearly better placed on f6.

2. $\mathbb{W}xg7 \mathbb{Q}e7$

## Improving the position of your pieces

Improving the position of your pieces is one of the most important positional operations. You already know that you must, if possible, get **all your forces into play**. You must try to place your pieces in their optimal and most active positions. As you do so, it is very important to ensure that the pieces developed **coordinate with each other** for future operations.

The pieces must form a whole which can act in common and can mutually support each other. That is what will give you better chances for a successful attack.

Diagram 23-1

E.Najer – S.Yuferov

St Petersburg 2000

1.  $\mathbb{E}b3!$

White improves the position of the rook, gaining a tempo at the same time, and forces the black bishop to leave the important long diagonal.

1...  $\mathbb{B}b4$

1...  $\mathbb{E}g7?$  loses to 2.  $\mathbb{E}a3+-$ .

2.  $\mathbb{Q}e5!$

Activating the knight, which will find a good position on c6.

2...  $\mathbb{E}ac8$  3.  $\mathbb{E}h3!$

A typical idea: the rook is brought into the attack via the 3rd rank.

3...  $c4$  4.  $\mathbb{W}e3!+$

In four moves White has won the game! Black can hardly beat off the mating attack threatened with  $\mathbb{W}h6$ . Note how skilfully White coordinated his pieces (rook, knight, queen and c1-bishop) for a direct attack on the kingside. The ability to find an optimal position for his pieces is the main weapon of the positional player.

**Diagram 23-2**

**Y.Seirawan – A.Yusupov**

Istanbul Olympiad 2000

**1...♞f8!**

Black will bring his ‘redundant’ knight onto the ideal square c4 (via d7 and b6). There the knight will be very safe and active. If White exchanges it, Black will obtain a protected passed pawn. This will blunt any possible white counterplay against the pawn on c6.

**2.♝b3 ♜a3 3.♝c1**

After 3.♝c5 Black ‘puts a filling’ in the weakness on c5 with the exchange 3...♝xc5†.

**3...♝d7 4.♝c2 ♜a8!**

**Diagram 23-3**

Black regroups his pieces to make possible his main idea – the penetration of the knight to c4.

**5.♞e1!**

White too manoeuvres very skilfully: he brings his knight to d3, from where it can, as appropriate, either protect the a2-pawn or support the other knight as it penetrates to c5.

**5...♝b6 6.♞d3 ♜c4**

Black is better. He is able to play on the queenside against the a2-pawn, or attack in the centre down the e-file and on the kingside.

**7.♝e2 ♜c8!?**

Black brings his queen to the kingside, to exploit the weakness of the light squares.

**8.♛bc5**

Intending to play e4.

**8...♝ce7**

Making e3-e4 more difficult.

**9.♝fe1!**

Again preparing e4. White could also consider 9.a4!??.

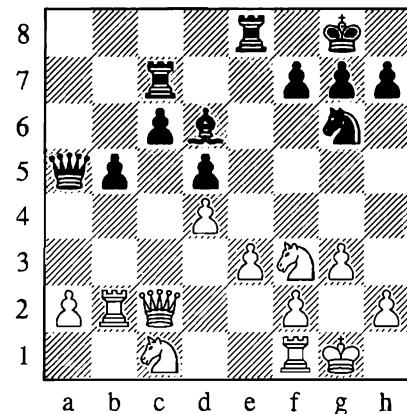

**9...♛f5**

After 9...♛h3?! there comes 10.e4†.

**10.♚g2 h5!†**

Black has good attacking chances.

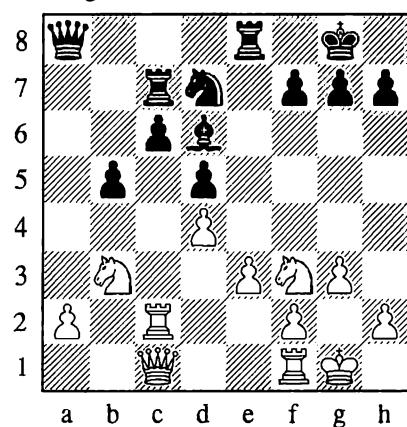

Diagram 23-4

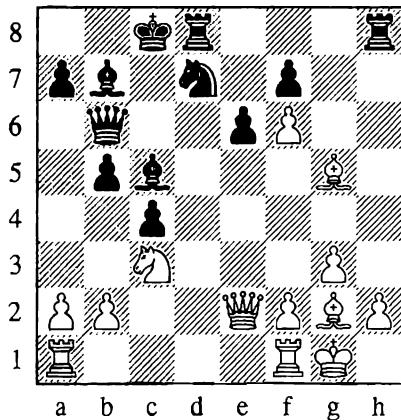

Diagram 23-4

A.Lilienthal – A.Kotov

Moscow 1948

1... $\mathbb{Q}d4!?$

Black is preparing  $\mathbb{Q}c5-d3$ .

2. $\mathbb{B}ad1$

2.a4!?

2... $\mathbb{Q}c5$  3. $\mathbb{Q}xb7\#$   $\mathbb{W}xb7$  4. $\mathbb{B}xd4!$   $\mathbb{B}xd4$  5. $\mathbb{W}e5?$

The correct continuation would be 5. $\mathbb{A}e3!$   $\mathbb{E}e4$

6. $\mathbb{Q}xe4$   $\mathbb{W}xe4$  7.b3!∞.

5... $\mathbb{B}d5$  6. $\mathbb{Q}xd5$   $\mathbb{W}xd5$  7. $\mathbb{A}e1$

Better is 7. $\mathbb{W}e3$ .

7... $\mathbb{W}c6$  8. $\mathbb{W}e3$   $\mathbb{Q}d3$

This is the optimal position for the knight.

9. $\mathbb{B}b1$   $\mathbb{B}d8$  10.h4

10.f3!∞

10... $\mathbb{Q}xb2!$  11. $\mathbb{W}xa7$

Of course not 11. $\mathbb{B}xb2??$   $\mathbb{B}d1\#$ –+.

11... $\mathbb{Q}d3$  12. $\mathbb{B}d1$ ?

A decisive mistake. He had to play 12. $\mathbb{W}e3\#$ .

12... $\mathbb{B}d7!$

And suddenly White loses, because of the threat of  $\mathbb{Q}f4!$ , e.g. 13. $\mathbb{W}a3$  b4! 14. $\mathbb{W}a5$   $\mathbb{Q}f4$ –+. Note the optimal coordination between the black pieces!

Diagram 23-5

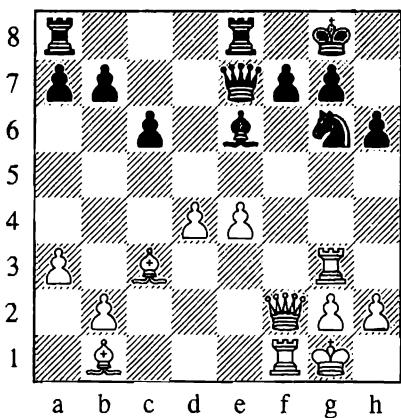

Diagram 23-5

1.d5!

A tactical operation aimed at activating the bishops.

1... $\mathbb{Q}d7$

1...cxd5 loses to 2. $\mathbb{W}d4!$   $\mathbb{W}f8$  3. $\mathbb{B}xg6$ –+.

2. $\mathbb{B}a2!$

The second bishop also joins the attack. White has another, even prettier solution: 2. $\mathbb{B}xg6!$  fxg6 3.d6  $\mathbb{W}e6$  (or 3... $\mathbb{W}f8$  4. $\mathbb{W}d4$ –+) 4. $\mathbb{B}a2!$   $\mathbb{W}xa2$  5. $\mathbb{W}d4$ !–.

2...cxd5 3.exd5

The threat is  $\mathbb{B}xg6$  followed by d6†.

3... $\mathbb{Q}e5$  4. $\mathbb{B}e3$   $\mathbb{W}f6$

Black has no defence. After 4...f6 there would follow 5.d6†.

5.  $\mathbb{E}xe5$   $\mathbb{E}xe5$  6.  $\mathbb{Q}xe5$   $\mathbb{W}xe5$  7.  $\mathbb{W}xf7+$   $\mathbb{Q}h8$

8.  $\mathbb{W}xd7$

1-0

The improvement of the position of your own pieces is often accompanied by the **pushing back of the opposing pieces**. That is most often brought about by an attack with the pawns.

**Diagram 23-6**

**S.Furman – A.Lilienthal**

USSR Ch, Moscow 1949

1.  $h4!$

White wants to drive the knight away from its good defensive position on g6.

1...  $f6$  2.  $\mathbb{W}g3?$

After 2.  $h5$  there comes 2...  $\mathbb{Q}ge7$  3.  $\mathbb{Q}d6$   $\mathbb{E}xd6$  4.  $\mathbb{exd6}$   $\mathbb{W}xd6$  and Black can still mount a defence.

2...  $fxe5$

On 2...  $\mathbb{E}c3$  comes 3.  $\mathbb{W}g4$  with a dangerous attack.

3.  $dxe5$   $\mathbb{Q}de7$

3...  $\mathbb{E}c3$  would be bad, in view of 4.  $\mathbb{W}g4$   $\mathbb{Q}xe5$  5.  $\mathbb{Q}h6!$   $\mathbb{E}xh6$  6.  $\mathbb{W}xd7$   $\mathbb{Q}xd7$  7.  $\mathbb{E}e8+$ .

4.  $\mathbb{Q}d6$   $\mathbb{E}xc1$

After 4...  $\mathbb{E}f8$  5.  $\mathbb{E}xf8+$   $\mathbb{Q}xf8$  6.  $\mathbb{E}f1$  White gets a clear advantage.

5.  $\mathbb{E}xc1$   $\mathbb{Q}xe5$  6.  $\mathbb{W}f2!$

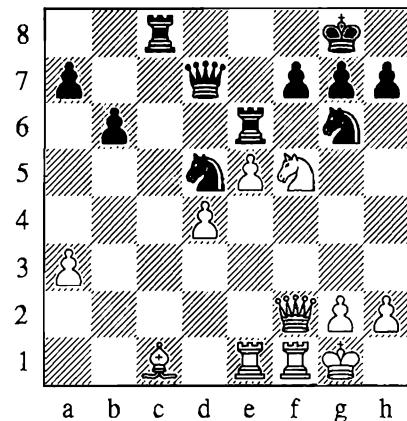

The position is too open. It is easy for a rook to display its superiority to the knight.

6.  $\mathbb{W}b3!$  would also be very strong. After 6...  $\mathbb{W}xd6$  there follows 7.  $\mathbb{E}cd1$   $\mathbb{W}c5+$  8.  $\mathbb{Q}h1+$ .

6...  $h6$  7.  $\mathbb{W}f8+$   $\mathbb{Q}h7$  8.  $\mathbb{Q}f5$   $\mathbb{Q}xf5$  9.  $\mathbb{W}xf5+$   $g6$  10.  $\mathbb{W}f8$   $\mathbb{E}e8$  11.  $\mathbb{W}f4$   $h5$  12.  $\mathbb{E}c3!$   $\mathbb{E}e7$  13.  $\mathbb{E}e3+$

5...h5!

Black also wants to activate his dark-squared bishop.

**6.Qa1 ♜h7 7.Qb4 ♜h6 8.Qb1 ♜e3**

Black wins a pawn. Also good would be 8...Qd2 9.Qe1 Qxf3+.

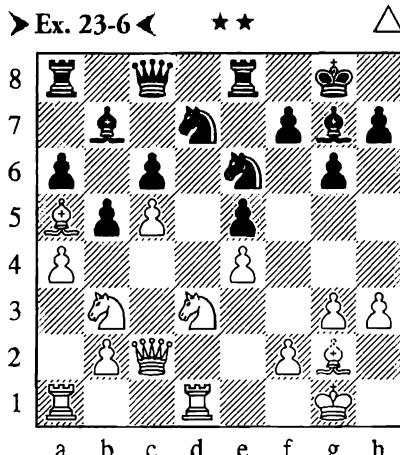

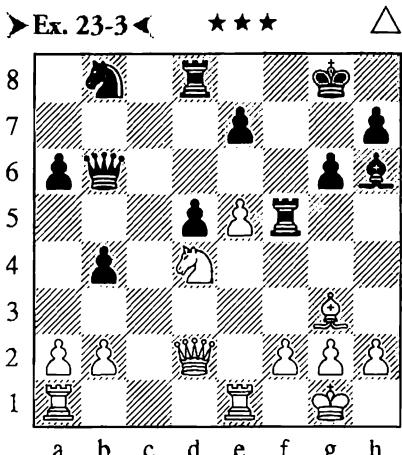

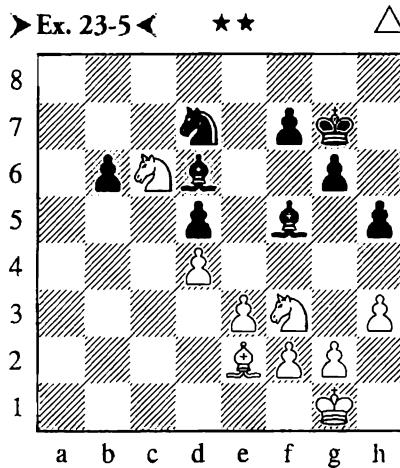

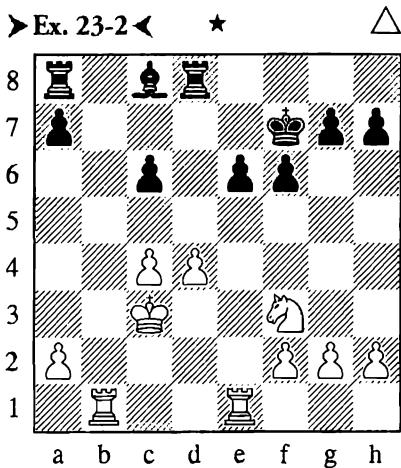

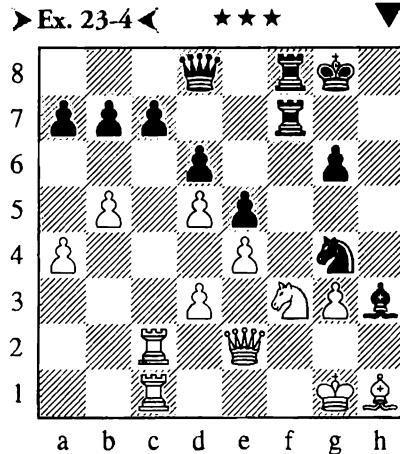

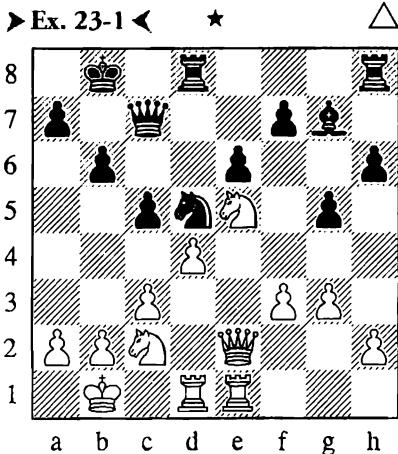

**9.Qe2 ♜xg1 10.Qxg1 ♜xb2!+**

With a clear advantage, because after 11.Qxb2 there comes Qc5† and then Qxc3.

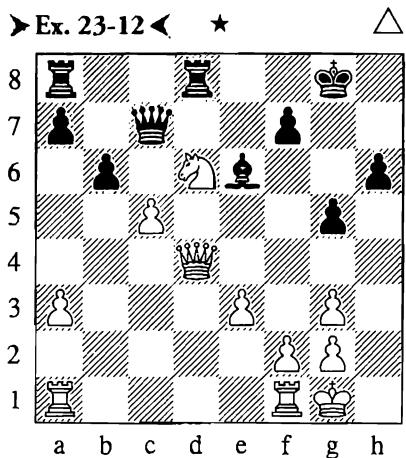

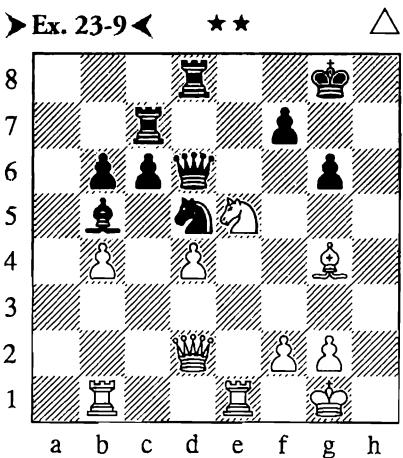

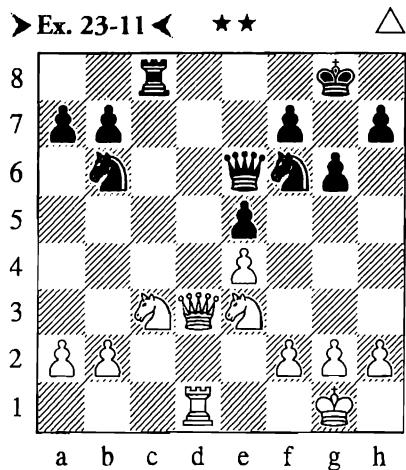

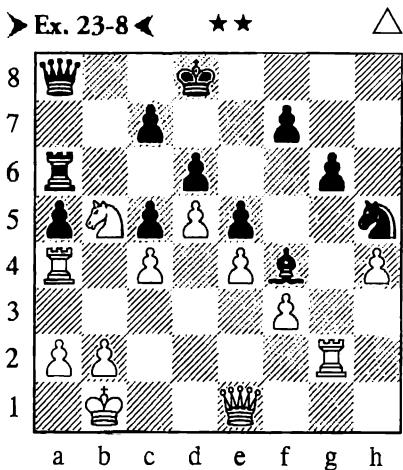

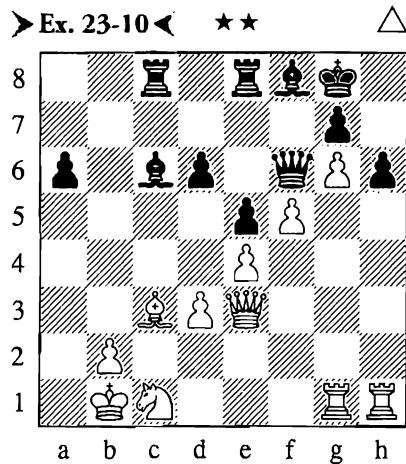

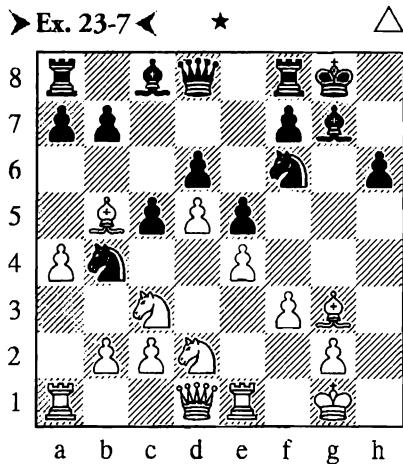

However, there was an even stronger line: 10...Qxa3! 11.Qxa3 Qxb4 and if 12.Qxa4, then 12...Qb6† 13.Qh1 Qxc3--.

In the following test, try to activate your pieces. In many positions **the principle of the worst placed piece** is very helpful. Look for a 'redundant' piece and find something useful for that piece to do.

## Pawn endings 2

In this chapter you will learn about a few more important ideas concerning pawn endings. Not only the activity of the king, but also the **pawn structure** plays a decisive role in the evaluation of the position.

This chapter is intended to help you to recognize and make use of some typical positional advantages and defensive ideas.

### Creating a passed pawn

The creation of a passed pawn is one of the most important goals in pawn endings.

Diagram 24-1

J.Speelman

1993

1...a6!

White already has a passed pawn. To keep the position level, Black must also create a passed pawn. Here there is a rule: **the potential passed pawn moves first!** So in this case the a-pawn must advance.

Let's look at the alternatives first:

a) The passive move 1... $\mathbb{Q}f6$  is still possible.  
2. $\mathbb{Q}d5$   $\mathbb{Q}f5$  3. $\mathbb{Q}d6$   $\mathbb{Q}xf4$  4. $\mathbb{Q}c7$   $\mathbb{Q}e5$  5. $\mathbb{Q}xb7$   $\mathbb{Q}d5$  6. $\mathbb{Q}xa7$   $\mathbb{Q}c4=$ .

b) 1...b6? is, on the other hand, a serious mistake. After 2.b5! the white pawn on b5 blocks both black pawns at the same time. 2... $\mathbb{Q}f6$  3.f5 (or 3. $\mathbb{Q}d5$   $\mathbb{Q}f5$  4. $\mathbb{Q}c6$   $\mathbb{Q}xf4$  5. $\mathbb{Q}b7$   $\mathbb{Q}e5$  6. $\mathbb{Q}xa7$   $\mathbb{Q}d6$  7. $\mathbb{Q}xb6+$ ); White has used his passed pawn as a deflection) 3... $\mathbb{Q}f7$  4. $\mathbb{Q}e5$   $\mathbb{Q}e7$  5.f6†  $\mathbb{Q}f7$  6. $\mathbb{Q}f5$   $\mathbb{Q}f8$  7. $\mathbb{Q}e6$   $\mathbb{Q}e8$  8.f7†  $\mathbb{Q}f8$  9. $\mathbb{Q}f6\#$  The black **king is in stalemate**. But since Black is still able to make pawn moves, he is lost. 9...a5 10.bxa6 b5 11.a7 b4 12.a8 $\mathbb{W}\#$

c) 1...b5? is of course also bad. There follows 2.f5† (but not 2. $\mathbb{Q}d4$   $\mathbb{Q}f5$  3. $\mathbb{Q}c5?$  3... $\mathbb{Q}xf4$  4. $\mathbb{Q}xb5$   $\mathbb{Q}e4$  5. $\mathbb{Q}a6$   $\mathbb{Q}d5$  6. $\mathbb{Q}xa7$   $\mathbb{Q}c4=$ ) 2... $\mathbb{Q}f6$  3. $\mathbb{Q}f4$   $\mathbb{Q}f7$  4. $\mathbb{Q}e5$   $\mathbb{Q}e7$  5.f6†  $\mathbb{Q}f7$  6. $\mathbb{Q}f5$   $\mathbb{Q}f8$  (if 6...a5, then 7.bxa5 b4 8. $\mathbb{Q}e4+$ ) 7. $\mathbb{Q}e6$   $\mathbb{Q}e8$  8.f7†  $\mathbb{Q}f8$  9. $\mathbb{Q}f6$  a5 (or 9...a6 10. $\mathbb{Q}e6+$ ) 10.bxa5 b4 11.a6 b3 12.a7 b2 13.a8 $\mathbb{W}\#$ .

After 1...a6 everything is much simpler:

2. $\mathbb{Q}f5†$   $\mathbb{Q}f6$  3. $\mathbb{Q}f4$  b6 4. $\mathbb{Q}e4$  a5 5.bxa5 bxa5=

### The protected passed pawn

A protected passed pawn is a big plus in any position. It is more or less the strongest of all passed pawns, since the opposing king cannot take it. Also the opponent's king cannot leave the square of the pawn, thus your king has a free hand. It is only in very rare cases that this advantage does not guarantee a win.

**Diagram 24-2**

**Y.Averbakh – E.Bebchuk**

Moscow 1964

Here White employs a breakthrough motif.

**1.e5! fxe5**

After this move Black will be unable to stop the white passed pawn. A more principled defence would be 1... $\mathbb{Q}d7$  2.e6†  $\mathbb{Q}d6$ . Although White has a protected passed pawn, he needs his reserve tempo to win the game: 3. $\mathbb{Q}c4$   $\mathbb{Q}c6$  4. $\mathbb{Q}b4$   $\mathbb{Q}d6$  (or 4...b6 5. $\mathbb{Q}c4$   $\mathbb{Q}d6$  6. $\mathbb{Q}b5$   $\mathbb{Q}c7$  7.h5○+— reserve tempo!) 5. $\mathbb{Q}b5$   $\mathbb{Q}c7$  6. $\mathbb{Q}c5$   $\mathbb{Q}d8$  7. $\mathbb{Q}b6$   $\mathbb{Q}c8$  8.h5○+—.

**2.g5 hxg5**

If 2... $\mathbb{Q}d6$  3.f6  $\mathbb{Q}e6$  4.fxg7  $\mathbb{Q}f7$  5.gxh6 b5, then 6. $\mathbb{Q}e4$  b4 7. $\mathbb{Q}d3!$ +— and the white king can still draw the teeth of both passed pawns in time!

**3.f6!+—**

Black resigned, in view of 3...gxf6 4.h5+— (analysis by Averbakh).

### The outside passed pawn

An outside passed pawn also normally promises us very good chances of a win. But other factors in the specific position must be correctly evaluated.

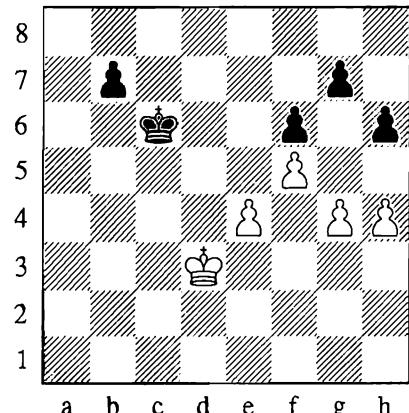

**Diagram 24-3**

**L.Hansen – A.Nimzowitsch**

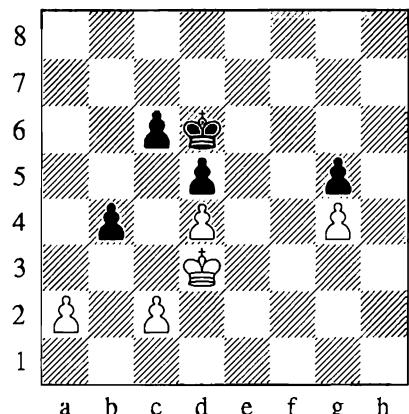

Denmark simultaneous

Here the pawn structure is very unbalanced. If White had the move, he could decide the struggle in his favour by playing 1.c3! to exchange off the strong b4-pawn and thus get an outside passed pawn. After 1...c5 2.dxc5†  $\mathbb{Q}xc5$  3.cxb4† or 1...bxcc3 2. $\mathbb{Q}xc3$  c5 3.dxc5†  $\mathbb{Q}xc5$  4.a4 White wins easily. But it is Black's move and he brings his king into play.

**Diagram 24-2**

**Diagram 24-3**

**1... $\mathbb{Q}c7!$  2.c3**

2.c4 is interesting, but even then White is lost: 2... $\mathbb{Q}b6$  3.cxd5 cxd5 4. $\mathbb{Q}c2$   $\mathbb{Q}a5!$  5. $\mathbb{Q}b2$  (5. $\mathbb{Q}b3$   $\mathbb{Q}b5\ominus$ ) 5... $\mathbb{Q}a4-$ +. Here we have corresponding squares: a4-b2; b5-b3; a5-c2.

**2... $\mathbb{Q}b6!$** 

But not 2...bxc3?? 3. $\mathbb{Q}xc3$   $\mathbb{Q}b6$  4. $\mathbb{Q}b4-$ +, because in such positions White wins with the method we already know, deflection. The outside passed pawn deflects the black king, the white king wins the other pawns and escorts the new passed pawn to its goal.

**3.cxb4**

After 3.c4 there comes 3... $\mathbb{Q}a6!$  (pay attention to the aforementioned corresponding squares!) 4.cxd5 cxd5 5. $\mathbb{Q}d2$  (or 5. $\mathbb{Q}c2$   $\mathbb{Q}a5\ominus$ ) 5... $\mathbb{Q}b5-$ +

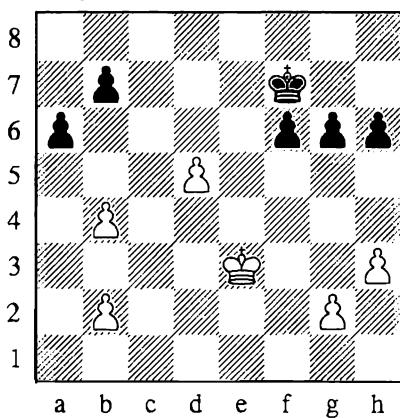

If 3. $\mathbb{Q}c2$ , then 3... $\mathbb{Q}b5$  4. $\mathbb{Q}b3$  bxc3 5. $\mathbb{Q}xc3$   $\mathbb{Q}a4$  6. $\mathbb{Q}b2$   $\mathbb{Q}b4-$ + ( $\times d4$ ).

**3... $\mathbb{Q}b5$  4. $\mathbb{Q}c3$   $\mathbb{Q}a4\ominus$ -+**

After winning the white b-pawn the black king will attack the d4-pawn, while still being able to get back into the square of the a-pawn in good time. Here it is the activity of the black king which does for the white passed pawn.

**0-1**

Some pawn endings are hard to evaluate. You have to immerse yourself rather deeply in the position in order to weigh up properly the various factors. For this, accurate calculation of variations is very important.

**Diagram 24-4****Diagram 24-4**

**M.Botvinnik – S.Flohr**

USSR Ch, Moscow 1944

**1.g4!**

White wants to play h4-h5, in order to seize the f5-square for his king.

**1... $\mathbb{Q}e7$** 

White's doubled pawns are not a problem; they defend his queenside well enough.

**2.h4  $\mathbb{Q}d6$  3. $\mathbb{Q}e4$** 

The board is too big for Black: without the two h-pawns the position would be won for Black! Then he would be able to create an outside passed pawn!

3...b6 4.h5 gxh5 5.gxh5

**Diagram 24-5**

The focus of the struggle is on the kingside. The central d-pawn plays the part of an outside passed pawn.

5...a5 6.Qf5+

Also good would be 6.bxa5 bxa5 7.b3 Qc5 8.Qf5 Qxd5 9.Qxf6 Qd4 10.Qg6 Qc3 11.Qxh6 Qxb3 12.Qg6 a4 13.h6 a3 14.h7 a2 15.h8Q+-.

10.b3

**Diagram 24-6**

In order to shut the white king in on the edge of the board, Black would here need two reserve tempi. But he only has one!

10...Qf7

Or 10...b5 11.Qh7 Qf7 12.h6#.

11.Qg5 Qg7 12.Qf5 Qh6 13.Qe5 Qxh5 14.Qd5 Qg5 15.Qc6 Qf5 16.Qxb6 Qe6 17.Qc5 Qd7 18.Qxb4 Qc6 19.Qa5+- Qb7 20.Qb5 Qa7 21.Qc6 Qa6 22.b4 Qa7 23.b5 Qb8 24.Qb6

### Connected passed pawns

The following example shows the strength of far-advanced, connected passed pawns.

**Diagram 24-7**

J.Behring

1.Qf3!

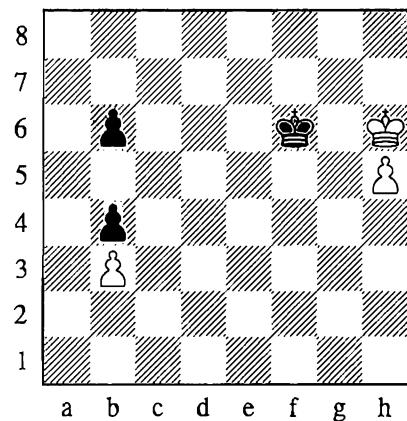

Here the white pawns are the more dangerous because they are farther forward and can be supported by the king.

1.Qe4? would be worse: 1...c5 2.Qd3 Qe8 3.Qc4 Qf7# and a position of mutual zugzwang has arisen.

(another 1 point)

2...Wxe6

2...Qe5! would be more stubborn: 3.Wxd6 Qxd6 4.Qg5± Qe6 5.Qxe6 fxe6 6.Bad1 Qe7 7.Qf7 Qc6 (7...b6 8.Qxh8 Qxh8 9.Qf7 Qg5 10.Qf8† Qg7 11.Qdf1!+) 8.Qd7 Eb8 9.Qxh8 Qxh8 10.Qf7±.

(1 bonus point if you saw the move 2...Qe5)

If 2...Wxd1?!, then 3.Qaxd1 Qc6 4.Qc7 Eb8 5.Qxf7† Qf8 6.Qb3† Qe7 7.Qf7#.

3.Wd8† Qf8 4.Qxf7! Qxf7 5.Wxc8

There is a quicker win: 5.Qf1†! Qg7 6.Qxe6 Qxe6 7.Wf6† Qh6 8.Qf4+–.

5...Wxc4 6.Wxc4† Qg7 7.Wd4† Qg8

8.Wd5† Qg7 9.Wxb7†+–

1–0

## F-23

Opening /Chapter 4

L.Prokes – O.Zander

Berlin 1925

## 1.0–0!

(1 point)

1...Qc6

After 1...Qxc4 comes 2.Eel†! Qe7 3.Wxg7! Ef8 4.Qh6+–.

(another 1 point for this variation)

2.Eel† Qe7

2...Qe7 is met by 3.Wxg7 Ef8 4.Qh6+–.

3.Qb3 f6 4.Wd5

Intending Qf4xd6.

4...g5 5.Qxg5+–

Also strong would be 5.Qf4!+– or 5.Qxg5!+–.

5...fxg5 6.Qxg5

Or 6.Wxg5+–.

6...h6 7.Qc3

Also good is 7.Qf4+–.

7...Ef7

If 7...hxg5, then 8.Qe4!+–.

8.Wg8 hxg5

8...Ef7 loses to 9.Qd5! Exg8 10.Qf6#.

9.Wxh7

1–0

## F-24

Tactics /Chapter 1

S.Alapin – E.Schiffers

St Petersburg 1902

1...Wxg3! 2.hxg3 Qg7!+–

(1 point)

White has no answer to the threat of Qh8#.

## Scoring

Maximum number of points is **40**

- |                                 |                    |
|---------------------------------|--------------------|
| <b>36</b> points and above..... | → <b>Excellent</b> |
| <b>30</b> points and above..... | → <b>Good</b>      |
| <b>20</b> points.....           | → <b>Pass mark</b> |

*If you scored less than **20** points, we recommend that you read again those chapter dealing with the areas where you made a lot of mistakes and repeat the exercises which you got wrong.*

**ARTUR YUSUPOV****BUILD UP YOUR CHESS**  
BEYOND THE BASICS

Artur Yusupov, from Germany, was ranked No. 3 in the world from 1986 to 1992, just behind the legendary Karpov and Kasparov. He has won everything there is to win in chess except for the World Championship. In recent years he has mainly worked as a chess trainer with players ranging from current World Champion Vishy Anand and many other top grandmasters, to talented juniors and local amateurs in Germany.

World Renowned teacher Artur Yusupov continues his complete course of chess improvement.

Volume 1, The Fundamentals, showed club chess players the basic ideas they should know.

Now Volume 2, Beyond the Basics, sets off on the road to mastery. Yusupov guides the reader towards a higher level of chess understanding using carefully selected positions and advice. This new understanding is then tested by a series of puzzles.
